City of Tustin
DEPARTMENT OF PUBLIC WORKS
300 CENTENNIAL WAY
TUSTIN, CA 92780

STANDARD PLANS
AND DESIGN STANDARDS
FOR PUBLIC WORKS CONSTRUCTION

2012 Edition

THIS EDITION SUPERSEDES ANY AND ALL PREVIOUS REVISIONS OF THE
STANDARD PLANS AND DESIGN STANDARDS FOR PUBLIC WORKS IMPROVEMENTS
CONSTRUCTED IN THE PUBLIC RIGHTS OF WAY OR IMPROVEMENTS TO BE
MAINTAINED BY PUBLIC FUNDS, WHICH WERE APPROVED ON JANUARY 19, 1981,
BY RESOLUTION NO. 81-4.

Prepared under the direct supervision of:
Dana R. Kasdan, P. E.
Engineering Services Manager
RCE No. 30559 – RTE No. 1202

By: Dana R. Kasdan 10/22/2012

Approved by:
Douglas S. Stack, P.E.
Director of Public Works / City Engineer
RCE No. 54637

By: Douglas S. Stack 10/23/2012

</table>
INTRODUCTION

All improvement work within the public right-of-way shall be conducted and completed in a manner and methodology that conforms to the standards of practice adopted by the City of Tustin. All materials, methods and manner for construction shall be in strict adherence to the applicable portions of these standards and the latest editions of the American Public Works Association/Associated General Contractors (APWA/AGC) Standard Specifications and Standard Plans for Public Works Construction (Greenbook), the latest edition of the American Water Works Association Standard Plans and associated specifications, and where appropriate, standard drawings from other local agencies such as the County of Orange and the Standard Drawings and Specifications of the California Department of Transportation (Caltrans).

Although these standard plans and specifications are provided to serve as guides and templates for design consistency as well as practical and efficient maintenance, they are by no means intended to replace or substitute good engineering practice on the part of the design engineer. These design standard plans may be called out on the plans by construction notes referring to this document. However, when the design engineer deems it necessary to deviate from, modify these standard plans, or substitute an approved standard drawing from another resource, the deviation, modification or substitution must be rendered on a detail sheet in the plan set with complete detailing, appropriate notes and specifications. The deviation, modification or substitution must be approved by the City Engineer prior to incorporating the design into the improvement plan layout. “Stick-on” or adhesive applications are not allowed on the original drawings. All archival drawings shall be prepared on 24-inch by 36-inch 0.4 mil film Mylar. Pre-formatted border and title block layout can be obtained from the city in digital CADD format. Standard drawings from the County of Orange, Caltrans, or other appropriate agencies may be acceptable for alternative designs, modified designs or substitutions with the prior approval of the City Engineer. The design engineer shall adhere to the project entitlement conditions and the specific standard plan requirements as stated in the conditions of approval as adopted by the city. The design engineer of record shall be responsible for all design elements shown on the approved drawings.

GENERAL NOTES

1. All work shall conform to these standards and to the latest edition of the APWA/AGC “Standard Specifications for Public Works Construction” and associated Standard Drawings (Greenbook) and supplements thereto, and where appropriate, the latest editions of the Highway Design Manual of the California Department of Transportation and the California Manual on Uniform Traffic Control Devices (CA MUTCD), the American Water Works Association (AWWA), the Irvine Ranch Water District (IRWD) Standards, the Orange County Sanitation District (OCSD), the Orange County Fire Authority (OCFA) Standards and Specifications, The County of Orange Standards for Street and Storm Drain Construction, the County of Orange Monumentation Policy, The Orange County Transportation Authority Standards, the Construction BMP Handbook of the California Stormwater Quality Association, and the American’s with Disabilities Act (ADA) Department of
Justice Standards for Accessible Design, unless specifically noted otherwise on these plans.

2. All work shall conform to the project conditions of approval and all city ordinances and applicable regulatory codes.

3. The contractor shall notify the Public Works Department at 714-573-3150 at least **48 hours** prior to beginning any work. Inspection hours shall be between 7:00 a.m. and 4:00 p.m. Monday through Friday, excluding holidays.

4. All work within the public right-of-way or within a publicly owned or maintained easement shall require an encroachment permit or “temporary right of entry” to be obtained from the Public Works Department prior to initiating any work.

5. The Contractor shall be responsible for providing all testing required by the City.

6. The Contractor shall maintain a signed set of approved construction plans and related documentation and a copy of the construction permit on the job site during working operations.

7. The Contractor shall have a designated “responsible party” or representative on the project site during all working operations.

8. All work shall comply with the stormwater runoff conditions and requirements in effect at the time of issuance of the permit for construction as required by the California Regional Water Quality Control Board and the City’s adopted Local Implementation Plan.

9. Working hours shall be as established and stated on the approved encroachment permit or “temporary right of entry” letter. These hours may be subject to modifications depending upon site conditions during construction as determined by the City Engineer or by limitations imposed by the approved traffic control plan.

10. The contractor shall restore or replace in kind all existing improvements disturbed during construction, including, but not limited to, street striping, traffic signal loops, landscaping and irrigation facilities, signage and markers.

11. All work performed shall be guaranteed for a minimum of one year from the date of acceptance by the City.

12. One-sack slurry backfill shall be used for all trench crossings of streets and all trenches within alley ways.

**TRAFFIC CONTROL AND SAFETY ELEMENTS**

1. All traffic control, temporary signage and striping, barricading and detouring shall be as depicted on the approved traffic control plan, and per the requirements of the California Manual on Uniform Traffic Control Devices (CA MUTCD). All layouts shall be reviewed by the project inspector for conformance with the approved plan.
2. No street shall be closed to traffic without written permission from the City Traffic Engineer, except when otherwise directed by law enforcement or fire officials.

3. The contractor shall make every effort to provide for smooth traffic flow and safety within and around his work zone and project limits. Access shall be maintained for all properties adjacent to the work.

4. Detouring operations for a period of six consecutive calendar days, or more, shall require the installation of temporary street striping and removal of interfering striping by sandblasting. The detour striping plan or construction traffic control plan must be submitted to the City Traffic Engineer for review and acceptance.

5. All traffic control devices shall be restored to their original condition at the end of the work to the satisfaction of the City Traffic Engineer.

6. Traffic control devices (TCD) shall remain visible and operational at all times.

**UTILITIES AND UNDERGROUND WORK**

1. All utility companies having facilities within the area of work shall be notified at least **48 hours** prior to beginning work.

2. All utility services shall be installed below water mains and appurtenances when possible with two feet minimum clearance where the lines cross. Utility conduits, laterals and services shall not be allowed within five feet of parallel water facilities. Separation of sewer, water and reclaimed water lines shall conform to State of California, Department of Health Standards and City Water Standards requirements.

3. All utility services shall be installed a minimum of 2-feet beyond the right-of-way line prior to paving of streets.

4. Water facilities and systems shall comply with City Water Division Standards and Specifications and shall be inspected by the Water Division Inspector.

5. All required water facilities, including fire hydrants and appurtenances, shall be accessible and fully operational prior to constructing any permanent structure using combustible materials.

6. All utility service lines shall have a location identity marking chiseled on the top of curb (i.e. “S” for sewer, “G” for gas, “W” for water).

7. All VCP shall be laid with mechanical joints, “Wedgelock”, “Speed Seal”, “Band Seal” or approved equal.

8. Sewer contractors shall furnish the City Engineer with the location of wyes and house connections as constructed. All sewer manhole frames and covers shall be left 6-inches below finished grade. The contractor shall raise the manhole and covers flush with the finished grade upon completion of surfacing.
9. Backfill of all trenches shall be compacted to a minimum relative compaction of 90% in the upper three feet, measured from the pavement surface, or from finished grade where there is no pavement. Compaction shall be verified by a soils report prepared by a registered civil engineer or geotechnical engineer.

10. Trench resurfacing shall be completed as soon as possible, but no later than five working days after subgrade compaction has been completed.

11. All utilities shall be bored under arterial highways unless otherwise approved by the City Engineer.

12. No street shall be open-cut if paved or sealed within the previous five years, except for emergency repairs or as deemed necessary by the City Engineer. Such open cuts shall be cold planed and repaved with an asphalt concrete (AC) overlay to the limits required by the City Engineer.

13. All slurry sealed streets shall have the existing raised markers replaced in kind.

STREET IMPROVEMENTS

STD. PLAN SECTION NO. 100

1. All streets shall have a minimum pavement section as determined by “R” value and traffic index study based on a 20-year life. A minimum 5” AC over a minimum of 6” aggregate base (AB) is required, even if the study indicates a lesser section is adequate. The minimum traffic index (TI) shall be 5.

2. Street improvements shall be constructed to the vertical and horizontal dimensions shown in these standard drawings, and as required by the conditions of approval. Street widths shall be measured from the top of curb.

3. The maximum length of residential cul-de-sac streets shall be 500’, as measured along the centerline of the cul-de-sac street, from the nearest intersecting street centerline to the cul-de-sac radius point.

4. The maximum length of industrial and commercial cul-de-sac streets shall be 1000’, as measured along the centerline of the cul-de-sac street, from the nearest intersecting street centerline to the cul-de-sac radius point.

STREET IMPROVEMENT DETAILS

STD. PLAN SECTION NO. 200

1. All street curb and gutter improvements shall be monolithic construction. The type shall be as specified by the City Engineer. All new curbs and gutters shall be constructed with a minimum grade of 0.50%. Any deviation from this minimum grade requirement will require the approval of the City Engineer.
2. Cross gutters are not permitted. However, there may be physical constraints which justify their installation, subject to approval by the City Engineer.

3. All streets shall have concrete sidewalks that conform with all the requirements of an ADA accessible pathway. Accessibility ramps shall be required at all intersections in full conformance with the latest edition of the ADA Standards for Accessible Design. In areas with expansive soil, the ground shall be presaturated for three (3) consecutive days, unless otherwise directed by the City Engineer. Prior to placing concrete, the subgrade shall be tested to a depth of 18” to assure a minimum optimum moisture content of 125% is achieved.

4. Driveway aprons shall be constructed per the applicable conditions of approval for the project, and as required to meet the access conditions depending on type of development or as specified by the City Engineer.

STORM DRAINS, FLOOD CONTROL AND WATER QUALITY

STD. PLAN SECTION NO. 300

1. Streets, roads, highways and freeways of 5,000 square feet or more of paved surface shall incorporate principles contained in the US EPA guidance document: “Managing Wet Weather with Green Infrastructure: Green Streets” in a manner consistent with the maximum extent practicable standard. This category includes any paved surface used for the transportation of automobiles, trucks, motorcycles and other vehicles and excludes any routine road maintenance activities where the footprint is not changed.

2. The California Stormwater Quality Association (CASQA) BMP Handbook should be used as a general reference and starting point for selecting the appropriate BMP.

3. Onsite stormwater conveyance systems shall be designed and constructed per these standards and the design criteria of the latest requirements of the Drainage Area Management Plan (DAMP) and the City of Tustin Local Implementation Plan (LIP). Storm water flows conveyed to a public street shall be directed to the public storm drain system and shall not flow into any adjoining property or development. All projects shall comply with the current State Water Resources Control Board (SWRCB) Construction General Permit and the City of Tustin Municipal General Permit requirements.

4. Storm drains shall also be constructed within or adjacent to the development as called for in the “Master Plan of Drainage, El Modena - Irvine Area” dated November 1969, or in the Run-off Management Plan for Tustin Legacy dated December 2004, or other applicable City approved drainage plans.

5. All storm drains shall be designed per the parameters outlined in the latest edition of the Orange County Flood Control District “Hydrology Manual” and as required by
the City Engineer. A hydrology study shall be submitted for approval by the City Engineer.

Collection systems shall be designed for a minimum 10-year storm frequency except in sump conditions where a 25-year storm frequency shall be used. Major drains and channels shall be designed based on a 25-year storm frequency. Drainage facilities shall be designed for open channel hydraulics, unless otherwise approved by the City Engineer.

6. System designs that require facilities or conveyance devices not found within these standards shall refer to the latest edition of the County of Orange Standard for Storm Drain Construction or latest edition of the American Public Works Association (APWA) Standards, as approved by the City Engineer.

7. A “Nuisance Water” drainage system shall be constructed in all developments and shall connect to the storm drain system. The nuisance water drainage system shall be designed to collect low flows only and not peak storm flows. Required pipe size for nuisance water systems shall be a minimum of 12” diameter. Inlets shall be type OS per Standard No. 301.

Storm and nuisance waters will not be allowed to be channeled in street gutters for any accumulative distance in excess of 1000’. In addition, no surface water flows will be allowed to drain across any public pedestrian way.

8. A standard junction structure with manhole shall be constructed at all intersections of storm drain lines.

9. A standard access manhole shall be constructed at all major changes in grade or alignment of the pipe and at intervals of not more than 300’ for 36” diameter pipe and below. Larger pipes may have manholes located at intervals greater than 300’ but not more than 500’, unless otherwise approved by the City Engineer.

10. Reinforced concrete pipe (RCP) shall be used for all drainage systems unless otherwise approved by the City Engineer. RCP shall be of the class or D load necessary to support the load imposed on the line.

11. Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING - DRAINS TO OCEAN” and/or other graphical icons to discourage illegal dumping.

12. The minimum pipe size for storm drain systems, including catch basin leads, shall be 24” diameter unless otherwise approved by the City Engineer.

13. The minimum cover on all storm drain pipes shall be at least 42” below finished surface. Pipe bedding material shall be 4” minimum of ¾” crushed rock and the remainder backfilled to 12” above the pipe with imported sand having a minimum Sand Equivalent (SE) of 30. All backfill material up to subgrade shall be
compacted to a minimum 90% relative density and material above subgrade shall be compacted to a minimum 95% relative density. Compaction tests shall be performed by a City approved Lab utilizing California Test Method Nos. 216 & 231. One sack slurry may be required above the pipe zone.

14. Once storm water runoff enters a storm drain system it may not outlet to a City street or across any accessible pedestrian pathway.

15. Upon completion of the storm drain system the pipe shall be documented by digital video by a closed circuit camera (CCTV) by the contractor at no expense to the City. The final video shall be provided to the City on DVD for review and records.

TRAFFIC

STD. PLAN SECTION NO. 500

1. Street name signs shall be erected at all intersections, per City Standard No. 503, and at all locations designated by the City Engineer and as shown in City Standard Nos. 503, 504, 506 and 507.

2. Traffic control signing and marking shall include intersection stop signs, speed limit signs, parking restriction signs, miscellaneous traffic control signs and traffic striping and legends. Said signing and marking shall be per the California Manual on Uniform Traffic Control Devices (CA MUTCD), latest edition, and City Standards and shall be erected where designated by the City Engineer. Traffic striping and painted legends shall be installed prior to opening streets for public use.

3. New traffic signals will be required as determined by a traffic study of traffic warrants or predicted traffic warrants. If the configuration, geometrics or traffic patterns created by a new development creates an impact deemed significant as determined by an approved traffic study and requires modification of an existing traffic signal, such modification shall be the responsibility of the developer.

4. New traffic signal controller cabinets shall be located at least 30 feet from the BCR/ECR, or as otherwise approved by the City Engineer.

5. Geometric Design, including Intersection Design shall be per the latest edition of the Highway Design Manual of the California Department of Transportation (Caltrans).
NOTE: This Section is applicable to the Tustin Water Service Area. Portions of the City that are within the Irvine Ranch Water District (IRWD) must adhere to IRWD Standards.

1. Water mains and appurtenant structures shall be installed to provide domestic water service and fire protection to all lots in a tract, all parcels of a parcel map or to any new development.

2. Curb and gutter shall be constructed prior to installation of the water system, unless full horizontal and vertical control survey staking is provided for construction of the water system. Such staking shall provide for the alignment, cuts, location of all services and meters, gate valves, fire hydrants and other appurtenances required by the City Engineer.

3. All domestic water systems shall conform with and shall be installed in accordance with the latest edition of the American Water Works Association (AWWA) Standards and City of Tustin Standard Plans and Design Standards as applicable.

4. All water mains shall be sized to provide fire flow per the latest Orange County Fire Authority (OCFA) requirements, standards and specifications.

5. Fire hydrants shall be installed on all water mains at intervals no greater than 500' in single family residential areas and no greater than 300' in industrial, commercial and high density residential areas as required by the OCFA.

6. Fire protection lines and fire hydrants will be required on-site as required by the OCFA. Onsite fire protection systems shall be connected to the public water system via a Double Check Detector Assembly as shown on standard drawing 1101.

7. Each fire hydrant shall have at least one (1) 2 ½" and one (1) 4" hose connection as required by the OCFA. The 4" connection shall be directed to the street. They shall be located a minimum distance of five (5) feet from a driveway apron or any vertical obstruction such as a street light.

8. Fire hydrants shall be wet barrel James-Jones or approved equal installed on a 6" riser or larger as required to meet the fire flow demand specified by the OCFA.

9. All hydrants shall be connected to the main with 6" or larger C900 PVC pipe (class 200 minimum) or Ductile Iron Pipe (DIP) equivalent to class 200 minimum as required by the OCFA. Each fire hydrant lead shall have a gate valve matched to the associated pipe size installed on the lead near the main.
10. All hydrants, exposed pipe, flanges and bolts shall be painted with two coats of school bus yellow permo-enamel.

11. All water mains shall be C900 PVC pipe (class 200 minimum) or Ductile Iron Pipe (DIP) class as required, and as required and approved by the City Engineer, and shall be installed in accordance with the latest edition of the AWWA Standards.

12. The minimum cover on all water mains shall be at least 36" below finished earth grade or finished pavement grade on local streets and at least 42" below finished pavement grade on arterial streets. Backfill shall be imported sand having a minimum Sand Equivalent (SE) of 30 and shall be compacted to a minimum 90% relative density and material above subgrade shall be compacted to a minimum 95% relative density. Compaction tests shall be performed by a City approved Lab utilizing California Test Method Nos. 216 & 231. One sack slurry may be required above the pipe zone.

13. Dead-end lines will not be permitted except in unusual cases where loop connections are not possible. Dead-end lines shall only be shown on improvement plans submitted for checking after each specific case has been discussed with the City Engineer and tentative approval has been received. A 2” minimum blow-off assembly will be required at the dead-end.

14. All valves, fittings, hydrants and appurtenant structures shall be thrust blocked with concrete to the satisfaction of the City Engineer and in accordance with the latest edition of the AWWA standards.

15. All gate valves shall be AWWA & Underwriters Laboratories Factory Mutual (ULFM) tested, resilient wedge, with 2” spare operating nuts. Gate valves shall be M&H or an approved equal. Each gate valve shall have a Brooks 4-TT valve box with an 8” schedule 40 PVC riser or approved equal.

16. All valves, hydrants and fittings shall be cement lined or epoxy lined, and shall be approved by the City Engineer prior to delivery on the job. All fittings shall be short pattern and wrapped in 8 mil polyethylene. All nuts and bolts shall be type 316 stainless steel (SS).

17. The location of each water service house connection shall be shown on the improvement plans.

18. House connections shall be 1” copper type “K” soft. Single residential service connections shall be a minimum of 1” diameter. Commercial, industrial or multi-family residential connections shall be sized as required or as directed by the City Engineer. Services and meters shall be sized per latest edition of Uniform Plumbing Code fixtures unit count schedule.

19. All domestic water mains located on private property shall be located in a minimum ten (10) foot wide easement dedicated to the City, and shall be located at least five (5) feet from any structure, tree or large shrub.
20. All water mains shall be pressure tested to a minimum 200 psi for four (4) hours, after compaction test has passed, in accordance with the procedures outlined in the latest edition of the AWWA Standards.

21. After the pressure test is successfully passed, all water mains shall be chlorinated (50 ppm) and flushed by the installer and shall pass a bacteria test conducted by the City. Residual chlorine shall be neutralized (<0.1 ppm) prior to discharge to the public storm drain system.

22. All Ductile Iron Pipe (DIP) shall be bagged with 8 mil polyethylene.

23. All pipes and fittings shall conform to NSF International / American National Standards Institute (NSF/ANSI) Standard 61, Annex G.

LANDSCAPING

STD. PLAN SECTION NOS. 2000, 2100 & 2200

1. The developer shall pay a parkway tree planting fee as prescribed by the City. Said fee shall cover the cost of the City furnishing and planting the trees and maintaining them for one year. Alternatively, the City may direct the developer to furnish and install the parkway trees, at their expense, per City standards.

2. The fee per parkway tree shall be based on a minimum tree spacing of 50’ on center in industrial, commercial and multiple family developments and at least one parkway tree per lot for single family residential developments.

STREET LIGHTING

1. All developments shall have a street lighting system installed on “marbleite” poles served by underground conduit. Said street lighting system shall be installed per these minimum design standards and the standards of the City of Tustin and the Southern California Edison Company, or as approved by the City Engineer.

2. The following lighting systems for the various classes of streets are to be used as minimum requirements for adequate street lighting. The City Engineer may, where deemed necessary, modify these requirements. These systems may be varied to fit local conditions to the extent that the minimum average lumens per square foot of street surface thus derived is not less than the amount attained using the following systems for each street classification:

a. Local Single Family Residential Streets, with development on one side of the street: 5,800 lumen high pressure sodium vapor lamps, with 22’ mounting height on 6’ arms spaced at 200 feet along one side of the street.
b. Local Single Family and Multiple Family Residential Streets and Residential Collector Type Streets: 5,800 lumen high pressure sodium vapor lamps with 28' mounting height on 6’ arms spaced 400 feet apart along both sides of the street. (The lights are to be staggered from side to side along the street, thus the spacing between lights is 200 feet.)

c. Commercial and Industrial Local Streets: 9,500 lumen high pressure sodium vapor lamps with 30’ mounting height on 8’ arms spaced at 240’ apart along both sides of the street. (The lights are to be staggered from side to side along the street, thus the spacing between lights is 120 feet.)

d. Commercial and Industrial Collector Streets and Secondary Arterial Highways: 16,000 lumen high pressure sodium vapor lamps with 30’ mounting height on 8’ arms, spaced at 240’ along both sides of the street. (The lights are to be staggered from side to side along the street, thus spacing between lights is 120 feet.)

e. Major and Primary Arterial Highways shall receive special design consideration to provide a minimum average lumens per square foot of illuminated surface or average foot candles of 1.5 as defined in the latest edition of the “American National Standards Institute for Roadway Lighting” (Recommended Practice RP – 8, 2010 Edition) as adopted by the American National Standards Institute and the Illuminating Engineering Society of North America. Use the spacing exhibits of RP-8 for the applicable street widths.

f. Street intersections shall receive special consideration to the extent that at least one light standard shall be placed at each street intersection. However, at intersections where crosswalks are likely to be established, at least two light standards shall be required and placed in such locations as to effectively illuminate the crosswalks.

g. The following situations shall also receive special consideration to the extent that additional lighting will be required:

Railroad grade crossings, alleys, bridges, overpasses, viaducts, plazas or traffic circles, underpasses, tunnels, highway interchanges and other specially designated locations.

h. Luminaires and lamps shall be approved by the City Engineer.

SURVEY MONUMENTATION

1. All street intersections, center lines, beginning of curves, end of curves, tract boundaries and all intersection points, where they fall within a street right-of-way shall be marked, with an approved type of survey marker manufactured for such purpose, after installation of the final pavement surface.
2. Such survey markers shall be installed to leaded and tagged drill holes placed in the curb or sidewalk. Such reference distances or ties shall be turned into the office of the City Engineer. Said ties shall be neatly drafted on 8½” x 11” sheets.

3. Installation, establishment and documentation of survey monuments shall conform to the requirements of the latest version of the County of Orange Monumentation Policy, as well as all applicable State, County and local requirements.

SANITARY SEWERS

The City requires that sanitary sewer design and construction conform to the current standards as applicable (the Orange County Sanitation District or the Irvine Ranch Water District).

AVOIDING PLAN REVIEW DELAYS

The City of Tustin has made expedited plan review and project delivery not the exception to the rule but a priority in our commitment to serve you better. However, each individual applicant is the most important part of that commitment.

Most people do not realize how much control they really have over the plan review process. The best way to stay in control of that process is to avoid the common pitfalls that lead to prolonged plan reviews and extended delays in processing. Here are some suggestions to help you avoid these pitfalls:

1. Avoid incomplete or partial submittals. This problem can arise when applicants are under pressure to meet competing deadlines. To avoid additional plan reviews, make sure the design submittal is complete. The initial screening at the City of Tustin may not identify certain missing items needed for a complete plan review. If the plan reviewer/processor discovers that significant items are missing, unless otherwise waived or directed by the City Engineer, checking and processing of the project may be interrupted and the submittal package returned to the applicant. Partial submittals (such as a map without accompanying plans) will not be reviewed until all materials are received.

2. Make sure all plan check comments are addressed. Make sure that you are clear on what the plan reviewer is requesting. When significant questions arise over the intent of the reviewer’s comments, call the City plan reviewer and get clarification of the comments. Or, arrange for a conference with the plan reviewer to go over the submittal comments in detail.

3. Avoid major changes in design. When major changes in the design concept occur after the initial or first review, it can be a source of delay and extra review time for the reviewer. If major changes must be made, arrange to meet with City staff, especially the plan reviewer, to discuss the changes. Take the time to highlight the changes and go over them with the City plan reviewer when the plans
are resubmitted. This will avoid any conflicts between other design or mapping elements and can allow them to be caught early in the process. If major changes must be made, arrange to meet with City staff and the plan reviewer to avoid confusion and inconsistency later.

4. **Do not submit your plans too early.** Occasionally applicants will "jump the gun" by making submittals before receiving entitlement approvals by the legislative body (Planning Commission, for example). To avoid causing a delay in your processing, make sure that a copy of all the project’s Resolutions of Approval, or "project conditions of approval", accompany the application submittals.

5. **Avoid inconsistent design references.** This refers to civil plans which reference other plans prepared by other disciplines (such as architects) for details. Many times the details referenced on other plans do not match the design or existing conditions, City standards or specifications, or the dimensions and stationing may not match up. Avoid references to other plans when possible and show the needed details on the construction plan set.

6. **Adhere to City formats and guidelines.** There are published standards and guidelines for the preparation and documentation of improvement plans. Make good use of them in your plan set. When your design is not per standard, provide a special detail that modifies or refines the published standard to fit the design condition.

CADD FILENAME: T5-503A.DWG
NOTES:

1. EXACT LOCATION OF STREET NAME SIGNS TO BE SHOWN ON IMPROVEMENT PLANS. SEE SHEET 3 OF 3 FOR PLACEMENT CRITERIA.

2. ALUMINUM ALLOY FOR ALL COMPONENTS SHALL CONFORM TO SPECIFICATIONS PUBLISHED BY THE ALUMINUM ASSOCIATION.
   A. ½” X 15” CADMIUM OR ZINC PLATED CARRIAGE BOLT.
   B. ORNAMENTAL TOP AND CENTER CROSS SADDLE OF ANODIZED ALUMINUM ALLOY 5052H32, 0.075 INCHES THICK OR CAST ANODIZED ALUMINUM CASTING ALLOY A356T6.
   C. CAST ANODIZED ALUMINUM CASTING ALLOY A356T6 POST CAP 2” OR 2½” WITH THREE (3) 3/8” STAINLESS STEEL SET SCREWS.

SIZE:

LENGTH OF SIGN MAY BE 24” OR 30”, WIDTH 9” DEPTH 3/4” AND THICKNESS 0.090”.

FINISH:

SIGN FACES SHALL BE RETROREFLECTIVE OR ILLUMINATED TO SHOW THE SAME SHAPE AND SIMILAR COLOR BOTH DAY AND NIGHT. THE LEGEND AND BACKGROUND SHALL BE OF CONTRASTING COLORS. THE FINISH SHALL COMPLY WITH LATEST VERSION OF CA MUTCD.

LETTERING:

STREET NAMES SHALL BE 6” HIGH. THE LETTERS SHALL BE OF THE TYPE AND STYLE CONFORMING WITH THE DEPARTMENT OF TRANSPORTATION’S CALIFORNIA SIGN SPECIFICATIONS AND LATEST VERSION OF CA MUTCD.

DESIGN:

EACH FOUR-WAY UNIT SHALL CONSIST OF TWO DOUBLE FACE SIGNS WITH STREET NAME, MOUNTED AT RIGHT ANGLES WITH CENTER ROD ASSEMBLY. EACH SIGN SHALL BE MADE FROM ONE PIECE OF ALUMINUM EXTRUSION.

BRACKET ASSEMBLY:

THE POST CAP, ORNAMENT AND CENTER ROD ASSEMBLY SHALL BE MADE TO MOUNT ON 2½” I.D. GALVANIZED PIPE. THE CENTER ROD SHALL BE A ½” CADMIUM OR ZINC PLATED CARRIAGE BOLT, 0.0002 INCH MINIMUM. HEAD OF BOLT SHALL FORM TOP OF ORNAMENT. BOLT SHALL EXTEND THROUGH SIGNS AND FASTEN WITH NUT INSIDE OF POST CAP. POST CAP SHALL BE CAST ANODIZED ALUMINUM, DEEPLY GROOVED TO SECURELY HOLD SIGN FROM TWISTING, AND SHALL BE SECURED TO THE PIPE WITH THREE (3) ½” ALLEN HEAD SET SCREWS. SADDLE SHALL BE ANODIZED ALUMINUM ALLOY 5052H32, 0.075 INCHES THICK.
LEGEND

● = TWO 9” SIGNS

NOTES:

1. STREET NAME SIGNS SHALL BE PLACED AT THE NEAR RIGHT APPROACH OF MAJOR TRAFFIC FLOW.

2. ONE SIGN SHALL BE PLACED AT THE INTERSECTION OF TWO LOCAL STREETS.

3. TWO SIGNS SHALL BE PLACED AT THE INTERSECTION OF AN ARTERIAL STREET WITH A LOCAL STREET.

4. FOUR SIGNS SHALL BE PLACED AT A NON-SIGNALIZED INTERSECTION OF TWO ARTERIAL STREETS. SIGNS SHALL NOT BE INSTALLED AT SIGNALIZED INTERSECTIONS WITH INTERNALLY ILLUMINATED STREET NAME SIGNS.

STREET NAME SIGN PLACEMENT

2012 EDITION
**SHOULDER LOCATIONS**

*SEE NOTE 2.

**PARKWAY LOCATIONS**

**NOTES:**

1. SEE SHOULDER AND PARKWAY LOCATION DETAILS FOR STANDARD MOUNTING HEIGHTS. EXCEPTIONS SHOULD BE MADE TO AVOID SIGHT RESTRICTIONS OR UNDESIRABLE CONDITIONS, AT THE DIRECTION OF THE ENGINEER.

2. WHEN SUPPLEMENTAL PLATE IS USED, THE 4' MOUNTING HEIGHT SHALL SUPERCEDE THE 5' MOUNTING HEIGHT AT SHOULDER LOCATIONS.

3. PARKWAY AND SHOULDER SIGNS HAVING A HORIZONTAL WIDTH OF 48" OR GREATER SHALL BE DUAL-POST MOUNTED. SIGNS LESS THAN 48" IN WIDTH SHALL BE MOUNTED ON A SINGLE POSTS. POST(S) SHALL BE GALVANIZED STEEL, EASY ERECT BREAKAWAY, OR SQUARE STEEL TUBING WITH BREAKAWAY BASE, "QUICKPUNCH", "UNISTRUT", OR APPROVED EQUAL, EXCEPT WHEN MOUNTED ON SAME POST AS STREET NAME SIGN.

4. SIZING OF R1 ("STOP") SIGNS:
   - 24" – LOCAL TO LOCAL INTERSECTION WITH LOW APPROACH SPEED AND GOOD VISIBILITY
   - 30" – STANDARD SIZE.
   - 36" – WHERE THE APPROACH WIDTH IS GREATER THAN 30'. DUAL SIGNS SHALL BE USED WHERE THERE IS A RAISED MEDIAN AND APPROACH WIDTH IS GREATER THAN 30'.
   - 48" – WHERE THE ENGINEER DETERMINES THERE IS A DEMONSTRATED OR POTENTIAL ACCIDENT PROBLEM.

5. **8’ MINIMUM IF DESIGNATED BIKE TRAIL.**
NOTES:

1. SQUARE PERFORATED STEEL TUBE POSTS WITH BREAK–AWAY BASE. "TELESPAR", "QUICKPUNCH", OR "UNISTRUT", OR APPROVED BY CITY ENGINEER EQUAL, SHALL BE USED FOR ALL TRAFFIC CONTROL AND INFORMATIONAL SIGNS WITHIN ROAD RIGHT–OF–WAY, WITH THE EXCEPTION OF STREET NAME SIGNS PER CITY STANDARD PLAN NO. 503.

2. THE NUMBER OF POSTS REQUIRED FOR SIGN INSTALLATION SHALL BE DETERMINED BY THE AREA OF THE SIGN OR COMBINATION OF SIGNS TO BE INSTALLED. A SINGLE POST SHALL BE USED WHERE BOTH THE LENGTH AND WIDTH ARE LESS THAN 48”, WITH THE EXCEPTION OF A 48” x 48” STOP SIGN. DOUBLE POSTS SHALL BE USED WHERE EITHER THE LENGTH OR THE WIDTH EXCEEDS 48”.

3. THE ANCHOR ASSEMBLY SHALL CONSIST OF A 2” SQUARE BY 2’–6” ANCHOR POST AND A 2 1/4” SQUARE BY 1’–6” ANCHOR SLEEVE.

4. THE ANCHOR ASSEMBLY, CONSISTING OF THE ANCHOR POST AND ANCHOR SLEEVE, SHALL BE Driven SIMULTANEOUSLY UNTIL ONLY 1” TO 2” REMAINS ABOVE GROUND LEVEL. THE TOPS OF BOTH PIECES SHALL BE FLUSH.

5. ALL DIRT SHALL BE REMOVED FROM THE INSIDE TOP 8” OF THE ANCHOR ASSEMBLY TO ALLOW FOR INSTALLATION OF THE SIGN POST.

6. INSTALL THE 1 3/4” SQUARE SIGN POST 6” TO 8” INTO THE ANCHOR ASSEMBLY AND SECURE IN PLACE WITH TWO 5/16” UNIVERSAL HEAD DRIVE RIVETS AS SHOWN. THE RIVETS SHALL BE INSTALLED ON THE SIDE OPPOSITE TRAFFIC FLOW AND THE SIDE AWAY FROM TRAFFIC AS SHOWN IN ORDER TO ACHIEVE THE MAXIMUM BREAK–AWAY EFFECT.

7. INSTALLATION ACCORDING TO THESE REQUIREMENTS IS ESSENTIAL TO MAINTAIN THE BREAK–AWAY CHARACTERISTICS OF THE POST SYSTEM. UNDER NO CIRCUMSTANCES SHALL THE ANCHOR ASSEMBLY BE SECURED IN CONCRETE FOOTINGS.

NO SCALE
NOTE:
SEE THE LATEST CA MUTCD FOR SIGN SPECIFICATIONS AND DETAILS. SIGNS SHALL BE STANDARD SIZE UNLESS OTHERWISE NOTED. R4-7, R6-1, W1-7 AND TYPE N-1(CA) (OM1-3) SIGN FACES SHALL BE RETROREFLECTIVE TO SHOW THE SAME SHAPE AND SIMILAR COLOR BOTH DAY AND NIGHT. THE LEGEND AND BACKGROUND SHALL BE OF CONTRASTING COLORS. THE FINISH SHALL COMPLY WITH LATEST VERSION OF CA MUTCD. POSTS SHALL BE SQUARE GALVANIZED STEEL TUBING WITH BREAKAWAY BASE, "TELESPAR", "QUICKPUNCH", OR "UNISTRUT", OR APPROVED EQUAL. (SEE STD. NO. 505)

NOTES:

1. PAINT MEDIAN NOSE WITH HIGH REFLECTIVITY PREMIXED WHITE TRAFFIC PAINT.

2. INSTALL YELLOW REFLECTIVE PAVEMENT MARKERS ON PAVEMENT SURFACE IN FRONT OF MEDIAN CURB NOSE AT MINIMUM 2’ CENTER TO CENTER SPACING (MINIMUM 5 MARKERS). PLACE REFLECTIVE SURFACE OF MARKERS PARALLEL TO Q OF INTERSECTING ROADWAY.
NOTES:

1. PAINT DOUBLE YELLOW STRIPIING FROM MEDIAN NOSE TO BACK OF CROSSWALK OR TO $\triangle/2$ IF NO CROSSWALK.

2. FOR CROSSWALK DETAILS, SEE STANDARD PLAN NO. 509.
NOTE:
R.P.M.'S ARE OFFSET ON OPPOSITE SIDES OF CROSSWALK.

2 WAY R.P.M.'S (TYP.), SEE NOTE 3.

NOTES:

1. STANDARD 10' CROSSWALKS CONSISTS OF TWO PARALLEL 12-INCH WIDE WHITE LINES (YELLOW FOR SCHOOL DESIGNATED CROSSWALK).

2. LADDER BARS SHOULD BE USED ONLY WHERE ADDED VISIBILITY IS NEEDED SUCH AS AT SCHOOL ZONES, MIDBLOCK, OR AN UNCONTROLLED INTERSECTION AS DETERMINED BY THE CITY ENGINEER.

3. TWO WAY REFLECTIVE RAISED PAVEMENT MARKERS (R.P.M.) MAY BE USED TO SUPPLEMENT LADDER BAR STRIPES WHERE ADDITIONAL VISIBILITY IS NEEDED, AS DETERMINED BY THE CITY ENGINEER. USE CLEAR TYPE 'B' R.P.M.'S FOR A WHITE CROSSWALK, AND YELLOW TYPE 'D' R.P.M.'S FOR A YELLOW CROSSWALK.

4. INTENT OF LONGITUDINAL SPACING OF LADDER BARS IS TO PLACE THEM ALONG LANE LINES AND IN THE CENTER OF LANES TO AVOID VEHICLE WHEEL PATHS. LADDER BARS SHALL BE CONTINUED ACROSS THE ENTIRE ROADWAY WIDTH, WITH THE LAST FULL BAR (NO PARTIAL BARS) AT LEAST 2' FROM THE CURB FACE.

5. AT SKEWED INTERSECTIONS, THE LADDER BAR SHALL BE PARALLEL TO THE LANE LINES, NOT PERPENDICULAR TO THE CROSSWALK LINES.
TYPICAL TWO-WAY ROADWAY TREATMENT

TYPE A

INSTALL CALTRANS STANDARD DETAIL 21 OR 22 AS APPROVED BY THE CITY ENGINEER.

FURNISH AND INSTALL 1" TYPE "K" SOFT COPPER

FURNISH AND INSTALL 1" BRONZE MIP CORP. STOP, JONES J-41 WITH J-2607 BRONZE COMPRESSION CONNECTION OR APPROVED EQUAL.

ON ACP OR DIP WATER MAIN FURNISH AND INSTALL DOUBLE STRAP BRONZE SADDLE WITH IP THREADS, JONES J-979 OR APPROVED EQUAL. ON C-900 WATER MAIN FURNISH AND INSTALL DOUBLE STRAP BRONZE SADDLE WITH IP THREADS, JONES J-969 OR APPROVED EQUAL.
NOTE:
SOLDERED JOINTS WILL NOT BE ALLOWED BETWEEN WATER MAIN AND WATER METER.

FURNISH AND INSTALL 17" X 30" ARMORCAST COMPOSITE POLYMER CONCRETE BOX WITH TWO PIECE LID OR APPROVED EQUAL. METER BOX SHALL HAVE TRAFFIC WEIGHT COVER IF EXPOSED TO TRAFFIC.

TUNNEL UNDER EXIST CONCRETE CURB AND/OR GUTTER. PLACE ONE (1) SACK SLURRY BACKFILL IF NOT TUNNELED.

TRENCH BACKFILL SHALL BE PER CITY STD. 108

1-1/2" & 2" METER PROVIDED BY CITY AND SET BY DEVELOPER

FURNISH & INSTALL JONES J-1913 OR J-1941 BRONZE BALL VALVE WITH LEVER HANDLE, OR APPROVED EQUAL.

3" MIN. PEA GRAVEL

FURNISH AND INSTALL 1-1/2" OR 2" BRONZE ANGLE STOP JONES J-4205 OR APPROVED EQUAL.

FURNISH AND INSTALL 1-1/2" OR 2" TYPE "K" SOFT COPPER.

90° COMPRESSION COUPLING REQUIRED FOR 2" SERVICE

ON ACP OR DIP WATER MAIN FURNISH AND INSTALL DOUBLE STRAP BRONZE SADDLE WITH IP THREADS JONES J-979 OR APPROVED EQUAL. ON C-900 WATER MAIN FURNISH AND INSTALL DOUBLE STRAP BRONZE SADDLE WITH IP THREADS JONES J-969 OR APPROVED EQUAL.
CONSTRUCTION NOTES:
1. FOR 3", 4" & 6" METER USE AMORCAST MODEL (A600 1506TAP 48MT) METER VAULT, FOR 8" METER USE AMORCAST MODEL (A600 1448TAP 48MT) METER VAULT.

2. VALVE, BOX & RISER PER CITY STD. 1013

3. DUCTILE IRON FLANGE x R.T. ADAPTER

4. FOR 3" & 4" METER USE 4" AWWA C-900 PVC, FOR 6" & 8" USE 8" AWWA C-900 PVC.

5. HOT TAP EXISTING WATER MAIN PER CITY STD. 1005
CONSTRUCT 3' X 3' X 4" THICK PCC PAD AROUND HYDRANT.

NOTES:

1. DIMENSIONS ARE FROM OUTSIDE OF WATER MAIN TO OUTSIDE OF SEWER. ALL CROSINGS SHALL BE AT 90 DEGREES WHERE POSSIBLE.

2. ZONES IDENTICAL ON EITHER SIDE OF CENTER LINES.

3. ZONE "P" IS A PROHIBITED ZONE. SECTION 64630 (e) (2) CALIFORNIA CODE OF REGULATIONS, TITLE 22 (CURRENT); OR SECTION 64572 (a) CALIFORNIA CODE OF REGULATIONS, TITLE (PROPOSED).

4. SEWER OR WATER MAINS THAT ARE 24" OR LARGER IN DIAMETER, HOUSE LATERALS ABOVE PRESSURED WATER MAINS AND SEWERS WITHIN 25' OF LOW HEAD WATER MAINS SHALL BE REVIEWED AND APPROVED BY THE DEPARTMENT OF PUBLIC HEALTH.

5. MINIMUM SEPARATION SHALL BE 10' HORIZONTALLY AND 1' VERTICALLY ABOVE SEWER MAIN. IN EXCEPTIONAL SITUATIONS, WHERE SEPARATION IS NOT FEASIBLE, THE ABOVE SPECIAL CONSTRUCTION PROVISIONS SHALL BE MADE.

6. WATER MAINS AND SEWER MAINS SHALL NOT BE INSTALLED IN A COMMON TRENCH. WATER SERVICE LATERALS AND SEWER LATERALS SHALL HAVE A 5' MIN. SEPARATION.

7. THE DESIGN AND INSTALLATION OF SEWER FORCE MAINS REQUIRE CITY REVIEW AND APPROVAL.

10. SEPARATION CRITERIA ALSO APPLIES TO HOUSE LATERALS ABOVE PRESSURE WATER MAINS.

NOTES CONTINUED ON SHEET 4
CASE I - NEW SEWER MAIN - EXISTING WATER MAIN (FIGURES 1 AND 2)

ZONE "A" SEWER LINES SHALL NOT BE PERMITTED IN THIS ZONE WITHOUT SPECIAL PERMISSION FROM THE STATE OF CALIFORNIA DEPARTMENT OF PUBLIC HEALTH.

"B" EXTRA-STRENGTH VITRIFIED CLAY PIPE OR DUCTILE IRON PIPE WITH COMPRESSION JOINTS, SPIRAIALLY REINFORCED HDPE PIPE WITH GASKETED JOINTS, OR PVC SEWER PIPE WITH PUSH-ON TYPE RUBBER RING JOINTS FOR SEWER LINES.

"C" A CONTINUOUS SECTION OF DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING (SEWER MAIN SHALL HAVE NO JOINTS WITHIN 10 FEET FROM EITHER SIDE OF THE WATER MAIN) OR SEWER PIPE WITHIN A CONTINUOUS SLEEVE, OR ANY SEWER PIPE IN A 1/4" THICK CONTINUOUS STEEL CASING WITH ANNULAR SPACE PRESSURE GROUTED FOR SEWER LINES.

"D" DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING AND MECHANICAL JOINTS (THE SEWER MAIN SHALL HAVE NO JOINTS WITHIN 4 FEET FROM EITHER SIDE OF THE WATER MAIN), OR SEWER PIPE WITHIN A CONTINUOUS SLEEVE. ANY SEWER PIPE IN A 1/4" THICK CONTINUOUS STEEL CASING WITH ANNULAR SPACE PRESSURE GROUTED ON ANY SEWER PIPE SEPARATED BY A 10'x10'x4" THICK REINFORCED CONCRETE SLAB.

"P" SEWER LINES SHALL NOT BE PERMITTED IN THIS ZONE.

CASE II - NEW WATER MAIN - EXISTING SEWER MAIN (FIGURES 1 AND 2)

ZONE "A" NO WATER MAINS PARALLEL TO SEWER MAINS SHALL BE CONSTRUCTED WITHOUT PRIOR WRITTEN APPROVAL FROM THE DEPARTMENT OF PUBLIC HEALTH.

"B" IF THE SEWER MAIN PARALLELING THE WATER MAIN DOES NOT MEET THE CASE I ZONE B REQUIREMENTS, THE WATER MAIN SHALL BE DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING, CMC&L ½” THICK WELDED STEEL PIPE OR CLASS 200 PRESSURE RATED PVC WATER PIPE.

"C" IF THE SEWER MAIN CROSSING ABOVE THE WATER MAIN DOES NOT MEET THE CASE I ZONE C REQUIREMENTS, THE WATER MAIN SHOULD HAVE NO JOINTS WITHIN TEN FEET FROM EITHER SIDE OF THE WATER MAIN (IN ZONE C) AND BE CONSTRUCTED OF ONE OF THE FOLLOWING:

1. DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING
2. CMC&L ½” THICK WELDED STEEL PIPE
3. CLASS 200 PRESSURE RATED PVC WATER PIPE

"D" IF THE SEWER MAIN CROSSING BELOW THE WATER MAIN DOES NOT MEET THE REQUIREMENTS FOR CASE 1 ZONE D, THE WATER MAIN SHOULD HAVE NO JOINTS WITHIN EIGHT FEET FROM EITHER SIDE OF THE SEWER MAIN (IN ZONE D) AND SHOULD BE CONSTRUCTED AS IN ZONE C.

"P" WATER MAINS SHALL NOT BE CONSTRUCTED WHEN A SEWER LINE EXISTS WITHIN THIS ZONE.

THRUST BLOCKS – GUARD POSTS
NOTES:
1. ALL THRUST BLOCK BEARING FACES SHALL BE PLACED AGAINST UNDISTURBED SOIL OR APPROVED COMPACTED BACKFILL.
2. CONCRETE SHALL BE CLASS 560–C–3250 PORTLAND CEMENT CONCRETE.
3. THRUST BLOCK BEARING FACE SHALL BE OF ADEQUATE SIZE TO RESTRRAIN FORCES RESULTING FROM A 225 PSI LINE PRESSURE AND PER CITY STD. 1202.
4. CONCRETE SHALL BE PLACED SO THE PIPE AND FITTING JOINTS WILL BE ACCESSIBLE FOR REPAIR.
MINIMUM SIZE OF THRUST BLOCK BEARING SURFACE

NOTES:

1. THRUST BLOCK BEARING AREA BASED ON 225 P.S.I. LINE PRESSURE AND ALLOWABLE SOIL BEARING VALUE OF 1500 psf PRESSURE WITH 36" MINIMUM COVER.
   FOR BEARING = 1000psf, 1.5 X AREA SHOWN
   FOR BEARING = 500psf, 3.0 X AREA SHOWN

2. ALL THRUST BLOCKS SHALL BE TYPE V CEMENT AND PLACED AGAINST UNDISTURBED SOIL. DESIGN ENGINEER SHALL DETERMINE SIZES NOT SHOWN.

3. THRUST BLOCKS ON CROSSSES SHALL BE USED ONLY WHEN THERE IS A STUB–OUT ON ONE OR MORE SIDES.

4. REINFORCING STEEL SHALL CONFORM TO ASTM A15 AND A305 INTERMEDIATE GRADE.

5. AT ALL FITTINGS A 3' X 3" MEE SHALL BE INSTALLED ON EACH SIDE OF FITTING.

6. CONCRETE SHALL NOT EXTEND ONTO FLANGE OR ADJOINING PIPE.

3. 90 DEGREE ELL (ONE REQUIRED EACH SIDE) BRASS
4. REDUCE MAINLINE SIZE HERE IF NECESSARY
5. UNION (ONE REQUIRED EACH SIDE) BRASS
6. HEIGHT PER CODE
7. PVC COUPLING (ONE REQUIRED EACH SIDE)
8. PVC MAINLINE PER CITY STD. 2010
9. 12" CUBE MINIMUM CONCRETE THRUST BLOCK
10. RECTANGULAR 'JUMBO' PLASTIC VALVE BOX BROOKS, AMTEK OR EQUAL, FILL WITH PEA GRAVEL AS SHOWN (OMIT LID).
NOTE:
The contractor shall off-set the concrete curb to conform to the backflow device configuration.

1. Strong box backflow cover
2. See City Std. 2008 for backflow
3. 4” depth of pea gravel as shown
4. 6” thk. 520–C–2500 concrete curb & base with strong box anchor
5. Sub-grade compacted to 90% relative compaction
6. #4 rebar cont. in curb & edge of pad as shown

No Scale
NOTES:
1. TRENCHING AND BACKFILLING SHALL BE PER STANDARD SPECIFICATIONS.
2. MINIMUM BACKFILL RELATIVE COMPACTATION SHALL BE 90%.
3. BUNDLE CONTROL WIRES TOGETHER AND TAPE TO PIPE AT 10 FOOT INTERVALS.
4. THIS STANDARD DOES NOT SUPERCEDE STREET STANDARDS.
1. CURB PER PLANS OR AS DIRECTED BY CITY
2. 5' CONCRETE WALK OR 10' RIDING & HIKING TRAIL PER PLANS OR CITY APPROVED
3. IRRIGATION MAINLINE
4. 1' CLEARANCE BETWEEN WALK AND MAINLINE
5. COMMUNICATION CONDUIT
6. IRRIGATION REMOTE CONTROL VALVE OR QUICK COUPLER VALVE
7. 5' MIN. TREE PLANTING AREA/EQUIPMENT OFFSET
8. EQUIPMENT OFFSET OR AS DIRECTED BY CITY
NOTES:

1. AFTER PLANT ESTABLISHMENT LOWER ALL POP-UP HEADS TO FINISH GRADE.

2. SPRING LOADED CHECK VALVE SHALL BE PROVIDED ON ALL HEADS NECESSARY TO PREVENT LINE BLEEDING.
NOTE:
ALL PVC THREADED CONNECTIONS TO BE COATED WITH RECTOR SEAL T-PLUS TWO OR EQUAL.

SECTION

1) 2" MAX. @ EDGE OF PAVING IN TURF OR WALL. 2" MIN. FROM CURB OR WALL.
2) POP-UP HEAD CITY APPROVED

PARKWAY TREES
NOTES:
GUYS MUST BE APPROVED BY REPRESENTATIVE OF FIELD SERVICES PRIOR TO USE.
FOUR (4) GUYS ARE REQUIRED FOR ALL MEDIAN AND SHRUB AREAS, TURF AREAS
MAY HAVE THREE (3) GUYS AT 120 DEGREES APART.

1. PROTECTIVE COLLAR.
2. 1/4" DIA. GALV. CABLE LENGTH AS REQUIRED.
3. 6-1/2" TURNBUCKLE.
4. 1/2" DIA. X 40" SCH. 40 PVC, WHITE PIPE, WIRE IN PLACE.
5. 3" HIGH WATER RETENTION BASIN. FORM FROM PLANT PIT EXCAVATION. MAY BE
   RAKED OUT PRIOR TO OTHER WORK AS DIRECTED BY LANDSCAPE ARCHITECT.
6. 2" DIA. X 15 GA. GALV. IRON PIPE STAKES 2'-0" LENGTH, DRILL TWO
   5/16" DIA. HOLES 3/4" FROM TOP TO SECURE WIRE.
7. FINISH GRADE.
8. FERTILIZER TABLETS.
9. NATIVE CLEAN BACKFILL (NO MATERIAL LARGER THAN 1/4").
10. TREE ROOTBALL: 5 & 15 GAL 1"
    ABOVE GRADE, 24" BOX & LARGER 3" ABOVE GRADE, TAPER ROOTBALL
    TO GRADE.

NO SCALE
SECTION

NOTES:

1. SHRUB ROOTBALL: CROWN SHALL BE 3" ABOVE FINISH SLOPE GRADE @ LOWER AND UPHILL SIDE.
2. 3" HIGH WATER RETENTION BASIN, FORM WITH SOIL EXCAVATED FROM UPHILL SIDE OF SHRUB.
3. 1:1 MAX. COMPACTED TAPER FILL.
4. FERTILIZER TABLETS.
5. NATIVE CLEAN BACKFILL (NO MATERIAL LARGER THAN 1/4").
6. EXISTING SLOPE
7. EROSION CONTROL REQUIREMENTS MUST BE IMPLEMENTED AS NEEDED

NO SCALE
SECTION

1. Rootball crown shall be 1/4”-1/2” above flushed with finish grade. Avoid planting shrubs directly in front of irrigation spray heads. Provide clearance when possible.

2. 3” High water retention basin, form from plant pit excavation. May be raked out prior to other work as directed by landscape architect.

3. Finish grade

4. Fertilizer tablets.

5. Native clean backfill (no material larger than 1/4”).

NO SCALE
1. Refer to City Stds. 2208 & 2209 for typ. staking and notes.
2. Tree rootball crown shall be 4" above fin. grd. Shave to grd. as required.
3. 4" dia. threaded PVC cap with 3-3/8" holes drilled for aeration.
4. Finish grade.
5. 4" dia. PVC pipe (not perforated) with male adaptor 2" clr. of fin. grd. (2 locations)
6. 6" cont. backfill of 3/4" gravel.
7. 4" dia. perforated PVC pipe. Refer to plan view.
8. Undisturbed sub-grade.
