Report Transmittal
Phase I Environmental Site Assessment
14321 Myford Road
Tustin, California 92780

Dear Mr. LeBlanc:

Transmitted herewith is a Phase I Environmental Site Assessment report for the approximately 3.51-acre property at 14321 Myford Road in Tustin, California. If you have any questions about the report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 102 or at pmiller@avocetenv.com.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

EXECUTIVE SUMMARY

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.51-acre[1] property at 14321 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The primary objective of the Phase I ESA is to evaluate the history and current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have adversely impacted the underlying vadose zone and/or groundwater. Based on the site's history and current condition, "Recognized Environmental Conditions" (RECs), "Controlled RECs" (CRECs), and "Historical RECs" (HRECs), as defined in ASTM Standard E1527-13 (ASTM, 2013), and "other environmental features" (OEFs) have been identified. For Phase I ESA purposes, OEFs are defined as conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which Avocet believes warrant mention for visibility purposes in the context of acquiring and/or redeveloping the site. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger scale aerial photograph of the site is presented in Figure 3.

OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a single-story building with a footprint of approximately 60,000 square feet. The site is currently occupied by Woodbridge Glass-Werner Systems, Inc. (Woodbridge Glass). Woodbridge Glass uses part of the building to manufacture aluminum window frames for commercial buildings, although the glass is installed elsewhere. The remainder of the building is administrative office space and the exterior areas are paved for parking and outdoor storage or are landscaped (Figure 3). According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	**Area** (Acres)	**Address**	**Reported Owner**
432-473-13	3.51	14321 Myford Road	Siciliani Brothers, LLC

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the site is believed to have been developed with the existing building in or shortly before 1980. Wespercorp, a manufacturer of computer parts and biomedical and analytical instruments, is believed to have been the first occupant at the site. Permits indicate Wespercorp operated two vapor spray degreasers with 1,1,1-trichloroethane (1,1,1-TCA), "trichlorotri-fluoroethane" (Freon 113), methylene chloride, or some combination of these three used as the degreasing solvent. However, it is not clear where the two degreasers were located or how long they were used for. It is not clear exactly when, but at some point, Silicon Systems, Inc. (SSi), which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the southwest-adjacent property at 14351 Myford Road. Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, permits indicate SSi operated a boiler, a soldering machine, and an oven at 14321 Myford Road; however, some or all of this equipment may actually have been installed next door at 14351 Myford Road, with 14321 Myford Road used as the mailing address.

Woodbridge Glass has occupied by the site since 2003 and manufactures aluminum window frames in the rear (northwest) end of the building, with the remainder built out as administrative office space. Woodbridge Glass's operations at the site include cutting and assembling aluminum frames, including welding, for commercial windows, although the glass for the windows is installed at another nearby facility. The workshop features multiple laser cutters, saws, and shearing machines. Potentially hazardous substances used in the manufacturing operations include synthetic cutting oil, small quantities of petroleum-based lubricants for machinery, and small quantities of gasoline and diesel used in equipment such as generators and forklifts. The outdoor portions of the site are paved and are either used for employee parking or for outdoor storage of aluminum bar stock and wooden pallets. Liquid wastes are stored inside the building, for the most part with secondary containment, and periodically transported offsite for disposal or to be recycled; none of the liquid waste is treated onsite. The subject site is not known to have featured, nor did Avocet observe, any subsurface infrastructure such as wastewater clarifiers, underground storage tanks (USTs), or floor drains.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site, as follows:

- **REC 1 – Former Degreasers.** Permits issued by South Coast Air Quality Management District (SCAQMD) in 1980 indicate that Wespercorp, a former occupant, operated two vapor spray degreasers at the site starting in 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents. It is not clear where the two degreasers were located or how long they were used; however, solvent releases from vapor degreasers are common, including via liquid "drag-out" and as heavier-than-air vapors. Based on the possible presence of organic vapors in the subsurface, Avocet considers the former degreasers a REC.

CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any HRECs at the site.

OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and redeveloping the site.

OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified two OEFs at the site, sequentially numbered after the REC, as follows:

- **OEF 2 – Site-Wide POL Use.** Petroleum, oil, and lubricants (POLs) have been used in the workshop since Woodbridge Glass started operating at the site in 2003. The workshop currently features drums and smaller containers of used and fresh cutting oil and lubricating oil for machinery. Drums and smaller storage containers are stored largely with secondary containment, but Avocet did observe a few containers without secondary containment during the walkover survey. Minor staining was observed during Avocet's walkover survey throughout the interior of the workshop, which suggests that periodic, *de minimis* surface spills have occurred. However, there are no indications of larger or more significant spills and none of the surfaces in the vicinity of these areas are unpaved.

- **OEF 3 – ACMs and LBP.** The site was developed in or before 1980, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has since been extensively remodeled and SCAQMD records indicate at least some ACMs were abated in 2011. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs, however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if volatile organic compounds (VOCs) are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that Wespercorp, a former occupant, operated two vapor spray degreasers at the site, a VIC cannot be ruled out, and as chlorinated solvents were released at the former Tungsten Carbide Manufacturing facility to the southwest, a VEC also cannot be ruled out without soil vapor sampling.

1.0 INTRODUCTION

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.51-acre[1] property at 14321 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger-scale aerial photograph of the site is presented in Figure 3.

1.1 OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a single-story building with a footprint of approximately 60,000 square feet. The site is currently occupied by Woodbridge Glass-Werner Systems, Inc. (Woodbridge Glass). Woodbridge Glass uses part of the building to manufacture aluminum window frames for commercial buildings, although the glass is installed elsewhere. The remainder of the building is administrative office space, and the exterior areas are paved for parking and outdoor storage or are landscaped (Figure 3). According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	Area (Acres)	Address	Reported Owner
432-473-13	3.51	14321 Myford Road	Siciliani Brothers, LLC

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the site is believed to have been developed with the existing building in or shortly before 1980. Wespercorp, a manufacturer of computer parts and biomedical and analytical instruments, is believed to have been the first occupant at the site. Permits indicate Wespercorp operated two vapor spray degreasers with 1,1,1-trichloroethane (1,1,1-TCA), "trichlorotri-fluoroethane" (Freon 113), methylene chloride, or some combination of these three used as the degreasing solvent. However, it is not clear where the two degreasers were located or how long they were used. It is not clear exactly when, but at some point, Silicon Systems, Inc.

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

(SSi), which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the southwest-adjacent property at 14351 Myford Road. Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, permits indicate SSi operated a boiler, a soldering machine, and an oven at 14321 Myford Road; however, some or all of this equipment may actually have been installed next door at 14351 Myford Road, with 14321 Myford Road used as the mailing address.

Woodbridge Glass has occupied the site since 2003 and manufactures aluminum window frames in the rear (northwest) end of the building, with the remainder built out as administrative office space. Woodbridge Glass's operations at the site include cutting and assembling aluminum frames, including welding, for commercial windows, although the glass for the windows is installed at another nearby facility. The workshop features multiple laser cutters, saws, and shearing machines. Potentially hazardous substances used in the manufacturing operations include synthetic cutting oil, small quantities of petroleum-based lubricants for machinery, and small quantities of gasoline and diesel used in equipment such as generators and forklifts. The outdoor portions of the site are paved and are either used for employee parking or for outdoor storage of aluminum bar stock and wooden pallets. Liquid wastes are stored inside the building, for the most part with secondary containment, and periodically transported offsite for disposal or to be recycled; none of the liquid waste is treated onsite. The subject site is not known to have featured, nor did Avocet observe, any subsurface infrastructure such as wastewater clarifiers, underground storage tanks (USTs), or floor drains.

1.2 PHASE I ESA OBJECTIVES

The overall objective of the Phase I ESA documented herein is to assess the site in the context of the possible presence of potentially hazardous substances in the onsite structures and the documented presence of hazardous substances in soil and groundwater beneath the site. Specific objectives of the Phase I ESA are to:

- Document the history of the site in the context of the use, storage, handling, treatment, and disposal of potentially hazardous substances.
- Review and evaluate available information related to the investigation and remediation of known or suspected subsurface impacts.
- Assess the potential for previously unidentified hazardous substances to be present in the subsurface as a result of their past use, storage, handling, or disposal within or near the site.
- Identify "Recognized Environmental Conditions" (RECs), "Controlled" RECs (CRECs), and historical RECs (HRECs), as defined in ASTM Standard E1527-21 (ASTM, 2021).
- Identify "other environmental features" (OEFs), defined for Phase I ESA purposes as existing or former site features or conditions that do not meet the ASTM

definition of a REC, CREC, or HREC but which warrant mention for visibility purposes in the context of acquiring and redeveloping the site.

1.3 APPROACH

The subject Phase I ESA was conducted in general accordance with the scope and limitations of ASTM E1527-21 (ASTM, 2021) and included:

- A review of relevant background information, including the history of the site and adjacent properties, past land use, and regional hydrogeological conditions.
- A review of topographic maps, aerial photographs, and environmental records pertaining to the site.
- A walkover survey of the site and vicinity on January 26, 2022.
- A review of potential offsite sources of contamination that could adversely impact the subsurface environment beneath the site, including a search of regulatory agency databases and visual surveys of adjoining properties.

The format of this Phase I ESA report is different from that recommended by ASTM; however, all of the elements required by ASTM E1527-21 are included or otherwise addressed.

1.4 LIMITATIONS

This Phase I ESA was performed in general accordance with the scope and limitations of ASTM E1527-21 (ASTM, 2021) and the standard of care customary in the environmental consulting industry as of the date of this report. Key dates in the Phase I ESA process were as follows:

Key Phase I ESA Dates		
Task	**Responsible Party**	**Date**
Database Search	EDR	01/12/22
Site Inspection	Avocet	01/26/22

The conclusions in this Phase I ESA report are based on the information available to Avocet from the sources cited; however, Avocet makes no warranty regarding the accuracy or completeness of this information. Moreover, this Phase I ESA specifically excludes any evaluation of geotechnical conditions, seismicity, flooding hazards, or the possible impact (if any) of electromagnetic fields associated with onsite or nearby electrical facilities. Also, this report cannot and does not include any evaluation of undocumented activities at the site or on adjacent or nearby properties. The exclusions noted above should not be interpreted to mean that every other condition or potential condition has been considered in the subject Phase I ESA.

Avocet conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC for decision-making in the context of possibly purchasing and redeveloping the site for commercial/industrial

purposes. B8 Myford II Industrial Owner LLC may rely upon the information in this Phase I ESA report until July 11, 2022, which is 180 days from the earliest of the key dates above. After July 11, 2022, certain components of this Phase I ESA should be updated, and after January 12, 2023, this Phase I ESA should be redone to maintain compliance with ASTM E1527-21 and EPA's AAI requirement. Avocet will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond these viability dates, or from unauthorized use by third parties.

1.5 Report Organization

Including the introduction, this report is organized into six sections. Section 2.0 describes the various sources of information utilized in conducting the Phase I ESA. Section 3.0 presents a summary of relevant background and regional information. Section 4.0 describes the history and current condition of the site. Section 5.0 presents a summary of information gathered from a review of environmental databases maintained by local, state, and federal government agencies and describes the properties adjoining the site and selected nearby properties. Section 6.0 presents conclusions, in terms of identified RECs, CRECs, HRECs, and OEFs, and related recommendations.

Supporting information is contained in tables, figures, and six appendices, all of which follow the text of this report. Appendices A and B contain historical topographic maps and historical aerial photographs, respectively, annotated with the site boundary. Appendix C contains a Certified Sanborn® Map Report, although fire insurance map coverage of the site was not available. Appendix D is a City Directory report summarizing entries recorded in business, telephone, and other directories. Appendix E contains photographs of the site taken during Avocet's January 26, 2022 walkover survey. Appendix F is a report summarizing information available from a review of environmental databases maintained by local, state, and federal government agencies.

2.0 SOURCES OF INFORMATION

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps, historical aerial photographs, a walkover survey of the site, records available at selected local and state regulatory agencies, environmental databases maintained by local, state, and federal government agencies and other records available from commercial and online sources.

2.1 TOPOGRAPHIC MAPS

To evaluate the history of the site and past land uses, Avocet obtained copies of historical U.S. Geological Survey (USGS) topographic maps from EDR. The maps, which were published between 1896 and 2018 and which EDR marks up with the approximate site boundary, are included in chronological order in Appendix A.

2.2 AERIAL PHOTOGRAPHS

To further evaluate the site's history, Avocet obtained a "Decade Package" of historical aerial photographs from EDR. EDR's Decade Package typically includes at least one aerial photograph from each decade from the 1920s through the present day. For the subject project, EDR provided aerial photographs taken between 1938 and 2016. The photographs, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix B.

2.3 FIRE INSURANCE MAPS

At Avocet's request, EDR conducted a search for Sanborn® insurance map coverage of the site and vicinity; however, EDR reported that the site is an "unmapped property." A copy of EDR's report to that effect is included as Appendix C.

2.4 CITY DIRECTORIES

Telephone and business directories have been published for cities and counties across the United States since the 1700s and often contain potentially useful information on past land uses and the types of business that operated at individual street addresses. EDR extracts information from such directories and consolidates it in its "EDR-City Directory Image Report," a copy of which is included as Appendix D to this report.

2.5 WALKOVER SURVEY AND INTERVIEWS

Avocet personnel conducted a walkover survey of the site and vicinity on January 26, 2022 accompanied by Mr. Steve Siciliani, the owner of Woodbridge Glass and part of the site ownership entity. Selected photographs taken during the walkover survey, with Mr. Siciliani's permission, are included in Appendix E. During the walkover survey, Avocet interviewed Mr. Siciliani about the site's recent past history, in particular the storage and use of potentially hazardous substances and the generation of related hazardous wastes. The information provided by Mr. Siciliani is included, where appropriate, throughout this report.

2.6 GOVERNMENT DATABASES

EDR conducted a government records search to document potential sources of contamination at or near the site. The search included databases maintained by federal, state, and local agencies for the site and for other properties within ASTM-standard radii of the site. The records search is summarized in Section 5.0, and a copy of "The EDR Radius Map™ Report with GeoCheck®" is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

2.7 RECORDS AVAILABLE ONLINE

Avocet searched the GeoTracker and EnviroStor websites maintained by the California Environmental Protection Agency (CalEPA) for additional environmental records pertaining to the subject site as well as records pertaining to selected nearby properties. Relevant information from this research is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.8 INFORMATION FROM REGULATORY AGENCIES

On January 14, 2022, Avocet contacted selected federal, state, and local regulatory agencies to determine whether they may have potentially relevant environmental records pertaining to the site, including, in particular, records relating to USTs, aboveground storage tanks (ASTs), environmental permits, enforcement orders, reports and correspondence related to site investigation/assessment, soil sampling, monitoring, cleanup/remediation, removal actions, closures, or any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Avocet's interactions with them were as follows:

- Avocet searched the EPA MyProperty online portal for records related to the subject site address. Avocet notes the MyProperty portal requires an exact, "letter by letter" address match, including abbreviations and punctuation, so Avocet searched for various forms of the 14321 Myford Road address and obtained records pertaining to hazardous waste generation. In brief, the information available on MyProperty was consistent with information obtained from other sources.

- A written records request was faxed to the California Department of Toxic Substances Control (DTSC) office in Cypress; however, as of the date of this report, DTSC has not yet responded to this request.

- A written request was emailed to the Santa Ana Regional Water Quality Control Board (SARWQCB), which responded on January 18, 2022 that it does not have any records responsive to Avocet's request.

- An online records request form was submitted through the Orange County Health Care Agency (OCHCA) website. OCHCA responded on January 18, 2022 with records pertaining to routine hazardous waste generator inspections. Most of the

inspection results indicated that Woodbridge Glass-Werner Systems was operating within regulatory standards. Minor violations that were administrative in nature were noted on a few occasions.

- An online records request form was submitted through the Orange County Fire Authority (OCFA) website. OCFA responded on January 14, 2022 by emailing Avocet its records, which included a list of permits that Woodbridge Glass maintains.

- An online records request form was submitted through the Orange County Sanitation District (OCSD) website. In an email dated January 19, 2022, OCSD indicated it does not have any records responsive to Avocet's request.

- A request form was submitted to South Coast Air Quality Management District (SCAQMD), which responded with records related to permitting and permitted equipment.

The records obtained from the agencies listed above are referenced and/or integrated, as appropriate, throughout the remainder of this report.

2.9 Oil and Gas Records

To assess the possible presence of oil and/or natural gas wells at or in the vicinity of the site, Avocet reviewed information available online from the California Geologic Energy Management Division (CalGEM). The findings of this review are summarized in Section 3.4.

2.10 Radon Gas Records

To assess the possible presence of naturally occurring radon gas in the subsurface in the site vicinity, Avocet reviewed data available through the EPA and the California Department of Public Health (CDPH). Radon gas data were also included in the EDR Radius Map Report (Appendix F). The available radon gas data are summarized in Section 3.5.

3.0 BACKGROUND AND REGIONAL INFORMATION

Background and regional information considered relevant to the subject Phase I ESA includes nearby surface water features, the site's physiographic setting, and regional geologic and hydrogeologic conditions.

3.1 PHYSIOGRAPHIC SETTING AND DRAINAGE

The subject property is located on the Coastal Plain of Orange County. The Coastal Plain covers approximately 350 square miles and is bounded by the Pacific Ocean to the west-southwest and consolidated rocks of the Chino and Puente hills to the north, the San Joaquin Hills to the south, and the Santa Ana Mountains to the east.

The ground surface in the site vicinity is at around 69 feet above mean sea level and generally slopes to the south southwest, toward Upper Newport Bay. The closest surface water body to the site is Irvine Channel, a concrete-lined drainage channel that passes within approximately 600 feet east of the site at its closest approach. However, Irvine Channel is not considered especially relevant for Phase I ESA purposes.

3.2 REGIONAL GEOLOGY

The site is located within the Los Angeles Basin, a geologic structure that evolved through five major phases: pre-depositional (basement rocks), pre-basin deposition (late Cretaceous through lower Miocene rocks), basin inception (middle Miocene), principal subsidence and deposition (upper Miocene and lower Pleistocene), and basin disruption (upper Pleistocene through Recent deposits). The basement rocks of the pre-depositional phase are composed of metamorphosed sedimentary and volcanic rocks, partially intruded by plutonic rocks. The upper Cretaceous rocks of the pre-basin phase of deposition are comprised of clastic marine sedimentary deposits beneath shallow marine and non-marine clastic sedimentary deposits of the Paleocene to early Miocene. The middle Miocene rocks of the basin-inception phase include a various succession of marine clastic and sedimentary rocks, interbedded with volcanic rocks. The late Miocene to early Pleistocene rocks of the principal subsidence and deposition phase are comprised of primarily sandstone and siltstone, with some conglomerate, shale, and fine-grained biogenic sediment. Finally, the late Pleistocene to recent rocks of the basin-disruption phase are comprised of lagoonal marine and non-marine deposits overlain by non-marine gravel, silt, and sand.

The Los Angeles Basin can be divided into four structural blocks, primarily designated by their basement blocks and superjacent sedimentary packages. The four blocks are referred to as the Northwestern, Southwestern, Northeastern, and Central Blocks. The subject site is located in the southeastern portion of the Central Block, which encompasses the area northwest of the Newport Inglewood Fault Zone, extending north to the Santa Monica Mountains, east to the Puente Hills, and southeast to the Santa Ana Mountains and San Joaquin Hills.

3.3 HYDROGEOLOGY

The subject site is located within the Orange County Groundwater Basin (the Basin), which underlies the Coastal Plain mentioned above. The Basin is divided into three regional subbasins: the Yorba Linda, Main, and Irvine subbasins. The site is located in the western portion of the Irvine subbasin and is bounded by the Santa Ana Mountains to the east, the San Joaquin Hills to the south and southwest, and the Costa Mesa Freeway to the north.

The Basin includes numerous aquifers separated to varying degrees by lower permeability sediments. Groundwater in these aquifers is utilized for municipal drinking and agricultural purposes, but most production wells in the Irvine area are screened deeper than 200 feet below ground surface (bgs). The uppermost, Shallow Aquifer System or "semiperched" aquifer, which extends from the surface to approximately 160 feet bgs, is more relevant for Phase I ESA purposes. Groundwater in the Shallow Aquifer System is generally considered hard and brackish and typically is not used directly for agricultural or municipal purposes, although there is evidence that it is in communication with deeper aquifers that have direct beneficial uses. Investigations by Orange County Water District related to its South Basin Groundwater Protection Project have shown that the Shallow Aquifer System is very complex in terms of the occurrence and movement of groundwater, both laterally and vertically. In brief, there are several relatively discrete water-bearing zones within 150 feet of the ground surface, with varying degrees of hydraulic communication between them. However, some of these water-bearing zones are laterally discontinuous, and the movement of groundwater is further complicated by the likely presence of buried stream channels filled with more permeable sediments that provide "paths of least resistance" for groundwater and contaminant migration. In broad terms, however, groundwater in the Shallow Aquifer System generally flows to the southwest, toward Upper Newport Bay.

As far as Avocet is aware, no intrusive investigations have been conducted at the subject site; however, the southwest-adjoining property, at 14351 Myford Road (Section 5.4), was investigated between 1983 and 1996 and subsurface conditions beneath the site are assumed to be similar. The property at 14351 Myford Road is underlain by an approximately 10-foot layer of clay overlying silty sand. Another thin clay layer is present at approximately 25 feet bgs; however, this clay layer may be laterally discontinuous as it was only encountered in two of six well borings (D'Appolonia, July 11, 1983). Shallow groundwater was encountered at 14351 Myford Road at between 6 and 10 feet bgs and flows to the south-southwest (Geosystem Consultants, Inc., July 31, 1996).

3.4 OIL, GAS, AND GEOTHERMAL WELLS

According to CalGEM, records available online, the site is not within or near the administrative boundary of an oil field. The nearest oil well to the site is a "plugged dry hole" located approximately 1,000 feet to the east-southeast. According to the available records, the "Irvine 63-1" well was completed on June 18, 1949 but never produced any oil and was abandoned on July 18, 1949, shortly after being drilled (California Division of Oil and Gas, August 10, 1949). No other oil or gas wells, abandoned or active, are located within 1 mile of the subject site. As such, it is unlikely that the subject site has been impacted by historical oil production operations in the area.

3.5 RADON GAS

EPA recommends avoiding long-term exposure to radon levels greater than 4 picocuries per liter (pCi/L). CDPH maintains indoor radon test result records for California sorted by zip code (CDPH, February 2016). In brief, indoor radon measurements were performed throughout the state, and the percentage of buildings with reported radon levels greater than 4 pCi/L within each zip code was reported, along with the number of buildings tested. Of the 42 buildings tested for radon within the 92780 zip code in which the subject site is located, only one contained radon at above 4 pCi/L. In addition to the above, the EPA and the USGS maintain a Map of Radon Zones for the United States, organized by county (EPA, 2016). According to the map, Orange County is a Radon Zone 3, indicating that radon levels in buildings are expected to be below 2 pCi/L. EDR's Radius Map Report (Appendix F) indicates that the average radon activity on the ground floor of residential structures within Orange County was 0.763 pCi/L, which is less than EPA's recommended maximum exposure level. Based on the above, naturally occurring radon is unlikely to be of concern in the vicinity of the site.

4.0 SITE HISTORY AND CURRENT CONDITION

This section documents the history and current condition of the site, with emphasis on current or former environmental features.

4.1 SITE HISTORY

The history of the site and vicinity has been compiled based on information from the sources outlined in Section 2.0, particularly the historical aerial photographs and topographic maps. For discussion purposes, the site's history has been divided into sections based on the principal land uses within the site boundary with, to the extent known, the approximate date ranges.

4.1.1 Agricultural Land Use, <1938 to ~1980

The earliest records reviewed for Phase I ESA purposes were topographic maps published in 1896, 1901, and 1902 (Appendix A). These near-identical maps show that the subject site was undeveloped, as was much of the surrounding area, although the area may have been agricultural at the time. Tustin is shown on the maps as a few dozen residences around the beginnings of a street grid approximately 0.8 mile to the northwest of the site. The Los Angeles branch of the Atchison, Topeka, and Santa Fe (AT&SF) Railway is shown running northwest-southeast, approximately 1 mile southwest of the site at its closest approach. Topographic maps published in 1932 and 1935 (Appendix A) show that the street grid had been expanded outward from "downtown" Tustin, and many of the existing roads, including Myford Road, were depicted, although Myford Road's alignment was different, and it did not yet extend as far west as the subject site. Rather, the site appears to have been in an area (known to have been agricultural from a 1938 aerial photograph) bounded and crisscrossed by dirt roads. A portion of historical Highway 101 ran along the existing Santa Ana (5) Freeway alignment, approximately 0.5 mile northeast of the site. Irvine Channel, now a concrete-lined drainage channel, is shown on the 1932 and 1935 maps as an unlined channel, although its alignment does not appear to have changed significantly since then. The larger Peter's Canyon Wash is shown on both maps flowing northeast to southwest, approximately 0.4 mile southeast of the site at its closest approach. Small structures, assumed to have been residential or agricultural, were scattered throughout the area, however, there were none within or near the subject site boundary.

The earliest aerial photograph reviewed for Phase I ESA purposes was taken in 1938 (Appendix B) and shows that the site and surrounding area were agricultural. More specifically, the site included parts of four larger fields planted with grass or other ground crop(s). To the southwest of the site, a small agricultural reservoir is visible in the 1938 photograph. Further afield, Highway 101 was visible to the northeast of the site and the AT&SF Railway was visible to the southwest. The unlined precursor to present-day Irvine Channel was also visible in the 1938 photograph. A topographic map published in 1942 (Appendix A) provides no additional information of use for Phase I ESA purposes, but an aerial photograph taken in 1946 (Appendix B) clearly shows that the site and the surrounding area were still planted with grass or other ground crop(s). The reservoir is clearly visible to the west-southwest of the site, as was a tall adjacent feature that could have been a wind turbine to power the well pump or a power pole. To the south of "old" Myford

Road, then still unpaved, vegetation patterns suggest that Peters Canyon Wash periodically flooded.

Topographic maps published in 1948 and 1950 (Appendix A) show that the site was still unimproved and not accessible by paved roads. The street grid around the site had not evolved much, but to the west, on the far side of the AT&SF railroad track, a Naval Reservation had been constructed. Established in 1942 and originally known as the Naval Lighter Than Air (NLTA) Station, the Naval Reservation featured two huge "blimp" hangars that have become local landmarks. Avocet notes that the NLTA was commissioned during World War II to support the United States Navy's coastal patrol effort and operated as such until 1949. The facility was reactivated in 1951 as Marine Corps Air Facility Santa Ana to support the Korean War. More recently, it became known as Marine Corps Air Station Tustin and operated as a helicopter base. Aerial photographs taken in 1952, 1963, and 1972 (Appendix B) show no significant change in land use within or around the site apart from Irvine Channel being rerouted into Peters Canyon Wash approximately 1.5 miles southeast of the site between 1952 and 1963.

Although not visible in the aerial photographs, a topographic map published in 1965 (Appendix A) shows a water well southwest of the subject site and annotates an adjacent structure as "*Res*" for reservoir. The 1965 map shows that the well and the reservoir were accessed via a dirt road from Myford Road, which also was unpaved. Two tall, slender structures located adjacent to the reservoir and visible in the 1952 photograph are assumed to have been wind turbines or power poles. To the northeast of the site, Highway 101 had been widened and renamed the Santa Ana (5) Freeway by 1965. An aerial photograph taken in 1974 and erroneously included in EDR's topographic map report (Appendix A) appears to show present-day Myford Road and the surrounding streets under construction, although none of the existing buildings had been built and the site and the surrounding properties appeared fallow and unimproved.

4.1.2 Wespercorp and SSi, ~1980 – 2003

It is not clear exactly when the existing building at the site was constructed; it is not shown on a topographic map published in 1981 (Appendix A); however, records obtained from SCAQMD include permits issued to Wespercorp at the site address in May 1980 and Wespercorp is the first occupant listed in EDR's City Directory (Appendix D), albeit in 1982.

Wespercorp appears to have started out making computer parts but later also manufactured biomedical and analytical instruments at the site. A facility equipment list obtained from SCAQMD indicates Wespercorp operated two vapor spray degreasers, which were first permitted on May 29, 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents with a maximum permitted "solvent loss" from each degreaser of 0.63 gallon per day. Both degreasers measured approximately 2-feet by 4 feet by 3 feet high, suggesting they were installed on the floor of the building, as opposed to on a bench top. The next City Directory listing for the site was for 1987 but did not indicate an occupant, possibly suggesting Wespercorp had vacated the site by this time. It is not clear exactly when, but at some point, SSi, which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the

southwest-adjacent property at 14351 Myford Road (Section 5.4). Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, SCAQMD provided permits for SSi to operate a boiler, a soldering machine, and an oven at 14321 Myford Road; however, this equipment may have been installed 14351 Myford Road with 14321 Myford Road used as the mailing address.

As noted above, the existing building at the site is not shown on a topographic map published in 1981 (Appendix A), although it appears to have been built in or before 1980. The 1981 topographic map does, however, show the present-day Myford Road alignment with the original Myford Road, since replaced by Jamboree Road, to the southeast. Avocet understands that for a time there were references to "old" and "new" Myford Road, but these prefixes appear to have been dropped when Jamboree Road replaced "old" Myford Road. The 1981 map also shows a few new commercial or industrial buildings on nearby lots, including the former Tungsten Carbide Manufacturing (TCM) facility at 14451 Myford Road (Section 5.7.1). An aerial photograph taken in 1985 (Appendix B) shows the existing building at the subject site with the former SSi facility adjoining to the southwest. The 1985 photograph also shows commercial buildings on the surrounding lots, although the adjoining property to the northeast was a parking lot. Although difficult to discern from the 1985 aerial photograph, but depicted on the 1981 map in Appendix A, a single railroad track ran along the rear (northwestern) boundary of the site, although there are no indications any of the subject site occupants ever used it. The 1985 photograph shows that the land on the southeast side of (new) Myford Road was still agricultural at the time, as was the land further to the southeast. The only other undeveloped areas in the site vicinity in 1985 were to the northwest, across the railroad track, and to the southwest, between the former SSi and TCM facilities.

Topographic maps published in 2012, 2015, and 2018 (Appendix A) provide no land use information of use for Phase I ESA purposes. Aerial photographs taken in 1989 and 1994 (Appendix B) show no obvious change in conditions at the site although by 1989, the fallow former agricultural parcel between the former SSi and TCM facilities had been paved for TCM employee parking, and by 1994, the formerly fallow area across the railroad track to the northwest of the site had also been paved for parking. An aerial photograph taken in 2002 (Appendix B) shows no obvious change in conditions at or around the site other than that the former agricultural area on the opposite (southeast) side of Myford Road had been developed with the existing buildings.

4.1.3 Woodbridge Glass – Werner Systems, Inc., 2003 - Present

Mr. Siciliani indicated during the walkover survey that he purchased the subject site from Texas Instruments, Inc., the successor in interest to SSi, for his glass business in 2003 and has operated at the site ever since. Aerial photographs taken after 2003 reflect the outdoor storage of aluminum and other dry materials in the paved areas around the existing building but provide essentially no additional information of use for Phase I ESA purposes. An aerial photograph taken in 2005 (Appendix B), however, shows that the 261 Toll Road had been constructed approximately 1,000 feet to the southeast of the site and immediately southeast of the Irvine Channel. Subsequent aerial photographs, taken in 2009, 2012, and 2016 (Appendix B), show no discernible changes in

land use at or around the site, although a few small "infill" parcels adjacent to the now much widened Santa Ana Freeway were developed between 2005 and 2009.

4.2 CURRENT SITE CONDITIONS

Avocet conducted a walkover survey of the site on January 26, 2022 to visually assess current conditions. Selected photographs taken during the survey are included in Appendix E and are referenced, where appropriate, below. In brief, the subject site features a single-story building with a footprint of approximately 60,000 square feet surrounded by asphalt pavement used for employee parking and outdoor storage (Figure 3). The property is accessible via two driveways, one in the northeast corner of the property and one in the southeast corner (Photographs E-1 and E-2)

4.2.1 Outdoor Areas

The areas outside the building to the southeast and southwest are used for employee and visitor parking (Photograph E-3). The areas along the northeastern side of the building and behind the building to the northwest are used to store aluminum stock and wooden pallets (Photograph E-4). Storage containers stacked in the southwest corner of the site are used to store more dry materials (Photograph E-5). Immediately east of the storage containers are numerous recycle and waste bins (Photograph E-6), all of which were empty at the time of Avocet's walkover survey. A woodworking area is located immediately outside the northwest corner of the building. A covered canopy is located along the southwestern wall of the building, under which is a lumber saw (Photograph E-7). Immediately southeast of the canopy along the southwestern side of the building is a three-sided, covered metal structure used for painting. The floor of the building is covered with plywood sheets with obvious paint overspray. Cans of paint were stacked throughout the metal structure (Photographs E-8 and E-9). Avocet did not observe any floor drains or other subsurface infrastructure in the outdoor areas of the site and, according to Mr. Siciliani, no such subsurface infrastructure exists at the site.

4.2.2 Workshop

The workshop occupies approximately the northwestern half of the building. The floor throughout workshop is of sealed concrete, which appeared to be in good condition during Avocet's walkover survey, and the space is open to the underside of the uninsulated roof, with the roof beams and joists exposed (Photograph E-10). The central part of the workshop is open and used for cutting aluminum bar stock to make frames for windows, which will eventually be installed in commercial buildings. Mr. Siciliano indicated that the subject site is used to manufacture all of Woodbridge Glass's frames; however, the frames are transported to another nearby facility to have the glass installed. Most of the main floor of the workshop is occupied by machine tools used to cut and shape metal, including shearing machines, laser cutters, and the like. Aluminum sheeting and bar stock are stored on pallets throughout the workshop (Photographs E-10, E-11, and E-12). Waste aluminum is collected in large bins to be recycled (Photograph E-13). Woodbridge Glass uses limited quantities of potentially hazardous chemicals in its operations, including gasoline and diesel fuel, oil, silicone-based lubricants, synthetic cutting oil, and isopropanol. The gasoline and diesel fuel are used in generators and forklifts. Avocet did not observe the storage of these items

onsite at the time of the walkover survey, and Mr. Siciliani indicated if these liquids are stored onsite, they are typically in 1-gallon containers to top off equipment. Other liquid chemicals are stored onsite in containers ranging from 1-gallon bottles to 55-gallon drums. During the walkover survey, Avocet observed liquid wastes being accumulated in containers ranging from 1 to 55 gallons on plastic secondary containment trays (Photograph E-14). These liquid wastes are transported offsite for disposal or to be recycled; there is no onsite treatment. In addition to liquid chemicals, Woodbridge Glass utilizes inert gases in its operations, with cylinders stored in the workshop area (Photograph E-15

In the southwestern corner of the building are two storage rooms. The larger of the two was being used to store miscellaneous items, including ladders, tables, empty boxes, fans, and other items (Photograph E-16) at the time of Avocet's walkover survey. The smaller storage room was being used to store shop vacs, fire extinguishers, filing cabinets, and boxes of various materials (Photograph E-17). A storage cage is located along the eastern wall of the main workshop area, which contains items similar to those observed in the storage rooms (Photograph E-18). In addition to these storage rooms and the main workshop floor, a welding shop is located in the northwest corner of the building (Photograph E-19).

4.2.3 Offices and Music Studio

The front or southeastern portion of the building is built out as office space and breakrooms (Photograph E-20). In addition, Mr. Siciliani has converted space in the southern portion of the building into a music studio for his band (Photograph E-21). Floor coverings in the office area were mostly carpeted with vinyl floor tiles in the hallways and a breakroom. The floor tiles were generally in good condition. Similarly, the interior paint in the building was generally in good condition, with no signs of peeling.

4.3 ASTM E1527-21 Features

ASTM E1527-21 includes a list of potential environmental features, such as USTs, ASTs, sumps, and the like, that are to be addressed in a Phase I ESA for a commercial or industrial property. The presence or absence of these features is summarized below with, where appropriate, a reference to the section of text in which they are described.

Potential Environmental Feature or Condition	Absent	Present	Comments
Hazardous substances and petroleum products in connection with identified uses		✓	Containers of waste oil cutting oil; fuel and oil in equipment. Section 4.2
Storage tanks	✓		
Strong, pungent, or noxious odors and their sources	✓		
Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products	✓		
Drums, totes, and intermediate bulk containers		✓	Cutting oil, lubricants. Section 4.2.
Hazardous substance and petroleum product containers not in connection with identified uses		✓	Cutting oils and lubricants for metal cutting machinery. Section 4.2.
Unidentified substance containers	✓		

Potential Environmental Feature or Condition	Absent	Present	Comments
Polychlorinated biphenyl (PCB)-containing items	✓		None known or observed
Heating/Cooling		✓	Heating and cooling systems in building
Stains or corrosion on floors, walls, or ceilings (except water stains)	✓		
Drains and sumps	✓		
Pits, ponds, or lagoons	✓		
Stained soil or pavement	✓		
Stressed vegetation (other than from lack of water)	✓		
Solid waste		✓	Municipal solid waste and recyclables such as aluminum and wood scraps. Section 4.2.
Water/wastewater	✓		None other than sanitary wastewater
Wells	✓		
Septic systems or cesspools	✓		

4.4 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

So far as Avocet is aware, there do not appear to have been any previous environmental investigations targeted at operations or potential contaminant source areas within the site boundary.

5.0 ADJOINING AND NEARBY PROPERTIES

This section summarizes a search by EDR of environmental databases and describes properties adjoining the subject site and selected nearby properties. The descriptions of adjoining and selected nearby properties are based on Avocet's familiarity with a few properties in the area, observations from public rights-of-way, information included in EDR's report (Appendix F), and information available from the GeoTracker and EnviroStor websites maintained by CalEPA.

5.1 DATABASE LISTINGS

EDR's search encompassed over 90 databases maintained by local, state, and federal government agencies, including all of the databases required to be searched per ASTM E1527-21 §8.2.2. The target property address of 14321 Myford Road was used for records search purposes.

EDR's January 12, 2021 Radius Map Report with GeoCheck®, which is included in Appendix F, identifies multiple database listings for the site and for offsite properties within ASTM-recommended search radii. These listings are summarized in Table 1, but in the interest of providing a concise review and making relevant information more accessible, the following summaries focus on those database listings considered potentially relevant to the objectives of the subject Phase I ESA, specifically those pertaining to the subject site and to nearby properties with documented hazardous substance releases with the potential to have impacted the site. Other properties/database listings not considered indicative of a hazardous substance release, database listings for hydraulically downgradient properties, and database listings with "Completed – Case Closed" status have generally been screened out. It is noted in this regard that inclusion in certain of the databases searched by EDR is not, in and of itself, an indication that hazardous substances have been released or that the subsurface beneath the properties is contaminated. For example, inclusion in the HAZNET or similar databases indicates that a facility generates hazardous waste, but the generator is following the proper manifest procedures. Similarly, the fact that USTs or ASTs are or were operated at a property and were registered with the state is not, in and of itself, of concern unless the tanks(s) had leaked, in which case the property should be included in other databases.

5.2 TARGET PROPERTY LISTINGS

Spelling errors and/or different uses of abbreviations and punctuation often result in multiple listings in the same databases. The database listings for the target property addresses, complete with spelling errors, are as follows:

Address	Company	Database	Comment
14321 Myford Road	Not listed	CHMIRS	Pertains to 1-gallon spill of hydraulic fluid from a delivery truck in 1995
14321 Myford Rd	Werner Systems Inc.	RCRA NonGen/NLR	Indicates the company was not generating hazardous waste in 2012, hence "no longer regulated" (NLR)
14321 Myford Rd	Woodbridge Glass Inc.	CERS HAZ WASTE	Pertains to the generation of unspecified hazardous waste
		HAZNET	Pertains to the generation of solid and liquid hazardous waste in 2012
		CERS	Pertains to permitted chemical storage, with several administrative violations
		HWTS	Pertains to hazardous waste generator number CAC002684439
14321 Myford Road	Silicon Sys Corp	EMI	Pertains to regulated air emissions of NOX, SOX, and CO, possibly at 14351 Myford Road
14321 Myford Rd	Werner Systems Inc.	HWTS	Pertains to the generation of unspecified hazardous waste
14321 Myford Rd	Werner Systems Inc.	HAZNET	Pertains to the generation of hazardous waste in 2013 through 2019
		HWTS	Pertains to hazardous waste generator number CAL000378643
14321 Myford Rd	Woodbridge Glass	ECHO	Pertains to listings in other databases
14321 & 14351 Myford Rd	Silicon Sys Corp	EMI	Pertains to regulated air emissions of hydrocarbon gases, NOX, SOX, and CO possibly at 14351 Myford Road
14321 Myford Rd	Werner Systems Inc.	FINDS	Pertains to listing as hazardous waste generator
		ECHO	Pertains to the generation of unspecified hazardous waste
14321 Myford Rd	Woodbridge Glass	HAZNET	Pertains to the generation of hazardous waste in 2008
		HWTS	Pertains to hazardous waste generator number CAC002626870
14321 Myford Rd	Woodbridge Glass Inc.	HAZNET	Pertains to the generation of hazardous waste in 2010
		HWTS	Pertains to hazardous waste generator number CAC002650937

In brief, the target property listings summarized above are consistent with Avocet's understanding of the site's history and none suggest site conditions or features beyond those documented elsewhere in this report.

5.3 Adjoining Property to the Northeast

The site is bounded to the northeast by a paved parking lot for the multi-tenant commercial building at 14191 Myford Road (Figure 2). The 14191 Myford Road address is listed in the RCRA-SQG, SCRA-LQG, CERS HAZ WASTE, and CERS databases under Avid Bioservices, Inc. Based on the listings, Avid Bioservices, Inc. has disposed of various spent nonhalogenated solvents from

biomanufacturing operations. An inspection summary from OCHCA indicates that hazardous materials used onsite include liquid nitrogen, liquid carbon dioxide, liquid oxygen, nitrogen gas, ammonium sulfate, and sodium hydroxide. There are no indications any of these chemicals have been spilled or otherwise released, and the address does not feature on the EnviroStor or GeoTracker websites maintained by CalEPA. As such, and absent additional information to the contrary, there is no reason to suspect operations at 14191 Myford Road are likely to have impacted the subject site.

5.4 Adjoining Property to the Southwest

The site is bounded to the south by a multi-tenant commercial building at 14351 Myford Road and listed in the RCRA-SQG, CA FID UST, HIST UST, ENVIROSTOR, UST, and SWEEPS UST databases under SSi and Texas Instruments. Avocet personnel are familiar with this property and note that SSi, the original owner, was acquired by TDK and, later, Texas Instruments. In brief, SSi manufactured silicon wafers in a "wafer fab" area inside the building, with related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers, cooling towers, air scrubbers, a deionized water system, and ASTs for deionized water, oxygen, hydrogen, and inert gas (Rasmussen, Ingle, Anderson, May 20, 1981). SSi also operated USTs, most if not all in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and acid wastewater neutralization. The two 2,000-gallon solvent waste storage tanks were in a concrete vault outside the northeast corner of the building, adjacent to the subject site, and the acid-related USTs were in concrete vaults in the service yard to the northwest of the building (Rasmussen, Ingle, Anderson, May 20, 1981). Avocet understands the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-TCA, xylenes, and isopropyl alcohol. SSi emptied the two solvent waste tanks on an as-needed basis using a vacuum truck. The hydrofluoric acid waste was neutralized onsite and discharged to the sanitary sewer system under a tiered "Permit by Rule" permit. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

Avocet personnel, while with previous companies, provided environmental consulting services to SSi and Texas Instruments, its successor in interest. In particular, Avocet personnel installed six groundwater monitoring wells at the former SSi facility and conducted periodic groundwater monitoring until 1996, when SSi decided to consolidate its manufacturing capabilities at another location, decommission its older manufacturing facilities in Tustin, and restore the building to its original condition. In particular, Avocet personnel investigated subsurface conditions after solvent waste from one of the USTs leaked into the secondary containment structure; however, impacts to the surrounding soil and groundwater were negligible. Pursuant to SSi's decision to close its Tustin facility, the USTs and other subsurface infrastructure were removed in 1996. Avocet personnel conducted confirmation soil matrix sampling in conveyance piping trenches and beneath the USTs and secondary containment vaults to evaluate the impact, if any, of SSi's operations on the subsurface environment. The confirmation soil matrix sampling results did not indicate the presence of significant soil impacts, and a final groundwater monitoring event in 1996 confirmed that groundwater had not been significantly impacted by SSi's operations or decommissioning

activities. The groundwater monitoring wells at the site were subsequently destroyed and the building was converted back to its original use as office space, and the building has operated as such since then.

Based on Avocet's past involvement at the former SSi property, there was never a suggestion that SSi's operations were likely to have impacted the subject site, which is hydraulically upgradient based on groundwater flow to the south.

5.5 Adjoining Properties to the Southeast

The site is bounded to the southeast by Myford Road, across which are additional commercial properties. From north to south, these properties include O'Neill Clothing and La Jolla Group at 14350 Myford Road and Access Lighting Corporation at 14410 Myford Road (Figure 2). O'Neill Clothing and La Jolla Group are apparel companies. Access Lighting Corporation manufactures lighting products for both indoor and outdoor household uses. The 14350 Myford Road address is not listed in any of the databases searched by EDR. While the company itself is not listed in any of the databases searched by EDR, the address of 14410 Myford Road is listed in the RCRA-SQG database under Unisen, Inc. However, none of the businesses or addresses mentioned above feature on the GeoTracker or EnviroStor websites, and absent additional information to the contrary, there is no reason to suspect that operations at these southeast-adjoining properties are likely to have impacted the subject site.

5.6 Adjoining Properties to the Northwest

The site is bounded to the northwest by PVP Advanced EO Systems at 14312 Franklin Avenue and Young's Market Company Express at 14352 Franklin Avenue. The 14312 Franklin Avenue address is listed in the RCRA-SQG, FINDS, ECHO, RCRA NonGen/NLR, CERS HAZ WASTE, HAZNET, CERS, and HWTS databases. These listings pertain to the generation of small quantities of hazardous waste, including oil-containing waste, organic solids, and various unspecified aqueous solutions. The 14352 Franklin Avenue address is listed in the RCRA-SQG database for the generation of hazardous wastes under Heads Up Industries, assumed to have been a previous occupant. Neither of the 14312 or 14352 Franklin Avenue addresses feature on the EnviroStor or GeoTracker websites, and absent additional information to the contrary, there is no reason to suspect that operations at these northwest-adjoining properties are likely to have impacted the subject site.

5.7 Other Nearby Properties

Based on readily available information, the following offsite properties are considered potentially relevant for Phase I ESA purposes.

5.7.1 Former Tungsten Carbide Manufacturing (TCM), 14451 Myford Road

The former TCM facility at 14451 Myford Road is located approximately 0.155 mile southwest of the subject site (Figure 2). The former TCM property, which was subsequently occupied by Pacific Bell and then AT&T, consists of two lots and is currently being redeveloped with a new warehouse. In the past, the property featured a building with a footprint of approximately

103,000 square feet, which TCM used to manufacture drilling equipment and tools for the oil exploration industry. Equipment used in TCM's manufacturing operations through the 1980s included at least four ovens, two grinding and drying systems, a spray booth, and a degreaser. In addition, TCM also stored waste oil in a 300-gallon UST and operated two industrial wastewater clarifiers, all of which were located outside the southwest wall of the building. The two clarifiers were used to remove solids from waste and process water prior to discharge to the sanitary sewer system.

In August 1986, TCM removed the waste oil UST and observed oily water and discolored soil with a strong hydrocarbon odor in the tank excavation. Approximately 100 gallons of oily water were reportedly removed from the tank excavation and transferred to 55-gallon drums for disposal. Soil samples collected from the UST excavation contained elevated concentrations of total petroleum hydrocarbons (TPH) and detectable concentrations of chlorinated volatile organic compounds (VOCs), notably tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1,1-TCA, and their degradation byproducts. Subsequent soil and groundwater investigations indicated that the chlorinated VOCs had likely leaked from the two wastewater clarifiers, which were removed in January 1988. The UST and clarifier removals were conducted with oversight from OCHCA; however, SARWQCB later became the lead regulatory agency. Additional soil and groundwater investigations indicated that releases from the wastewater clarifiers and the waste oil UST had impacted shallow, "perched" groundwater, which was encountered at around 12 feet bgs and which flowed to the south. Consistent with this groundwater flow direction, the investigations showed that VOCs had migrated offsite beneath the adjoining property to the southwest, at the time occupied by SSi and used as office space.

Remedial efforts related to the former UST and clarifiers included soil removal via open excavation, the application of Fenton's Reagent to oxidize contaminants in soil beneath the building, and the installation and operation of a groundwater extraction and treatment (GET) or "pump and treat" system to inhibit contaminant migration and remove contaminant mass. The GET system operated between 1993 and 2002 and reportedly treated approximately 51.5 million gallons of groundwater and removed 31 pounds of VOCs. The treated water was reinjected after being treated. The GET system was shut down in 2002 after it was determined that VOC mass removal rates had reached asymptotic levels and groundwater monitoring indicated the size of the plume had been significantly reduced. Prior to closing the case, the SARWQCB requested that groundwater monitoring continue for a year after shutting down the GET system and that TCM assess possible vertical migration by investigating a deeper water bearing zone. Based on results of the above, SARWQCB issued a "no further action" (NFA) letter for the soil and groundwater impacts attributable to the former waste oil UST and clarifiers on April 27, 2004. Pursuant to the NFA letter, TCM dismantled the GET system and destroyed all of the groundwater extraction, injection, and monitoring wells at the site and on the adjoining SSi property.

According to the available records, Pacific Bell, the predecessor to AT&T, purchased the property from TCM in late 1987, while the GET system was still in operation. Pacific Bell installed two 12,000-gallon USTs at the site; one for gasoline and one for diesel fuel, for its fleet vehicles. Pacific Bell and AT&T operated these two USTs, which were located outside the northeast wall of the building, until 2003, when they were permanently closed by removal. The removed USTs

were observed to be in good condition, no odors or other indications of leakage were noted, and confirmation soil samples from the tank excavation indicated that the USTs had not leaked. Pursuant to the confirmation soil sample results, OCHCA issued an NFA letter for the two fuel USTs on March 27, 2006.

In October 2019, Avocet investigated residual vadose zone contamination at the former TCM facility ahead of its acquisition by B8 Myford Industrial Owner, LLC. Although impacts to soil were negligible, PCE, TCE, and other VOCs were detected in soil vapor at concentrations that warranted a passive vapor intrusion mitigation system (VIMS) for the new building. Between August and October 2021, B8 Myford Industrial Owner, LLC cleared the site of the former TCM building and other improvements and rough graded ahead of redevelopment with an approximately 219,000-square-foot warehouse. In conjunction with this work, Avocet assessed TCM's backfilled remedial excavation around the former UST and wastewater clarifiers for residual soil contamination and also visited the site periodically during rough grading. In brief, residual soil impacts around the former UST and wastewater clarifiers were negligible and no impacts were observed elsewhere at the property, including around the two AT&T fuel USTs. Redevelopment is currently in progress with Avocet providing oversight of the VIMS installation.

The former TCM facility is located hydraulically downgradient and, as such, related impacts to soil and/or groundwater beneath the subject site are highly unlikely. Despite the intervening distance, however, it is conceivable that VOCs in soil vapor attributable to releases from TCM's operations could have migrated beneath the subject site, albeit probably not at concentrations that would warrant a VIMS for new building at the subject site.

5.7.2 Schick Moving and Storage, 2721 Michelle Drive

The Schick Moving and Storage (Schick) facility is located approximately 0.2 mile north-northeast of the subject site at 2721 Michelle Drive. In December 1996, with oversight from OCHCA and OCFA, Schick removed five USTs from the southwestern portion of the property: a 10,000-gallon UST for gasoline, two 10,000-gallon USTs for diesel fuel, a 550-gallon UST for waste oil, and a 550-gallon UST for fresh oil. Soil impacts were observed during the UST removals and groundwater accumulated in the tank excavations. Confirmation soil matrix samples collected in conjunction with the UST removals contained elevated concentrations of benzene and methyl *tert*-butyl ether (MTBE), based on which, OCHCA opened a cleanup case. In January 1997, impacted soil was over-excavated and the excavations were backfilled with clean imported material. The original tanks were replaced with one 20,000-gallon diesel UST and two 550-gallon oil USTs; however, the locations of these USTs are not clear (OCHCA, August 7, 2006).

Four groundwater monitoring wells (Wells W1 through W4) were installed after the excavation of impacted soil to monitor groundwater conditions at the property. Subsequent sampling of three of the wells (Wells W1, W3, and W4) indicated the presence of TPH in the gasoline range, MTBE, and benzene in groundwater, which was measured at between 11 and 13 feet bgs. OCHCA requested additional sampling to delineate the extent of MTBE in groundwater. In February 1998, six Hydropunch™ borings were advanced to 20 feet bgs around the perimeter of the former UST area. Benzene, ethylbenzene, xylenes, and MTBE were detected in Hydropunch™ groundwater

grab samples at concentrations up to 250, 1,000, 930, and 290 micrograms per liter (µg/L), respectively. In addition, groundwater samples from Wells W1 and W3 contained MTBE at 340 and 1,300 µg/L, respectively. Based on the results of this sampling, OCHCA requested further investigation and expressed a lack of confidence in the integrity of the existing monitoring wells, as they did not conform to California well construction standards. OCHCA required that the nonconforming wells be destroyed and replaced with three new groundwater monitoring wells. In response, Wells MW-5, MW-6, and MW-7 were installed to the southwest, north, and east of the former UST pit, respectively, and the four original wells were destroyed in 2002 (OCHCA, August 7, 2006).

Additional site assessment was conducted in November 2005 to further delineate impacts to groundwater downgradient of Well MW-5. In brief, four direct-push borings were advanced to the west, northwest, southeast, and southwest of Well MW-5 and grab groundwater samples were collected. No fuel-related contaminants were detected in the grab groundwater samples (The Reynolds Group [Reynolds], December 15, 2005). Wells MW-5, MW-6, and MW-7 were last sampled in January 2006. The groundwater results indicated that MTBE was present in downgradient Well MW-5 at a concentration of 125.9 µg/L (Reynolds, February 10, 2006). Based on these concentrations and the results of the direct-push investigation in 2005, OCHCA determined that contaminants in groundwater had been adequately delineated and that concentrations were low enough to meet California's "low threat closure policy" criteria and closed the case (OCHCA, August 7, 2006).

Considering the intervening distance and the relatively low concentrations of fuel-related hydrocarbons in groundwater, it is unlikely that the release at the Schick property has impacted the subject site. Avocet notes, however, that Schick apparently still operates USTs at its property.

5.7.3 Former Shipley Company, LLC, 2631 Michelle Drive

The former Shipley Company, LLC (Shipley) facility at 2631 Michelle Drive is located approximately 0.2 mile north of the subject site. The facility has been used for research and development of specialty electronic materials and for the distribution of products manufactured at another Shipley facility. The facility reportedly operated as a RCRA-permitted hazardous waste storage and treatment facility from the early 1990s to the early 2000s. In 2001, four areas of the property were sampled in connection with the closure of waste treatment and/or storage units operated under Permit-by-Rule. Based on the results of this sampling, OCHCA referred the site to DTSC for further review. DTSC identified ten areas at the property that required further investigation, including several underground features such as a clarifier, a UST for diesel fuel, a spill containment system, underground drainpipe and drainage system, and underground piping associated with a former UST that contained methyl ethyl ketone (MEK). Aboveground items included drum storage areas and various use areas within the buildings at the site. In 2003, a Preliminary Endangerment Assessment was conducted to evaluate the nature and extent of contamination in soil and/or groundwater beneath the property. In brief, soil samples were collected at 68 locations and low concentrations of several VOCs, including acetone, MEK, benzene, toluene, ethylbenzene, and xylenes, were detected in in the upper 5 feet. Groundwater grab samples were collected at nine locations throughout the property; however, no VOCs were

detected, with the exception of one detection of acetone (URS, April 30, 2003). The VOC concentrations in shallow soil beneath the property were determined to be elevated enough to pose a significant risk to potential sensitive receptors, and the property became subject to a Land Use Covenant in 2004. Under the Land Use Covenant, the property is restricted to commercial/industrial use based on the VOCs detected in shallow soil (Shipley Company, LLC, February 2, 2004). Considering the intervening distance and that no significant VOC concentrations were reported in groundwater, it is unlikely that operations at the Shipley property have impacted the subject site.

6.0 CONCLUSIONS

This section presents the conclusions of the Phase I ESA for the subject site in terms of sequentially numbered RECs, CRECs, HRECs, and OEFs, and the potential for vapor encroachment and/or vapor intrusion conditions at the site.

6.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site as follows:

- **REC 1 – Former Degreasers.** Permits issued by SCAQMD in 1980 indicate that Wespercorp, a former occupant, operated two vapor spray degreasers at the site starting in 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents. It is not clear where the two degreasers were located or how long they were used; however, solvent releases from vapor degreasers are common, including via liquid "drag-out" and as heavier than air vapors. Based on the possible presence of organic vapors in the subsurface, Avocet considers the former degreasers a REC.

6.2 CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

6.3 HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any HRECs at the site.

6.4 OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and redeveloping the site. OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified two OEFs at the site, sequentially numbered after the REC, as follows:

- **OEF 2 – Site-Wide POL Use.** Petroleum, oil, and lubricants (POLs) have been used in the workshop since Woodbridge Glass started operating at the site in 2003. The workshop currently features drums and smaller containers of used and fresh cutting oil and lubricating oil for machinery. Drums and smaller storage containers are stored largely with secondary containment, but Avocet did observe a few containers without secondary containment during the walkover survey. Minor staining was observed during Avocet's walkover survey throughout the interior of the workshop, which suggests that periodic, *de minimis* surface spills have occurred. However, there are no indications of larger or more significant spills and none of the surfaces in the vicinity of these areas are unpaved.

- **OEF 3 – ACMs and LBP.** The site was developed in or before 1980, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has since been extensively remodeled and SCAQMD records indicate at least some ACMs were abated in 2011. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs; however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if

necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

6.5 VAPOR INTRUSION/VAPOR ENCROACHMENT

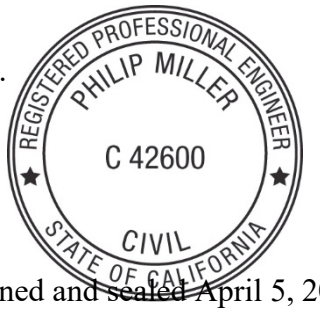

As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if VOCs are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that Wespercorp, a former occupant, operated two vapor spray degreasers at the site, a VIC cannot be ruled out, and as chlorinated solvents were released at the former TCM facility to the southwest, a VEC also cannot be ruled out without soil vapor sampling.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

Philip Miller, P.E.
Principal

Signed and sealed April 5, 2022

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

E-1. Looking southeast at northern entrance to site from Myford Road (01/26/2022).

E-2. Looking east at southern entrance to the site from Myford Road (01/26/2022).

E-3. Looking northeast at employee and visitor parking in front (southeast of) the building at the site (01/26/2022).

E-4. Looking southwest at outdoor storage of aluminum stock and wooden pallets along northwestern property boundary (01/26/2022).

E-5. Stacked storage containers in the northwest corner of the site (01/26/2022).

E-6. Empty waste bins in the southwest corner of the site (01/26/2022).

E-7. Woodworking area outside the southwest corner of the building (01/26/2022).

E-8. Inside three sided metal painting structure located outside the southwest corner of the building (01/26/2022).

E-9. Containers of paint and paint overspray inside the three-sided metal painting structure (01/26/2022).

E-10. Aluminum window frame manufacturing inside workshop (01/26/2022).

E-11. Laser metal cutting machine inside workshop (01/26/2022).

E-12. Metal cutting machines inside workshop (01/26/2022).

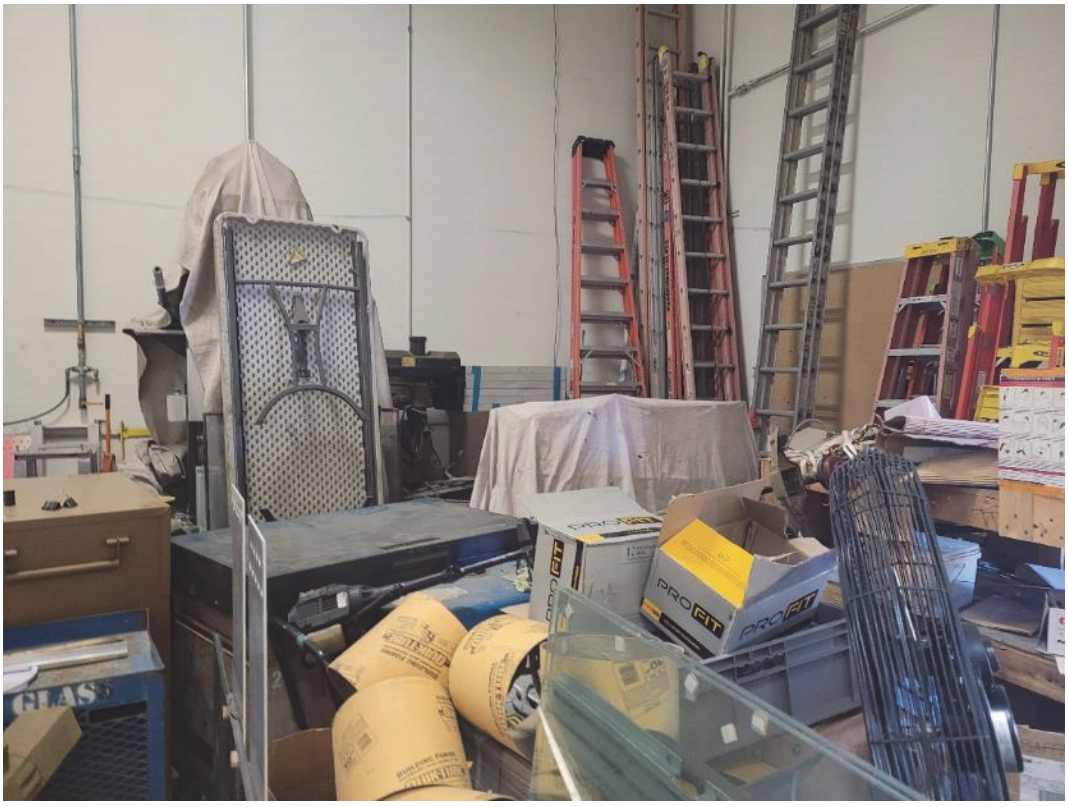

E-13. Bins for aluminum recycling inside the workshop (01/26/2022).

E-14. Drums and containers of cutting oil located on secondary containment trays inside the workshop (01/26/2022).

E-15. Inert gases and cutting oil drums in the workshop (01/26/2022).

E-16. Storage room inside southwest corner of the building (01/26/2022).

E-17. Storage of shop vacs, filing cabinets, and fire extinguishers (01/26/2022).

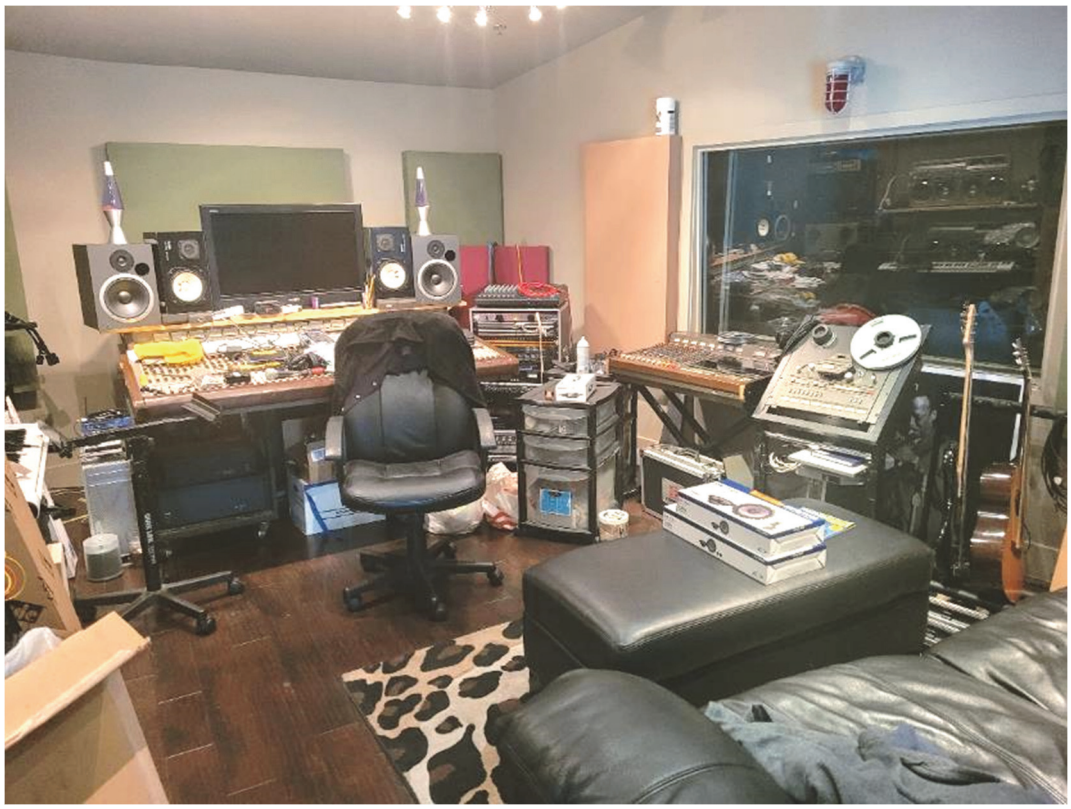

E-18. Storage cage located along eastern wall of the workshop area (01/26/2022).

E-19. Welding shop located in the northwest corner of the building (01/26/2022).

E-20. Office space located in the southeastern part of the building (01/26/2022).

E-21. Music studio located inside the building (01/26/2022).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly

known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 08/23/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 18 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 08/10/2021 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RADAR BOMB SCORING		WSW 1/2 - 1 (0.766 mi.)	U100	793

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TUSTIN MARINE CORPS		SW 1/2 - 1 (0.669 mi.)	0	52

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes: Returned to compliance on 10/15/2013. DTSC records indicate that hazardous waste has not been removed from this site since February 2012. Based on the amount of waste generated at this facility per Jeff and Ricardo, hazardous waste should be removed every 180 days (270 days if transported more than 200 miles). Several full 55 gallon drums of waste were observed on site today. Have the current waste removed by a registered hazardous waste hauler.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Your HMBEP has been declined, please revise and resubmit within 30 days. The EPA ID# is incorrect. The number that we have on file is CAL000378643. Please verify this and list the corrected number. For all the chemicals in your inventory your average daily amount, it should reflect how much you have on site during an average day, so if you keep your container half full your average daily amount would be 150 gallons. For your maximum daily amount it is the maximum amount of the chemical that you can have on site. So your maximum daily amount should be at least as much as your largest container. Please change your days on site to 365. For your chemical G Acetylene gasG please add the CAS# 74-86-2. For your chemical G ArgonG please change the CAS# to 7440-37-1. For your chemical G Isopropyl alcoholG please add the CAS# 67-63-0. For your chemical G Argon CO2 HeliumG please remove the main CAS# and add the mixture components with their CAS# and percent weight. [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD

TEXAS INSTRUMENTS INCORPORATED (Continued) **1000247345**

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 06-28-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Facility has complied with 2016 HMBEP reporting requirement. Reviewed HMBEP submittal on E-submit. Package was declined and an email sent to the facility contact. The following corrections are still needed: EMERGENCY PLAN Training G please indicate frequency of training (i.e. upon hire and annually thereafter) CHEMICAL INVENTORY An onsite inspection conducted on 8/18/2014 indicated that you also have propane on site at approximately 9 gallons total. Please add this material to your disclosure. Waste Paint Solids G this material is below the reporting threshold of 500 pounds and should be removed from your disclosure.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca.

N2 IMAGING SYSTEM LLC (Continued) **S118601266**

92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses. However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and checked trash cans at the site. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. Both buildings generate wastes but the EPA ID is tied to 14430 Myford Ave. Observed the following hazardous wastes stored on-site at 14430 above the reportable thresholds alone or when added to the amount stored at 14440 below: Acetone/IPA, 1-5 gallon bucket Grinding Blast Dust, 1-5 gallon bucket and 1-55 gallon drum at collection site. Waste Oily Water, 1-55 gallon drum Oily rags, 1-30 gallon drum Observed a wet grinder with resin chips/debris sitting in a tray at the end of the machine. If this material is considered non-hazardous the practice is acceptable. If the material is considered a hazardous waste and is being transferred to the hazardous waste storage area, then this be [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct a routine hazardous waste inspection. Consent to inspect and take photos if necessary was granted by Patrick Joyce, EH&S. No hazardous waste was observed in the dumpster on this date and no photos were taken. The following were observed stored at 14430 Myford Road: 55-gallon drum of spent coolant + 4 x 5-gallon buckets. The waste containers were observed not properly labeled. 3 x 55-gallon drums of water from the parts washer. Mr. Joyce stated that there is nothing added to the tap water in the process and that the residual is water with plastic particles. He stated that this facility does not have a discharge permit so they have chosen to containerize the waste water for offsite disposal by their hazardous waste transporter. There are two types of EDM machines in use at this facility. One uses oil as a dielectric fluid and the other uses water as a dielectric fluid. Both machine types have filtration systems. An employee in the machine room that [Truncated]

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 03-05-2019
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Based on a review of the California Environmental Reporting System (CERS) Website, this business has failed to complete the submittal for 2018 and 2019. Annual certification of CERS information is due between January 1 and March 1 each year. Please resubmit on CERS: G Every year between January 1 and March 1, AND G Within 30 days of change of ownerships, changes in chemical quantities of over 100%, or any new chemicals above the reporting threshold. G Hazardous materials must be reported if the business handles an amount equal to or greater than 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of compressed gas (1,000 cubic feet threshold for medical gases or gases for which the only health/physical hazards are simple asphyxiation and the release of pressure). As a result, violations have been cited against the facility. If you would like assistance, please email myself at this address and arrange an appointment. Continued failure to submit will [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses.

N2 IMAGING SYSTEMS LLC (Continued) **S113150841**

However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Other/Unknown
Eval Date: 05-01-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed and decline HMBEP submittal. The following corrections are needed: CHEMICAL INVENTORY Lead Acid Batteries G at 15% sulfuric acid, your battery electrolyte exceeds the threshold planning quantity of 1000 pounds for sulfuric acid, making this material and EHS. You will need to convert all amounts to pounds and check the EHS box under the Chemical Hazard Classification section. Chlorodifluoromethane G physical state and units must match G if the physical state is a gas, report all amounts in cubic feet. Diesel fuel G it is advised that you combine all diesel fuel into one submittal as this AgencyG s fee structure is based upon the number of chemicals disclosed. By reporting the diesel fuel in two separate disclosures, you have moved your facility into the next highest fee category. SITE MAP Please add the location of the following to your map: all building entrances and exits, shut-offs for gas, water and electrical.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 561847
Site Name: Aston Martin Newport Beach (Tustin Shop)
Violation Date: 08-11-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 08/12/2020. The Hazardous Materials Business Emergency Plan (HMBEP) has not been submitted on the CERS portal. Complete the HMBEP on CERS at https://cers.calepa.ca.gov and keep a copy on site.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 07-11-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Read/review pre 2015 HMBEP submission. Accepted pending review of the more recent submission.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-11-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous materials inspection. An inspection of the facility was completed with Kyle Tong. Observed the hazardous materials storage areas. The following reportable hazardous materials were observed today: - Motor oil - Waste oil - Waste antifreeze Reviewed and verified site map item locations.

Eval Type:	Other, not routine, done by local agency
Eval Notes:	hmbep conditionally accepted This submittal is being conditionally approved in order to facilitate transfer of data to California Electronic Reporting System (CERS) database. The facility will need to make the following revisions in CERS following notification of data transfer: Emergency Plan: Please elaborate on your emergency plan and employee training program. This is a crucial component to your submission for emergency first responders and the fire department. Employees should be trained annually and documentation should be kept for 3 years. Facility map: Please resubmit a PDF version of your 2 maps as we are unable to open these files. For further assistance please contact Justin Bechara at jbechara@ochca.com Thank you.

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff

SCHICK MOVING & STORAGE COMPAN (Continued) **U001577904**

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-08-2012
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: sunny and warm. SWPPP last revised 6/30/2003. Site plan needs to be updated to show relocated 55-gal drum and is missing drainage arrows. Found drain lines from compressor shed; discussed ensuring that blowdown is collected and disposed of. Spill kit found at fuel island. Has a sump pump/well in below-ground level loading dock fitted with a screen; the screen is in need of cleaning. Has an undocumented pipe outlet at NEC of building leaking clear water to ground.

Eval Date:	10-27-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a monitor certification and routine inspection. This site has 2 double walled fuel tanks with double wall pressurized piping and 2 dispensers. This site also has 1 double walled used oil tank and 1 double walled new oil tank with suction piping. All turbine sump sensors, fill sump sensors, annular sensors, and UDC sensors alarm on the Veeder Root. Verified turbine shut down, sensor-out, and fail-safe on the fuel tanks. Mechanical line leak detectors were tested and passed. Spill buckets were tested during the secondary containment testing completed today. The fuel tanks use flapper valves for overfill prevention. All technician certifications are current.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SHIPLEY COMPANY, LLC (Continued) **1000333198**

Waste Code: D011
Waste Description: SILVER

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

SHIPLEY COMPANY, LLC (Continued) **1000333198**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: U008
Waste Description: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U404
Waste Description: U404

CERS HAZ WASTE:
Name: PLAST-TIES JOHNSTON INTL CORP
Address: 14272 CHAMBERS RD
City,State,Zip: TUSTIN, CA 92780
Site ID: 518828
CERS ID: 10555549
CERS Description: Hazardous Waste Generator

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect granted by Mike Belz. Observed the shop area, waste storage area, perimeter of facility and trash container. Wastes include water based parts washer and universal waste lamps. The person who keeps the hazardous waste manifests is not available today. Submit current manifests to this agency for the parts washer and waste lamps. Complete the emergency response label and post in the facility.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-09-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine inspection. An inspection of the facility was completed with Carlos Contreras. Insta-Pak drums have been removed. One 7 gallon cylinder of propane for the forklift was observed. To remain exempt from the hazardous materials reporting requirements a maximum of only one 7 gallon cylinder of propane is allowed to be stored with no other hazardous materials at or above reporting thresholds stored on site. The hazardous materials program will be inactivated at this time.
Eval Division: Orange County Environmental Health

DUNCAN KITCHEN GRIPS INC (Continued) **S113772786**

Eval Notes:	Plast-Ties Johnston International Corporation 14272 Chambers Rd. Tustin, CA 92780 On site for a routine hazardous materials inspection. Consent to enter and inspect granted by Mike Belz. Observed the hazardous materials storage areas. The following hazardous materials were observed today: - Three 55 gallon drums of Instapak B resin - One 55 gallon drum of Instapak A resin - Two 7 gallon propane tanks for forklift (Approximately 240 cubic feet each) Chapter 6.95 of Division 20 of the California Health and Safety Code (H&SC) and Section 11022 of Title 42 of the United States Code contain the minimum requirements for hazardous material inventory reporting and data management. These regulations require businesses within this jurisdiction to complete a chemical inventory form to disclose hazardous materials stored, used, or handled on site. This disclosure information will assist emergency responders in planning for and handling emergencies involving hazardous [Truncated]

Address: 14242 CHAMBERS RD
City,State,Zip: TUSTIN, CA 92780
Site ID: 416170
CERS ID: 10563664
CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-19-2021
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This agency received the employee 2021 Hazcom Training signature log and RCRA Hazardous Waste Management certificate. Violation I239 abated. No outstanding violations.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-06-2013
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect granted by Doug Lamb. Observed the shop area, waste storage area, perimeter of facility and trash container. Drums of wastes are covered and labeled. Wastes include cutting coolant, resins, and lab-pack wastes. The person who keeps the manifests is not available today. Submit copies of manifests to this agency for the past 12 months. Complete the emergency response label and post in the facility. Verified the owner as Lightworks.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-03-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This business is under new ownership.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval Notes:	Your HMBEP has been declined, please revise and resubmit within 30 days. For all the chemicals in your inventory, for your average daily amount, it should reflect how much you have on site during an average day. For your maximum daily amount it is the maximum amount of the chemical that you can have on site. So your maximum daily amount should be at least as much as your largest container. For your chemicals G ArgonG and G NitrogenG please completely remove this chemical from your HMBEP because for these inert gases disclosure threshold is 1000 cubic feet and your gases fall under this. Revise site map into a file type that can be viewed. The .img format is not viewable. Try scanning into a .pdf format. If you have any questions please contact me at anesbit@ochca.com or 714-640-4249. Thank you

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Registry ID: 110070529592

Click Here:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Eval Type:	Other, not routine, done by local agency
Eval Notes:	Reviewed and declined HMBEP submittal. The following corrections are still needed: CHEMICAL INVENTORY Braxton Blend 4A, TFT-15 and A-407-E G you have indicated that there are no hazardous ingredients which would make this a non-hazardous material which would not require reporting. If the NFPA label has a 1 or higher number in any category, these are a hazardous material and must be reported. You have listed a Fire Code Hazard Class of either flammable or corrosive for these materials which does indicate that these are hazardous materials (and was also noted during your inspection as being a reportable hazardous material). Please contact the manufacturer to obtain a hazardous ingredients list. Deolube 120-aw G either identify the Proprietary ingredients by contacting the manufacturer or you may remove if this component is not hazardous. Propane G change Physical State to Liquid Oxygen G Storage Temperature should be Ambient unless the cylinder is heated.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

TUSTIN LEXUS (Continued) **1000597508**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS:
Name: TUSTIN LEXUS
Address: 45 AUTO CENTER DR
City,State,Zip: TUSTIN, CA 92782
Site ID: 178234
CERS ID: T10000000628
CERS Description: Leaking Underground Storage Tank Cleanup Site

Violations:
Site ID: 178234
Site Name: TUSTIN LEXUS
Violation Date: 05-22-2015
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes: Returned to compliance on 06/19/2015. The CFR was last submitted via the E-Submit Portal on 9/10/13. Please submit a current Certification of Financial Responsibility, with supporting documents, to an approved electronic reporting database within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 178234
Site Name: TUSTIN LEXUS
Violation Date: 01-21-2016
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to provide training regarding: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan.
Violation Notes: Returned to compliance on 02/08/2016. OBSERVATION: Failure to provide training regarding one or more of the following: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan. CORRECTIVE ACTION: Provide training in: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan.

the "hazardous materials" program. In September, 2013, this agency is scheduled to mail an official introduction to this business, of agency involvement. Following an electronic "paperless" information submission mandate, subject businesses will be required to submit hazardous materials disclosure information to this agency using an electronic "portal" mechanism. See the "e-submit" information available on the website for this agency (www.occupainfo.com). Currently, neither Steve Brunworth, nor Eddie Lopez, Parts Manager, were aware of any electronic forms information in either the E-Submit or the California "CERS" platform systems; all past information has been submitted using paper forms.

Eval Notes: Steve Brunworth, Shop Foremen, consented to/assisted with this haz waste compliance inspection. This automotive dealership site generates haz waste associated with automobile service/repair activities. Using a compliance checklist, I reviewed required haz waste record keeping and surveyed haz waste management: - haz waste containers appeared compatible with contents and in good condition; - haz waste containers appeared either empty of contents or were actively accumulating waste; - haz waste emergency G co-ordinatorG name/phone # posted for employee use; - containers of haz waste marked with required information and closed to prevent spillage; - haz waste hauled within allowable waste accumulation time limits; - no uncontained haz waste or floor waste accumulations observed. Note that the haz waste management correction items above also refer to a container used to accumulate spent gas/oil filters that do not qualify for the "drained used oil filter" [Truncated]

Eval Type:	Other, not routine, done by local agency
Eval Notes:	Review of UST submittal on CERS Portal, DECLINED. Spoke with Chris Mamoulelis and discussed changes needed for compliance. The following language was added to the submittal status: 6/4/2015: 1)CFR form needs signatures and dates. Mechanism type needs to be changed from Guarantee to CFO Letter. 2)Monitoring Plan form needs to include UST Monitoring Plan Training and Designated Operator Training. 3)Designated Operator Statement is expired. Update form to include valid expiration date for DO. 4)Site Plot Plan needs to include location of current monitoring panel, location of tank sensors, location of piping. Make the necessary corrections and re-submit for review. Contact Jeff Nofal with questions at 714-640-4512.

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a routine inspection and monitor certification. This site has 1 double walled unleaded tank with suction piping and 1 dispenser. The fill sump sensor, piping sump sensor, annular sensor, and UDC sensor were tested for alarm and dispenser shut down. The Veeder Root was tested for sensor-out and fail-safe. The overfill alarm was tested for 90 percent alarm. The spill bucket was tested and passed. The technician on site was Phillip Smith from Petrotech Service. Certifications are current including ICC and Veeder-Root. Secondary containment testing and overfill prevention equipment testing dated 8-13-18. Financial responsibility dated 8/14/18.

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site for a routine inspection and monitor certification. This site has 1 double walled unleaded tank with double walled suction piping and 1 dispenser. The fill sump sensor (#208), piping sump sensor (#208), annular sensor (#420), and UDC sensor (#208) were tested for alarms and dispenser shut down. The Veeder Root monitor was tested for sensor-out and fail-safe. The overfill alarm was tested and passed. The spill bucket will be tested during the secondary containment testing today. The technician was Philip Smith from Petrotech Service. Verified Veeder-Root and ICC certifications are current. Secondary containment last tested on 8/24/15. No priority alarms have occurred since the last monitor certification and inspection.

Eval Type:	Routine done by local agency
Eval Notes:	Steve Brunworth, Shop Foremen, consented to/assisted with this haz waste compliance inspection. This automotive dealership site generates haz waste associated with automobile service/repair activities. Using a compliance checklist, I reviewed required haz waste record keeping and surveyed haz waste management: - haz waste containers appeared compatible with contents and in good condition; - haz waste containers appeared either empty of contents or were actively accumulating waste; - haz waste emergency G co-ordinatorG name/phone # posted for employee use; - containers of haz waste marked with required information and closed to prevent spillage; - haz waste hauled within allowable waste accumulation time limits; - no uncontained haz waste or floor waste accumulations observed. Note that the haz waste management correction items above also refer to a container used to accumulate spent gas/oil filters that do not qualify for the "drained used oil filter" [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SCH:

Name: K-5 RAWLINGS SCHOOL
Address: RAWLINGS WAY/FAIRGATE DRIVE
City,State,Zip: TUSTIN, CA 92780
Facility ID: 30010003
Site Type: School Investigation
Site Type Detail: School
Site Mgmt. Req.: NONE SPECIFIED
Acres: 10
National Priorities List: NO
Cleanup Oversight Agencies: DTSC
Lead Agency: DTSC
Lead Agency Description: * DTSC
Project Manager: Not reported
Supervisor: Shahir Haddad
Division Branch: Southern California Schools & Brownfields Outreach
Site Code: 400789
Assembly: 68
Senate: 37
Special Program Status: Not reported
Status: No Further Action
Status Date: 03/16/2000
Restricted Use: NO
Funding: School District
Latitude: 33.73
Longitude: -117.8110
APN: NONE SPECIFIED
Past Use: AGRICULTURAL - ROW CROPS
Potential COC: DDT, DDT, DDE, DDD, Endrin, Lead
Confirmed COC: NONE SPECIFIED
Potential Description: SOIL
Alias Name: IRVINE COMMUNITY DEVELOPMENT COMPANY
Alias Type: Alternate Name

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/20/2021

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 05/18/2021
Date Data Arrived at EDR: 05/18/2021
Date Made Active in Reports: 08/03/2021
Number of Days to Update: 77

Source: Drug Enforcement Administration
Telephone: 202-307-1000
Last EDR Contact: 11/16/2021
Next Scheduled EDR Contact: 03/07/2022
Data Release Frequency: No Update Planned

HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005
Date Data Arrived at EDR: 08/03/2006
Date Made Active in Reports: 08/24/2006

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/18/2021

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 40

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/23/2021
Date Data Arrived at EDR: 08/10/2021
Date Made Active in Reports: 11/08/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

UTM Y (Meters):	3730988.5
Elevation:	71 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12014866 TUSTIN, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

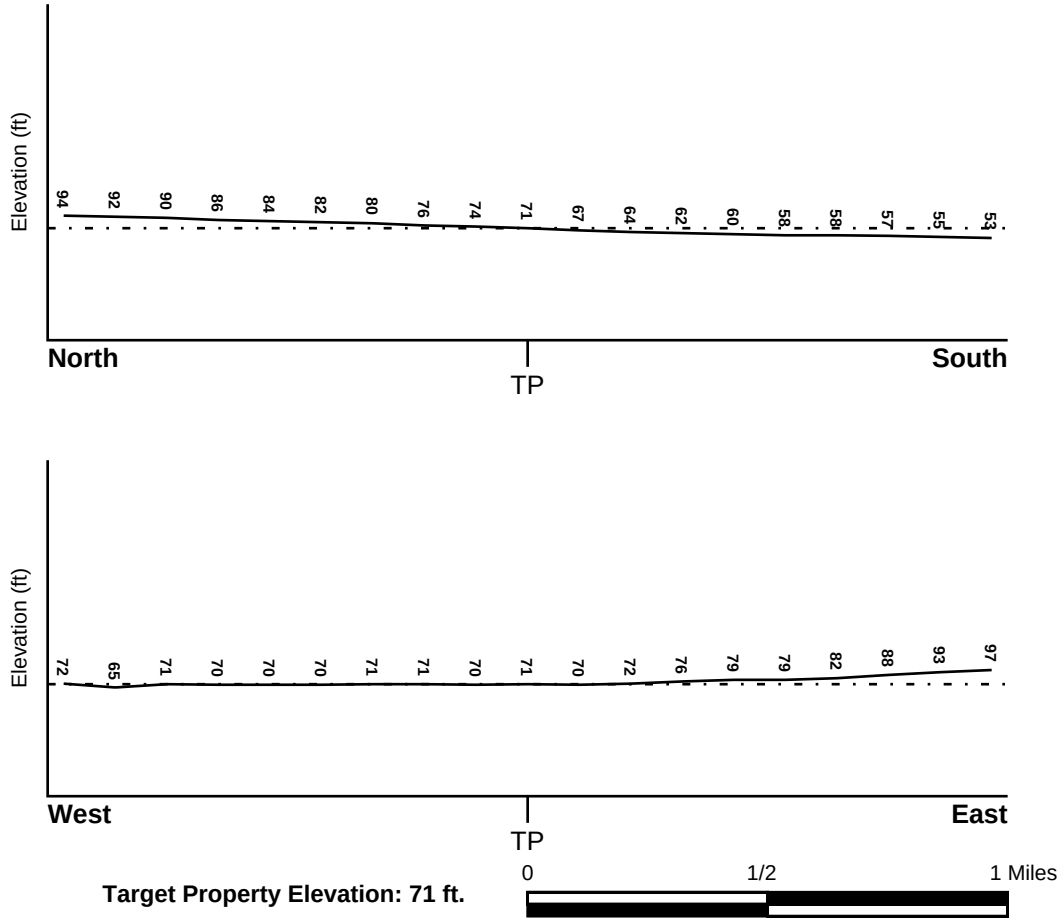

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 71 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0283J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06059C0277J	FEMA FIRM Flood data

06059C0279J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
TUSTIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/8 - 1/4 Mile SE	SE
A6	1/8 - 1/4 Mile SW	W
B11	1/4 - 1/2 Mile NNE	S

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
4G	1/8 - 1/4 Mile SE	SE
5G	1/8 - 1/4 Mile SW	W

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHINO

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	24 inches	59 inches	sandy clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: OMNI

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	11 inches	59 inches	silty clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Report Transmittal
Phase I Environmental Site Assessment
14351 Myford Road
Tustin, California 92780

Dear Mr. LeBlanc:

Transmitted herewith is a Phase I Environmental Site Assessment report for the approximately 3.67-acre property at 14351 Myford Road in Tustin, California. If you have any questions about the report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 102 or at pmiller@avocetenv.com.

Respectfully submitted,

EXECUTIVE SUMMARY

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.67-acre[1] property at 14351 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The primary objective of the Phase I ESA is to evaluate the history and current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have adversely impacted the underlying vadose zone and/or groundwater. Based on the site's history and current condition, "Recognized Environmental Conditions" (RECs), "Controlled RECs" (CRECs), and "Historical RECs" (HRECs), as defined in ASTM Standard E1527-21 (ASTM, 2021), and "other environmental features" (OEFs) have been identified. For Phase I ESA purposes, OEFs are defined as conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which Avocet believes warrant mention for visibility purposes in the context of acquiring and/or redeveloping the site. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger scale aerial photograph of the site is presented in Figure 3.

OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a two-story, multi-tenant office building with a footprint of approximately 41,500 square feet. According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	Area (Acres)	Address	Reported Owner
432-473-19	3.67	14351 Myford Road	Pacific Property Partners LLC

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the subject site had been developed with the existing building by 1979. Silicon Systems, Inc. (SSi) is believed to have been the first occupant, with the ground floor of the building built out as office and warehouse space and the second floor built out as office

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

space. By 1982, however, SSi had converted much of the ground floor into a wafer fab facility and had begun manufacturing silicon wafers, with related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers, cooling towers, air scrubbers, a deionized (DI) water system, and aboveground storage tanks for DI water, oxygen, hydrogen, and inert gas (Rasmussen, Ingle, Anderson, May 20, 1981). SSi also operated underground storage tanks (USTs), most, if not all, in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and acid wastewater neutralization. The two 2,000-gallon solvent waste storage tanks were in a concrete vault outside the northeast corner of the building, and the acid-related USTs were in concrete vaults in the service yard to the northwest of the building (Rasmussen, Ingle, Anderson, May 20, 1981). Avocet understands the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-trichloroethane, xylenes, and isopropyl alcohol. SSi emptied the two solvent waste tanks on an as-needed basis using a vacuum truck. The hydrofluoric acid waste was neutralized onsite and discharged to the sanitary sewer system under tiered "Permit by Rule" permit. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

Avocet personnel, while with previous companies, provided environmental consulting services to SSi and Texas Instruments, its successor in interest. In particular, Avocet personnel installed six groundwater monitoring wells at the site and conducted periodic groundwater monitoring until 1996, when SSi decided to consolidate its manufacturing capabilities at another location (in Santa Cruz, California), decommission its older manufacturing facilities in Tustin, and restore the building to its original condition. Pursuant to this decision, the USTs and other subsurface infrastructure at the site were removed in 1996. Avocet personnel conducted confirmation soil matrix sampling in conveyance piping trenches and beneath the USTs and secondary containment vaults to evaluate the impact, if any, of SSi's operations on the subsurface environment. The confirmation soil matrix sampling results did not indicate the presence of significant soil impacts, and a final groundwater monitoring event in 1996 confirmed that groundwater had not been impacted by SSi's operations or decommissioning activities. The groundwater monitoring wells at the site were subsequently destroyed and the building was converted back to its original use as office space and the building has operated as such since then.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site, as follows:

- **REC 1 – Possible VOCs in Soil Vapor.** SSi investigated the impact, if any, of its operations on the subsurface environment in the 1980s and 1990s, notably prior to vacating the site in 1996. Although no significant impacts to vadose zone soil or groundwater were identified, the possible presence of volatile organic compounds (VOCs) in soil vapor was not of concern in the 1990s and was not assessed. As such, Avocet considers the possible presence of VOCs in soil vapor, either from SSi's onsite operations and/or via migration from the adjoining former Tungsten Carbide Manufacturing (TCM) facility, a REC and recommends a limited soil vapor survey.

CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has identified two HRECs at the subject site, sequentially numbered after the REC, as follows:

- **HREC 2 – Former Waste Solvent USTs.** In the past, SSi accumulated solvent waste, primarily water, in two 2,000-gallon USTs in a concrete secondary containment vault outside the northeast corner of the building. Liquid that

accumulated in the secondary containment vault was attributed to both leaks from one of the USTs and infiltration of surface water into the vault. The original USTs were replaced in 1988 before ultimately being removed in 1996 as part of decommissioning the SSi facility. Although a "no further action" letter for the former USTs does not appear to have been issued, sampling conducted while the USTs were in operation and after their removal indicated that their impact on soil and groundwater had essentially been negligible and would not warrant regulatory agency involvement. As such, Avocet considers the two former vaulted solvent waste USTs to be an HREC.

- **HREC 3 – Former Acid Neutralization UST.** In the past, SSi neutralized acidic wastewater in a UST located outside the northwestern side of the building. During facility upgrades in 1990, sodium hydroxide solution was reportedly released from the UST into an open excavation. Subsequent soil matrix sampling did not indicate that the release had significantly impacted the subsurface in the vicinity of the UST and there were no significant groundwater quality changes. The leak in the UST was repaired and the UST was eventually removed along with other SSI subsurface infrastructure in 1996. As the available data would not warrant regulatory agency involvement, Avocet considers the former acid wastewater neutralization UST an HREC.

OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which may warrant mention in the context of acquiring and redeveloping the site. OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified three OEFs at the site, sequentially numbered after the REC and HRECs, as follows:

- **OEF 4 – Pad-Mounted Transformer.** The subject site features a pad-mounted electrical transformer inside the northeastern property boundary. The transformer is owned by Southern California Edison, but it is not known whether it contains or has contained polychlorinated biphenyls (PCBs). That said, Avocet did not observe any indications of oil leakage, PCB-containing or otherwise, on the transformer pad or the surrounding asphalt pavement.

- **OEF 5 – Emergency Generators.** Avocet observed two trailer-mounted emergency generators outside the northwest corner of the building during the walkover survey. The generators, which are assumed to be gasoline- or diesel-powered, appeared to be in good condition, with no visual or olfactory indications of leakage or spills on the surrounding pavement.

- **OEF 6 – ACMs and LBP.** The site was developed in or around 1979, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has

since been extensively remodeled and certain ACMs were abated when the SSi facility was decommissioned. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs; however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if VOCs are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that SSi used solvents, albeit nonchlorinated solvents, in its operations, a VIC cannot be entirely ruled out and as chlorinated solvents were released at the southwest adjoining former TCM facility, a VEC also cannot be ruled out without soil vapor sampling.

1.0 INTRODUCTION

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.67-acre[1] property at 14351 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger scale aerial photograph of the site is presented in Figure 3.

1.1 OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a two-story, multi-tenant office building with a footprint of approximately 41,500 square feet. According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	Area (Acres)	Address	Reported Owner
432-473-19	3.67	14351 Myford Road	Pacific Property Partners LLC

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the subject site had been developed with the existing building by 1979. Silicon Systems, Inc. (SSi) is believed to have been the first occupant, with the ground floor of the building built out as office and warehouse space and the second floor built out as office space. By 1982, however, SSi had converted much of the ground floor into a wafer fab facility and had begun manufacturing silicon wafers, with related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers, cooling towers, air scrubbers, a deionized (DI) water system, and aboveground storage tanks (ASTs) for DI water, oxygen, hydrogen, and inert gas (Rasmussen, Ingle, Anderson, May 20, 1981). SSi also operated underground storage tanks (USTs), most, if not all, in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

acid wastewater neutralization. The two 2,000-gallon solvent waste storage tanks were in a concrete vault outside the northeast corner of the building and the acid-related USTs were in concrete vaults in the service yard to the northwest of the building (Rasmussen, Ingle, Anderson, May 20, 1981). Avocet understands the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-trichloroethane (1,1,1-TCA), xylenes, and isopropyl alcohol (IPA). SSi emptied the two solvent waste tanks on an as-needed basis using a vacuum truck. The hydrofluoric acid waste was neutralized onsite and discharged to the sanitary sewer system under tiered "Permit by Rule" permit. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

Avocet personnel, while with previous companies, provided environmental consulting services to SSi and Texas Instruments, its successor in interest. In particular, Avocet personnel installed six groundwater monitoring wells at the site and conducted periodic groundwater monitoring until 1996, when SSi decided to consolidate its manufacturing capabilities at another location (in Santa Cruz, California), decommission its older manufacturing facilities in Tustin, and restore the building to its original condition. Pursuant to this decision, the USTs and other subsurface infrastructure at the site were removed in 1996. Avocet personnel conducted confirmation soil matrix sampling in conveyance piping trenches and beneath the USTs and secondary containment vaults to evaluate the impact, if any, of SSi's operations on the subsurface environment. The confirmation soil matrix sampling results did not indicate the presence of significant soil impacts, and a final groundwater monitoring event in 1996 confirmed that groundwater had not been impacted by SSi's operations or decommissioning activities. The groundwater monitoring wells at the site were subsequently destroyed and the building was converted back to its original use as office space, and the building has operated as such since then.

1.2 PHASE I ESA OBJECTIVES

The overall objective of the Phase I ESA documented herein is to assess the site in the context of the possible presence of potentially hazardous substances in the onsite structures and the documented presence of hazardous substances in soil and groundwater beneath the site. Specific objectives of the Phase I ESA are to:

- Document the history of the site in the context of the use, storage, handling, treatment, and disposal of potentially hazardous substances.
- Review and evaluate available information related to the investigation and remediation of known or suspected subsurface impacts.
- Assess the potential for previously unidentified hazardous substances to be present in the subsurface as a result of their past use, storage, handling, or disposal within or near the site.
- Identify "Recognized Environmental Conditions" (RECs), "Controlled" RECs (CRECs), and historical RECs (HRECs), as defined in ASTM Standard E1527-21 (ASTM, 2021).

- Identify "other environmental features" (OEFs), defined for Phase I ESA purposes as existing or former site features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which warrant mention for visibility purposes in the context of acquiring and redeveloping the site.

1.3 APPROACH

The subject Phase I ESA was conducted in general accordance with the scope and limitations of ASTM E1527-13 and E1527-21 (ASTM, 2013 and 2021) and included:

- A review of relevant background information, including the history of the site and adjacent properties, past land use, and regional hydrogeological conditions.
- A review of topographic maps, aerial photographs, and environmental records pertaining to the site.
- A walkover survey of the site and vicinity on January 26, 2022.
- A review of potential offsite sources of contamination that could adversely impact the subsurface environment beneath the site, including a search of regulatory agency databases and visual surveys of adjoining properties.

The format of this Phase I ESA report is different from that recommended by ASTM; however, all of the elements required by ASTM E1527-21 are included or otherwise addressed.

1.4 LIMITATIONS

This Phase I ESA was performed in general accordance with the scope and limitations of ASTM E1527-21 (ASTM, 2021) and the standard of care customary in the environmental consulting industry as of the date of this report. Key dates in the Phase I ESA process were as follows:

Key Phase I ESA Dates		
Task	**Responsible Party**	**Date**
Database Search	EDR	10/12/21
Site Inspection	Avocet	01/26/22

The conclusions in this Phase I ESA report are based on the information available to Avocet from the sources cited; however, Avocet makes no warranty regarding the accuracy or completeness of this information. Moreover, this Phase I ESA specifically excludes any evaluation of geotechnical conditions, seismicity, flooding hazards, or the possible impact (if any) of electromagnetic fields associated with onsite or nearby electrical facilities. Also, this report cannot and does not include any evaluation of undocumented activities at the site or on adjacent or nearby properties. The exclusions noted above should not be interpreted to mean that every other condition or potential condition has been considered in the subject Phase I ESA.

Avocet conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC for decision-making in the context of possibly purchasing and redeveloping the site for commercial/industrial purposes. B8 Myford II Industrial Owner LLC may rely upon the information in this Phase I ESA report until April 10, 2022, which is 180 days from the earliest of the key dates above. After April 10, 2022, certain components of this Phase I ESA should be updated, and after October 12, 2022, this Phase I ESA should be redone to maintain compliance with ASTM E1527 21 and EPA's AAI requirement. Avocet will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond these viability dates, or from unauthorized use by third parties.

1.5 Report Organization

Including the introduction, this report is organized into seven sections. Section 2.0 describes the various sources of information utilized in conducting the Phase I ESA. Section 3.0 presents a summary of relevant background and regional information. Section 4.0 describes the history and current condition of the site. Section 5.0 presents a summary of previous investigations at the site. Section 6.0 presents a summary of information gathered from a review of environmental databases maintained by local, state, and federal government agencies and describes the properties adjoining the site and selected nearby properties. Section 7.0 presents conclusions, in terms of identified RECs, CRECs, HRECs, and OEFs, and related recommendations.

Supporting information is contained in tables, figures, and six appendices, all of which follow the text of this report. Appendices A and B contain historical topographic maps and historical aerial photographs, respectively, annotated with the site boundary. Appendix C contains a Certified Sanborn® Map Report, although fire insurance map coverage of the site was not available. Appendix D is a City Directory report summarizing entries recorded in business, telephone, and other directories. Appendix E contains photographs of the site taken during Avocet's January 26, 2022 walkover survey. Appendix F is a report summarizing information available from a review of environmental databases maintained by local, state, and federal government agencies.

2.0 SOURCES OF INFORMATION

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps, historical aerial photographs, a walkover survey of the site, records available at selected local and state regulatory agencies, records already in Avocet's possession related to environmental work in the 1980s and 1990s, environmental databases maintained by local, state, and federal government agencies and other records available from commercial and online sources.

2.1 TOPOGRAPHIC MAPS

To evaluate the history of the site and past land uses, Avocet obtained copies of historical U.S. Geological Survey (USGS) topographic maps from EDR. The maps, which were published between 1896 and 2012 and which EDR marks up with the approximate site boundary, are included in chronological order in Appendix A.

2.2 AERIAL PHOTOGRAPHS

To further evaluate the site's history, Avocet obtained a "Decade Package" of historical aerial photographs from EDR. EDR's Decade Package typically includes at least one aerial photograph from each decade from the 1920s through the present day. For the subject project, EDR provided aerial photographs taken between 1938 and 2016. The photographs, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix B.

2.3 FIRE INSURANCE MAPS

At Avocet's request, EDR conducted a search for Sanborn® insurance map coverage of the site and vicinity; however, EDR reported that the site is an "unmapped property." A copy of EDR's report to that effect is included as Appendix C.

2.4 CITY DIRECTORIES

Telephone and business directories have been published for cities and counties across the United States since the 1700s and sometimes contain potentially useful information on past land uses and the types of business that operated at individual street addresses. EDR extracts information from such directories and consolidates it in its "EDR-City Directory Abstract," a copy of which is included as Appendix D to this report.

2.5 WALKOVER SURVEY AND INTERVIEWS

Avocet personnel conducted a walkover survey of the site and vicinity on January 26, 2022, escorted by the property manager, who has worked at the site since around 2012. Selected photographs taken during the walkover survey are included as Appendix E. During the walkover survey, Avocet interviewed the property manager about the site's recent past, in particular the storage and use of potentially hazardous substances and the generation of related hazardous wastes.

2.6 GOVERNMENT DATABASES

EDR conducted a government records search to document potential sources of contamination at or near the site. The search included databases maintained by federal, state, and local agencies for the site and for other properties within ASTM-standard radii of the site. The records search is summarized in Section 6.0 and a copy of "The EDR Radius Map™ Report with GeoCheck®" is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

2.7 RECORDS AVAILABLE ONLINE

Avocet searched the GeoTracker and EnviroStor websites maintained by the California Environmental Protection Agency (CalEPA) for additional environmental records pertaining to the subject site as well as records pertaining to selected nearby properties. Relevant information from this research is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.8 RECORDS IN AVOCET'S POSSESSION

While with previous companies, one of Avocet's principals investigated the subject site in the 1980s and 1990s, including periodic groundwater monitoring through 1996, when SSi terminated manufacturing operations and decommissioned its wafer fab. The records of those investigations, including plans and photographs of SSi's operations, were provided to Avocet and kept in storage until December 2021, when they were retrieved for the purposes of this Phase I ESA.

2.9 INFORMATION FROM REGULATORY AGENCIES

On October 12, 2021, Avocet contacted selected federal, state, and local regulatory agencies to determine whether they may have potentially relevant environmental records pertaining to the site, including, in particular, records relating to USTs, ASTs, environmental permits, enforcement orders, reports and correspondence related to site investigation/assessment, soil sampling, monitoring, cleanup/remediation, removal actions, closures, or any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Avocet's interactions with them were as follows:

- Avocet searched the EPA MyProperty online portal for records related to the subject site address. Avocet notes the MyProperty portal requires an exact, "letter by letter" address match, including abbreviations and punctuation, so Avocet searched for various forms of the 14351 Myford Road address. The EPA records, most of which pertain to hazardous waste generation, are referred to, as appropriate, throughout the remainder of this report.

- A written records request was emailed to the California Department of Toxic Substances Control (DTSC) office in Cypress. DTSC responded via email on October 14, 2021 with its scanned records as an attachment. The DTSC records are referred to, as appropriate, throughout the remainder of this report.

- A written records request was emailed to the Santa Ana Regional Water Quality Control Board (SARWQCB), which responded on October 14, 2021 that its records were limited to storm water management.

- An online records request form was submitted through the Orange County Health Care Agency (OCHCA) website. OCHCA responded on October 13, 2021 that the only record it possessed was a notation in an old database that showed that OCHCA conducted a UST removal inspection on September 22, 1995 toward the end of SSi's occupancy. OCHCA indicated it did not have records pertaining to the UST location, disposal, or any sampling; however, Avocet already had those records in storage.

- An online records request form was submitted through the Orange County Fire Authority (OCFA) website. OCFA responded on October 12, 2021 by sending a copy of an inspection report from December 8, 2010 that indicated no violations, permits, or chemicals were found.

- An online records request form was submitted through the Orange County Sanitation District (OCSD) website. In an email dated October 14, 2021, OCSD indicated it does not have any records pertaining to the subject site.

- A request form was submitted to South Coast Air Quality Management District (SCAQMD), which responded with records containing permitting and equipment lists for site operations. In brief, the available records did not indicate site conditions beyond what was already known from other records.

2.10 Oil and Gas Records

To assess the possible presence of oil and/or natural gas wells at or in the vicinity of the site, Avocet reviewed information available online from the California Geologic Energy Management Division (CalGEM). The findings of this review are summarized in Section 3.4.

2.11 Radon Gas Records

To assess the possible presence of naturally occurring radon gas in the subsurface in the site vicinity, Avocet reviewed data available through the EPA and the California Department of Public Health (CDPH). Radon gas data were also included in the EDR Radius Map Report (Appendix F). The available radon gas data are summarized in Section 3.5.

3.0 BACKGROUND AND REGIONAL INFORMATION

Background and regional information considered relevant to the subject Phase I ESA includes nearby surface water features, the site's physiographic setting, and regional geologic and hydrogeologic conditions.

3.1 PHYSIOGRAPHIC SETTING AND DRAINAGE

The subject property is located on the Coastal Plain of Orange County. The Coastal Plain covers approximately 350 square miles and is bounded by the Pacific Ocean to the west-southwest and consolidated rocks of the Chino and Puente hills to the north, the San Joaquin Hills to the south, and the Santa Ana Mountains to the east.

The ground surface in the site vicinity is at around 69 feet above mean sea level and generally slopes to the south southwest, toward Upper Newport Bay. The closest surface water body to the site is Irvine Channel, a concrete-lined drainage channel that passes within approximately 600 feet east of the site at its closest approach. However, Irvine Channel is not considered especially relevant for Phase I ESA purposes.

3.2 REGIONAL GEOLOGY

The site is located within the Los Angeles Basin, a geologic structure that evolved through five major phases: pre-depositional (basement rocks), pre-basin deposition (late Cretaceous through lower Miocene rocks), basin inception (middle Miocene), principal subsidence and deposition (upper Miocene and lower Pleistocene), and basin disruption (upper Pleistocene through Recent deposits). The basement rocks of the pre-depositional phase are composed of metamorphosed sedimentary and volcanic rocks, partially intruded by plutonic rocks. The upper Cretaceous rocks of the pre-basin phase of deposition are comprised of clastic marine sedimentary deposits beneath shallow marine and non-marine clastic sedimentary deposits of the Paleocene to early Miocene. The middle Miocene rocks of the basin-inception phase include a various succession of marine clastic and sedimentary rocks, interbedded with volcanic rocks. The late Miocene to early Pleistocene rocks of the principal subsidence and deposition phase are comprised of primarily sandstone and siltstone, with some conglomerate, shale, and fine-grained biogenic sediment. Finally, the late Pleistocene to recent rocks of the basin-disruption phase are comprised of lagoonal marine and non-marine deposits overlain by non-marine gravel, silt, and sand.

The Los Angeles Basin can be divided into four structural blocks, primarily designated by their basement blocks and superjacent sedimentary packages. The four blocks are referred to as the Northwestern, Southwestern, Northeastern, and Central Blocks. The subject site is located in the southeastern portion of the Central Block, which encompasses the area northwest of the Newport Inglewood Fault Zone, extending north to the Santa Monica Mountains, east to the Puente Hills, and southeast to the Santa Ana Mountains and San Joaquin Hills.

3.3 HYDROGEOLOGY

The subject site is located within the Orange County Groundwater Basin (the Basin), which underlies the Coastal Plain mentioned above. The Basin is divided into three regional subbasins: the Yorba Linda, Main, and Irvine subbasins. The site is located in the western portion of the Irvine subbasin and is bounded by the Santa Ana Mountains to the east, the San Joaquin Hills to the south and southwest, and the Costa Mesa Freeway to the north.

The Basin includes numerous aquifers separated to varying degrees by lower permeability sediments. Groundwater in these aquifers is utilized for municipal drinking and agricultural purposes, but most production wells in the Irvine area are screened deeper than 200 feet below ground surface (bgs). The uppermost, Shallow Aquifer System or "semiperched" aquifer, which extends from the surface to approximately 160 feet bgs, is more relevant for Phase I ESA purposes. Groundwater in the Shallow Aquifer System is generally considered hard and brackish and typically is not used directly for agricultural or municipal purposes, although there is evidence that it is in communication with deeper aquifers that have direct beneficial uses. Investigations by Orange County Water District related to its South Basin Groundwater Protection Project have shown that the Shallow Aquifer System is very complex in terms of the occurrence and movement of groundwater, both laterally and vertically. In brief, there are several relatively discrete water-bearing zones within 150 feet of the ground surface, with varying degrees of hydraulic communication between them. However, some of these water-bearing zones are laterally discontinuous, and the movement of groundwater is further complicated by the likely presence of buried stream channels filled with more permeable sediments that provide "paths of least resistance" for groundwater and contaminant migration. In broad terms, however, groundwater in the Shallow Aquifer System generally flows to the southwest, toward Upper Newport Bay.

Based on subsurface environmental investigations conducted at the subject site (Section 5.0), it is underlain by an approximately 10-foot layer of clay overlying silty sand. Another thin clay layer is present at approximately 25 feet bgs; however, this clay layer may be laterally discontinuous as it was only encountered in two of the well borings (D'Appolonia, July 11, 1983). Shallow groundwater was encountered at between 6 and 10 feet bgs and flows to the south-southwest (Geosystem Consultants, Inc., July 31, 1996).

3.4 OIL, GAS, AND GEOTHERMAL WELLS

According to CalGEM, records available online, the site is not within or near the administrative boundary of an oil field (CalGEM, October 11, 2021). The nearest oil well to the site is a "plugged dry hole" located approximately 1,000 feet to the east-southeast. According to the available records, the "Irvine 63-1" well was completed on June 18, 1949 but never produced any oil and was abandoned shortly after being drilled, on July 18, 1949 (CalGEM, August 10, 1949). No other oil or gas wells, abandoned or active, are located within 1 mile of the subject site. As such, it is unlikely that the subject site has been impacted by historical oil production operations in the area.

3.5 RADON GAS

EPA recommends avoiding long-term exposure to radon levels greater than 4 picocuries per liter (pCi/L). CDPH maintains indoor radon test result records for California sorted by zip code

(CDPH, February 2016). In brief, indoor radon measurements were performed throughout the state, and the percentage of buildings with reported radon levels greater than 4 pCi/L within each zip code was reported, along with the number of buildings tested. Of the 42 buildings tested for radon within the 92780 zip code in which the subject site is located, only one contained radon at above 4 pCi/L. In addition to the above, the EPA and the USGS maintain a Map of Radon Zones for the United States, organized by county (EPA, 2016). According to the map, Orange County is a Radon Zone 3, indicating that radon levels in buildings are expected to be below 2 pCi/L. EDR's Radius Map Report (Appendix F) indicates that the average radon activity on the ground floor of residential structures within Orange County was 0.763 pCi/L, which is less than EPA's recommended maximum exposure level. Based on the above, naturally occurring radon is unlikely to be of concern in the vicinity of the site.

4.0 SITE HISTORY AND CURRENT CONDITION

This section documents the history and current condition of the site, with emphasis on current or former environmental features.

4.1 SITE HISTORY

The history of the site and vicinity has been compiled based on information from the sources outlined in Section 2.0, particularly the historical aerial photographs and topographic maps. For discussion purposes, the site's history has been divided into sections based on the principal land uses with, to the extent known, the approximate date ranges.

4.1.1 Agricultural Land Use, <1938 to ~1979

The earliest records reviewed for Phase I ESA purposes were topographic maps published in 1896, 1901, and 1902 (Appendix A). These near identical maps show that the subject site was undeveloped, as was much of the surrounding area, although the area may have been agricultural at the time. Tustin is shown on the maps as a few dozen residences around the beginnings of a street grid approximately 0.8 mile to the northwest of the site. The Los Angeles branch of the Atchison, Topeka, and Santa Fe (AT&SF) Railway is shown running northwest-southeast, approximately 1 mile southwest of the site at its closest approach. Topographic maps published in 1932 and 1935 (Appendix A) show that the street grid had been expanded outward from "downtown" Tustin, and many of the existing roads, including Myford Road, were depicted, although Myford Road's alignment was different, and it did not yet extend as far west as the subject site. Rather, the site appears to have been in an area (known to have been agricultural from a 1938 aerial photograph) bounded by dirt roads. A portion of historical Highway 101 ran along the existing Santa Ana (5) Freeway alignment, approximately 0.5 mile northeast of the site. Irvine Channel, now a concrete-lined drainage channel, is shown on the 1932 and 1935 maps as an unlined channel, although its alignment does not appear to have changed significantly since then. The larger Peter's Canyon Wash is shown on both maps flowing northeast to southwest, approximately 0.4 mile southeast of the site at its closest approach. Small structures, assumed to have been residential or agricultural, were scattered throughout the area, with two structures shown just outside the southwestern site boundary. Based on subsequent maps and aerial photographs, one of these structures is believed to have been a reservoir, at least part of which was aboveground based on the shadow it cast in the photographs.

The earliest aerial photograph reviewed for Phase I ESA purposes was taken in 1938 (Appendix B) and shows that the site and surrounding area were agricultural. More specifically, the site included parts of two larger fields planted with grass or other ground crop(s). To the southwest of the site, the reservoir depicted as a structure in the 1932 and 1935 topographic maps is visible in the 1938 photograph. Further afield, Highway 101 was visible to the northeast of the site and the AT&SF Railway was visible to the southwest. The unlined precursor to present day Irvine Channel was also visible in the 1938 photograph. A topographic map published in 1942 (Appendix A) provides no additional information of use for Phase I ESA purposes, but an aerial photograph taken in 1946 (Appendix B) clearly shows that the site and the surrounding area were still planted with grass or

other ground crop(s) with a dirt road splitting the site into northwestern and southeastern portions. The reservoir was clearly visible to the west-southwest of the site, as was a tall adjacent feature that could have been a wind turbine to power the well pump or a power pole. To the south of "old" Myford Road, then still unpaved, vegetation patterns suggest that Peters Canyon Wash periodically flooded.

Topographic maps published in 1948 and 1950 (Appendix A) show that the site was still unimproved and not accessible by paved roads. The street grid around the site had not evolved much, but to the west, on the far side of the AT&SF railroad track, a Naval Reservation had been constructed. Established in 1942 and originally known as the Naval Lighter Than Air (NLTA) Station, the Naval Reservation featured two huge "blimp" hangars that have since become local landmarks. Avocet notes that the NLTA was commissioned during World War II to support the United States Navy's coastal patrol effort and operated as such until 1949. The facility was reactivated in 1951 as Marine Corps Air Facility Santa Ana to support the Korean War. More recently, it became known as Marine Corps Air Station Tustin and operated as a helicopter base. Aerial photographs taken in 1952, 1963, and 1972 (Appendix B) show no significant change in land use within or around the site apart from Irvine Channel being rerouted into Peters Canyon Wash approximately 1.5 miles southeast of the site between 1952 and 1963.

Although not visible in the aerial photographs, topographic maps published in 1965 and 1972 (Appendix A) show a water well immediately southwest of the subject site and annotates an adjacent structure as "*Res*" for reservoir. The 1965 and 1972 maps show that the well and the reservoir were accessed via a dirt road from Myford Road, which also was unpaved. Two tall, slender structures located adjacent to the reservoir and visible in the 1952 photograph are assumed to have been wind turbines or power poles. To the northeast of the site, Highway 101 had been widened and renamed the Santa Ana (5) Freeway by 1965.

4.1.2 Silicon Systems, Inc. (SSi), 1979 - 1996

By 1979, the site had been developed with the existing two-story building and was leased to SSi. A topographic map published in 1981 (Appendix A) shows a few commercial or industrial buildings on nearby lots but does not show the existing building, although it had been constructed by this time. The 1981 map shows the present-day Myford Road alignment but also shows the original Myford Road, since replaced by Jamboree Road, to the southeast. Avocet understands that for a time there were references to "old" and "new" Myford Road, but these prefixes appear to have been dropped when Jamboree Road replaced "old" Myford Road. The 1981 map shows that Walnut Avenue to the southwest ended at Myford Road and did not continue to the southeast as it does today.

The ground floor of the building originally was built out as office and warehouse space; however, by 1982, SSi had converted much of the ground floor into a wafer fab facility and had begun manufacturing silicon wafers. In brief, the wafer fab was inside the original building footprint; however, SSi installed related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers; cooling towers; air scrubbers; ASTs for oxygen, hydrogen, and inert gas; a deionized water system; and an acid wastewater neutralization pit (Rasmussen,

Ingle, Anderson, May 20, 1981). SSi also operated USTs, most, if not all, in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and acid wastewater neutralization. In particular, there were two 2,000-gallon solvent waste storage tanks in a concrete vault outside the northeast corner of the building and the 5,000-gallon hydrofluoric acid UST was in a concrete vault in the service yard to the northwest of the building (Rasmussen, Ingle, Anderson, May 20, 1981). Avocet understands the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-TCA, xylenes, and IPA. The two solvent waste tanks were emptied on an as-needed basis via a vacuum truck. The hydrofluoric acid waste was neutralized onsite under Permit by Rule and discharged to the sanitary sewer system through an industrial wastewater clarifier. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

An aerial photograph taken in 1985 (Appendix B) shows the recently constructed SSi building and the wafer fab support facilities in the exterior service yard. The remainder of the site was paved for parking or landscaped. Although difficult to discern from the 1985 aerial photograph, but depicted on the 1981 map in Appendix A, a single railroad track ran along the rear (northwestern) boundary of the site, although SSi never used it. The lot to the northeast of the subject site had been developed with the existing building, now occupied by Woodbridge Glass (Figure 2), by 1985; however, the adjoining lot to the southwest was undeveloped. Beyond this undeveloped lot, the former Tungsten Carbide Manufacturing (TCM) facility had also been built by 1985. As discussed in Section 6.4, chlorinated solvents released at the former TCM facility in the 1980s impacted soil and shallow groundwater; however, the TCM facility was and is hydraulically downgradient of the subject site. Beyond the former TCM facility was an office building on the northeast corner of Walnut Avenue and Myford Road that was also later leased to SSi. The 1985 photograph shows that the land on the southeast side of (new) Myford Road was still agricultural at the time, as was the land further to the southeast.

An aerial photograph taken in 1989 (Appendix B) shows the subject site outwardly unchanged, although inside the building, SSI, in 1986, converted 2,000 square feet of office space for manufacturing. The 1989 photograph shows that the southwest-adjoining, previously undeveloped lot had been paved for parking and was being used by Pacific Bell, which by then had purchased the former TCM facility, for employees and service truck parking. SSi further expanded its manufacturing and service yard areas in 1990, with the latter visible in an aerial photograph taken in 1994 (Appendix B).

Because of rapid advances in wafer fabrication technology, SSI decided to consolidate its manufacturing capabilities at another location (in Santa Cruz, California), decommission its manufacturing facilities in Tustin, and restore the wafer fab area to its original condition. Avocet personnel, while with another company, were involved in decommissioning and demolishing the wafer fab area and collecting soil matrix samples to assess possible vadose zone impacts in 1996 (Section 5.6). This change in site usage is evident in an aerial photograph taken in 2002 (Appendix B), which shows the service yard had been removed and the cleared area paved for parking.

4.1.3 Office and Warehouse Space, 1996 - Present

After SSi vacated the site, EDR's City Directory abstract (Appendix D) indicates the building became a multi-tenant facility whose occupants included:

- Integrium, LLC and the Orange County Research Center in 2005
- Integrium, LLC, the Orange County Research Center, Armstrong Distributors, IC2 Holdings, Memorial Research Medical, David Smith MD, and Ultra Escrow in 2010
- Epinex Diagnostics Laboratory, Memorial Research Medical, OCM Bancorp, Resilient Communications, and Ultra Escrow in 2014
- Orange County Research Center, Resilient Communications, and Ultra Escrow in 2017

Aerial photographs taken in 2002, 2005, 2009, 2012, and 2016 (Appendix B) and a topographic map published in 2012 (Appendix A) provide no additional data of relevance for Phase I ESA purposes. However, the aerial photographs show that the formerly agricultural land on the opposite side of Myford Road was developed with the existing commercial/industrial buildings between 1994 and 2002 and the 261 Toll Road had been constructed to the southeast by 2002.

4.2 CURRENT SITE CONDITIONS

Avocet conducted an escorted walkover survey of the site on January 26, 2022 to visually assess current conditions. Selected photographs taken during the survey are included in Appendix E and are referenced, as appropriate, below. In brief, the subject site features the approximately 41,500-square-foot former SSi building with parking lots to the west and to the east (Figure 3).

4.2.1 Outdoor Areas

The site is accessible via two driveways from Myford Road in the northeast and southeast corners (Photographs E-1 and E-2), and roughly the western half of the site features paved parking (Photograph E-3). Waste and recycling bins are staged in the southwestern corner of the site along with a storage container (Photographs E-4 and E-5). Avocet was not able to access the storage container during the walkover survey. Two backup generators are located outside the northwestern corner of the building (Photograph E-6). The diesel-powered generators are trailer-mounted, with diesel fuel stored in integral ASTs. Avocet notes that the files received from SCAQMD included permits for the backup generators. Avocet did not observe any staining around the generators or other visual or olfactory indications that diesel fuel has leaked from the generators or the integral ASTs. In addition to the above, the property features a pad-mounted electrical transformer inside the northern site boundary (Photograph E-7). The transformer appeared to be in good condition and there were no signs of staining on the pavement surrounding it.

4.2.2 Offices and Classrooms

The building at the site houses multiple tenants that use most, if not all, of their space for office purposes (Photograph E-8). The current tenants within the building are as follows:

- Magnitude Lighting
- IC2Net Data Center
- Signum Digital Pro
- Arete Financial Group
- Epinex Diagnostics
- OC Research Center
- Integrium
- Fidelity Tax Relief
- Epic Cosplay Wigs
- Briviant, Inc.
- Goodnature
- Freedom LRS

Of the above, Magnitude Lighting, IC2Net Data Center, Arete Financial Group, Epinex Diagnostics, and OC Research Center are located on the first floor of the building. As stated previously, all of the above businesses utilize their spaces mainly for office purposes. Exceptions include Magnitude Lighting, IC2Net Data Center, and OC Research Center. Magnitude Lighting works on electronics and has desks set up with soldering equipment and the like (Photograph E-9). IC2Net Data Center operates three server rooms (Photograph E-10). OC Research Center conducts clinical research and trials out of its location. Specifically, its space features six examination rooms, storage space for medical supplies, and a room for processing blood samples (Photographs E-11, E-12, and E-13). OC Research Center produces small amounts of medical waste, such as sharps and biohazard waste, from patient samples. This waste is transported offsite by a licensed waste handler. The floors in the tenant spaces are either carpeted or feature varying colors and patterns of vinyl floor tile, all of which were generally in good condition. Similarly, the interior paint in the building was generally in good condition, with no signs of peeling.

4.3 ASTM E1527-13 Features

ASTM E1527-21 includes a list of potential environmental features, such as USTs, ASTs, sumps, and the like, that are to be addressed in a Phase I ESA for a commercial or industrial property. The presence or absence of these features is summarized below.

Potential Environmental Feature or Condition	Absent	Present	Comments
Hazardous substances and petroleum products in connection with identified uses	✓		Absent but present in the past during SSi's occupancy
Storage tanks	✓		Absent but present in the past during SSi's occupancy
Strong, pungent, or noxious odors and their sources	✓		
Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products	✓		

Potential Environmental Feature or Condition	Absent	Present	Comments
Drums, totes, and intermediate bulk containers	✓		Absent but present in the past during SSi's occupancy
Hazardous substance and petroleum product containers not in connection with identified uses	✓		
Unidentified substance containers	✓		
Polychlorinated biphenyl (PCB)-containing items	✓		None known or observed
Heating/Cooling		✓	Heating and cooling systems assumed
Stains or corrosion on floors, walls, or ceilings (except water stains)	✓		
Drains and sumps	✓		
Pits, ponds, or lagoons	✓		
Stained soil or pavement	✓		
Stressed vegetation (other than from lack of water)	✓		
Solid waste	✓		Municipal solid waste and sharps from OC Research Center. Section 4.2.2
Water/wastewater	✓		None other than sanitary wastewater
Wells	✓		Former groundwater monitoring wells all destroyed
Septic systems or cesspools	✓		

5.0 PREVIOUS INVESTIGATIONS AND REMEDIATION

Environmental investigation has been conducted previously at the subject site to assess what impacts, if any, were caused by SSI operations. These activities are discussed below.

5.1 GROUNDWATER MONITORING, 1983 - 1996

SSI operated two solvent waste storage USTs and additional USTs for hydrofluoric acid waste storage, acid waste mixing, and acid waste neutralization. The approximate locations of these tanks are shown in Figure 3. To assess and monitor the integrity of the USTs and gather data on groundwater depth and flow direction, D'Appolonia Consulting Engineers, Inc. (D'Applonia) installed five groundwater monitoring wells (Wells W-1 through W-5) in 1983 and a sixth (Well MW-7) was installed in 1988. Avocet notes that a leak detection monitoring port inside the concrete vault for the solvent waste USTs was later designated "Well MW-6." The approximate locations of Wells W-1 through W-7 are shown in Figure 3. The results of the first round of groundwater monitoring event did not indicate that any of the USTs at the site had leaked (D'Appolonia, July 11, 1983). Regular groundwater monitoring continued until SSi ceased operations at the site in 1996, and the groundwater monitoring wells have since been destroyed. Throughout the monitoring program, there were no analytical data that suggested leaks from any of the USTs at the site and impacts to groundwater, to the extent there were any, were negligible.

5.2 RELEASE OF SOLVENT WASTE TO TANK VAULT, 1987

In 1987, measurements in the monitoring port in the concrete secondary containment vault for the solvent waste USTs indicated water was accumulating. SSi investigated the water accumulation and attributed it to infiltrating rainwater and/or irrigation water from nearby planters. In April 1987, during a routine removal of accumulated solvent waste, SSI noted that fluid was slowly seeping into and accumulating in one of the USTs. The inflow of fluid was attributed to water in the secondary containment vault leaking into the UST between two spot-welds near the UST invert. The leaking UST was taken out of service and solvent wastewater was temporarily accumulated only in the other UST. To assess whether solvent waste could have leaked out of one or both of the USTs, into the vault, and impacted groundwater, SSi collected samples from the vault and from Well W-2, located adjacent to the USTs. Acetone, 1,1,1-TCA, IPA, and xylenes were all detected in the vault sample; however, only 1,1,1-TCA was detected in the groundwater sample from Well W-2, at a concentration of 160 micrograms per liter (µg/L). Well W-2 was resampled a few weeks later and only 1,1,1-TCA was detected, at a concentration of 30 µg/L (Geosystem Consultants, Inc., June 30, 1987). Avocet notes these 1,1,1-TCA concentrations in groundwater were both below the drinking water Maximum Contaminant Level (MCL) of 200 µg/L.

5.3 WASTE SOLVENT STORAGE TANK REPLACEMENT, 1988

In March 1988, the two solvent waste USTs were removed and replaced with new, double-walled USTs. In conjunction with the removal of the original USTs, SSi collected samples of liquid in the USTs, liquid in the secondary containment vault, and the pea gravel backfill in the vault. A groundwater sample was also collected from nearby Well W-2. In brief, the liquid sample from

inside the UST contained methanol, IPA, acetone, 1,1,1-TCA, ethylbenzene, and xylenes, all of which were consistent with the nature of the solvent waste reportedly discharged to the tanks. The liquid sample from inside the vault contained IPA, 1-butanol, acetone, 1,1,1-TCA, ethylbenzene, and xylenes. The presence of these compounds in the vault fluid suggested leakage or overfilling of the waste solvent USTs had occurred in the past. The pea gravel backfill contained the same compounds as the liquids in the USTs and in the vault, which further suggested that leaks had occurred from one or both USTs in the past or that overfilling had occurred. The groundwater sample collected from Well W-2 contained acetone at a concentration of 70 µg/L, 1,1-dichloroethylene (1,1-DCE) at 1.1 µg/L, and 1,1,1-TCA at 7.5 µg/L. It was suspected that laboratory contamination had occurred due to the high acetone concentration, so another groundwater sample was collected from Well W-2. The second sample did not contain detectable concentrations of acetone, but contained 1,1-DCE and 1,1,1-TCA at concentrations of 1.1 and 4.9 µg/L, respectively. The sampling results suggested that the integrity of the USTs may have been compromised or that overtopping of the tanks had occurred. However, the USTs were removed and replaced, which removed the threat of a continuous source (Geosystem Consultants, Inc., March 28, 1988).

5.4 Sampling and Analysis of Waste Solvent UST Vault, 1989

In conjunction with replacing the solvent waste USTs, the secondary containment vault was also retrofitted with a one-piece fiberglass cover to preclude surface water infiltration. No more liquid was reported in the vault until January 1989, when SSi personnel observed accumulated liquid. A sample of the liquid in the vault contained 11 volatile organic compounds (VOCs), notably including 1,1,1-TCA and xylenes. The VOC concentrations in the liquid sample were lower than would be expected if the liquid had been released from the USTs, and it was assumed that VOCs were being leached from the concrete walls and floor of the vault (Geosystem Consultants, Inc., March 2, 1989). Measurements in nearby Wells W-2 and W-7 indicated that the water table was below the base of the secondary containment vault, thereby ruling out groundwater infiltration as a potential source.

5.5 Acid Neutralization Tank Release, 1990

In December 1990, during facility modifications, an apparent leak from a sodium hydroxide AST was observed during open excavation work. SSi personnel collected a sample of the water that accumulated in the bottom of the excavation and retained Geosystem Consultants, Inc. to investigate the impact the leak had on the subsurface. On December 27, 1990, three soil matrix samples were collected from the floor of the tank excavation. A water sample collected from the excavation contained a high sodium concentration and a high pH, indicating that sodium hydroxide solution may have seeped from the neutralization tank. However, the analyses of the three soil samples indicated that soil around the neutralization tank had not been significantly impacted by either the caustic release or seepage from the tank, which may have occurred prior to the excavation. Consequently, it was concluded that it was unlikely groundwater had been impacted by any releases from the tank (Geosystem Consultants, Inc., February 22, 1991).

5.6 WAFER FAB DEMOLITION, 1996

Because of rapidly evolving wafer fab technology, SSI decided to consolidate its manufacturing operations at another location, decommission its older manufacturing facilities in Tustin, and restore the vacated area to its original condition of office and warehouse space. Soil and groundwater samples were collected during decommissioning and demolition activities to evaluate the impact, if any, of SSi operations on the subsurface. Soil samples were collected at the approximate locations shown in Figure 3. The sample locations corresponded with utility trenches that accommodated pipes that transferred chemicals from the service yard to the fab area and wastewater from the fab area to the various USTs, a former wastewater clarifier, a former tank vault behind the building that previously housed a hydrofluoric acid storage tank, and the former tank vault for the waste solvent USTs. In brief, only 10 of the 17 soil samples collected contained detectable concentrations of any analytes, including acetone, styrene, 2-butanone, methyl ethyl ketone (MEK), and/or total xylenes. None of the concentrations were considered indicative of a significant release from any of the SSi infrastructure. In addition to soil sampling, one final groundwater monitoring event was conducted for the six wells onsite to document groundwater conditions after SSi operations had ceased and all potentially hazardous materials were removed from the site. In brief, the analytical results from the final groundwater monitoring event were either below drinking water MCLs or within what would be considered background levels for groundwater in the vicinity of the site. The groundwater monitoring wells at the site were subsequently destroyed in accordance with California guidance (Geosystem Consultants, July 31, 1996).

6.0 ADJOINING AND NEARBY PROPERTIES

This section summarizes a search by EDR of environmental databases and describes properties adjoining the subject site and selected nearby properties. The descriptions of adjoining and selected nearby properties are based on Avocet's familiarity with a few properties in the area, observations from public rights-of-way, information included in EDR's report (Appendix F), and information available from the GeoTracker and EnviroStor websites maintained by CalEPA.

6.1 DATABASE LISTINGS

EDR's search encompassed over 90 databases maintained by local, state, and federal government agencies, including all of the databases required to be searched per ASTM E1527-21 §8.2.2. The target property address of 14351 Myford Road was used for records search purposes.

EDR's October 12, 2021 Radius Map Report with GeoCheck®, which is included in Appendix F, identifies multiple database listings for the site and for offsite properties within ASTM-recommended search radii. These listings are summarized in Table 1, but in the interest of providing a concise review and making relevant information more accessible, the following summaries focus on those database listings considered potentially relevant to the objectives of the subject Phase I ESA, specifically those pertaining to the subject site and to nearby properties with documented hazardous substance releases with the potential to have impacted the site. Other properties/database listings not considered indicative of a hazardous substance release, database listings for hydraulically downgradient properties, and database listings with "Completed – Case Closed" status have generally been screened out. It is noted in this regard that inclusion in certain of the databases searched by EDR is not, in and of itself, an indication that hazardous substances have been released or that the subsurface beneath the properties is contaminated. For example, inclusion in the HAZNET or similar databases indicates that a facility generates hazardous waste, but the generator is following the proper manifest procedures. Similarly, the fact that USTs or ASTs are or were operated at a property and were registered with the state is not, in and of itself, of concern unless the tanks(s) had leaked, in which case the property should be included in other databases.

6.2 TARGET PROPERTY LISTINGS

Spelling errors and/or different uses of abbreviations and punctuation often result in multiple listings in the same databases. The database listings for the target property addresses, complete with spelling errors, are as follows:

Address	Company	Database	Comment
14351 Myford Road	Texas Instruments Incorporated	FINDS	Pertains to past air emissions regulated by the Toxics Release Inventory System (TRIS)
		ECHO	Pertains to the site's listing in other government databases
14321 & 14351 Myford Road	Silicon Sys Corp	EMI	Pertains to permitted air emissions, inc. total organic hydrocarbon gases, NOX, and SOX
14351 Myford Rd	Silicon Systems	UST	Pertains to one or more unspecified USTs
		SWEEPS UST	Pertains to two 2,000-gallon USTs, erroneously listed as containing motor vehicle fuel
14351 Meford Rd	Silicon Systems Inc.	HIST UST	Pertains to one or more unspecified USTs
14351 Myford Rd	Texas Instruments Incorporated	HAZNET	Pertains to the generation of liquids containing halogenated organic compounds, unspecified acidic and alkaline solutions, PCBs, waste oil, asbestos-containing waste, and unspecified laboratory waste chemicals from 1993 to 2001
		HWTS	Pertains to hazardous waste generator number CAD064469679
14351 Myford Rd	Orange County Research Center	HAZNET	Pertains to the generation and transportation of pharmaceutical waste and off-spec organics in 2011
		HWTS	Pertains to hazardous waste generator number CAC002673656
14351 Myford Rd	Texas Instruments Incorporated	RCRA-SQG	Pertains to the generation of ignitable, corrosive, and other hazardous wastes between 1992 and 2001
		ENVIROSTOR	Pertains to a tiered permit, believed to be for acid wastewater neutralization
		HIST UST	Pertains to three former USTs for waste storage by SSi
		CA FID UST	Pertains to one or more unspecified USTs
		CHMIRS	Pertains to an accidental release of silane gas from a line that leaked during a cylinder change
		CIWQS	Pertains to former permitted stormwater management

In brief, the target property listings summarized above are consistent with Avocet's understanding of the site's history and none suggest site conditions or features beyond those documented elsewhere in this report.

6.3 Adjoining Properties to the Northeast

The site is bounded to the northeast by a multi-tenant commercial building at 14321 Myford Road (Figure 2). The 14321 Myford Road address is listed in the RCRA NonGen/NLR, HAZNET, HWTS, FINDS, ECHO, CERS HAZ WASTE, HAZNET, CERS, and EMI databases. The hazardous waste listings refer to the generation and offsite disposal of small quantities of hazardous waste by Woodbridge Glass-Werner Systems, Inc. (Woodbridge Glass), a manufacturer

of windows for commercial buildings. The aluminum window frames are manufactured at 14321 Myford Road and are then transported to another location to insert the glass. Woodbridge Glass uses small amounts of gasoline and diesel fuel onsite for generators and forklifts, in addition to cutting oil for metal cutting, petroleum-based lubricants for machine parts, and inert gases to operate some of its machinery. The EMI database listing was for regulated air emissions from SSi operations. Reportedly, SSi occupied the property at 14321 Myford Road, in addition to the subject site, until 2003. Avocet understands that SSi used the property as office space only and did not have any manufacturing operations at 14321 Myford Road. As such, the EMI database listing may actually pertain to the subject site. Regardless, and absent additional information to the contrary, there is no reason to suspect that historical or ongoing operations at 14321 Myford Road have impacted the subsurface environment beneath the subject site.

6.4 ADJOINING PROPERTIES TO THE SOUTHWEST

The site is bounded to the south by the former TCM facility at 14451 Myford Road (Figure 2). The former TCM property, which was subsequently occupied by Pacific Bell and then AT&T, consists of two lots and is currently being redeveloped with a new warehouse. In the past, the lot immediately adjacent to the subject site was paved for parking and storage, but the second lot to the southwest featured a building with a footprint of approximately 103,000 square feet. The second lot was developed in or around 1976 by TCM, which used it to manufacture drilling equipment and tools for the oil exploration industry. Equipment used in TCM's manufacturing operations through the 1980s included at least four ovens, two grinding and drying systems, a spray booth, and a degreaser. In addition, TCM also stored waste oil in a 300-gallon UST and operated two industrial wastewater clarifiers, all of which were located outside the southwest wall of the building. The two clarifiers were used to remove solids from waste and process water prior to discharge to the sanitary sewer system.

In August 1986, TCM removed the waste oil UST and observed oily water and discolored soil with a strong hydrocarbon odor in the tank excavation. Approximately 100 gallons of oily water were reportedly removed from the tank excavation and transferred to 55-gallon drums for disposal. Soil samples collected from the UST excavation contained elevated concentrations of total petroleum hydrocarbons (TPH) and detectable concentrations of chlorinated VOCs, notably tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1,1-TCA, and degradation byproducts 1,1-dichoroethane, 1,1-DCE, and *cis*-1,2-dichloroethylene. Subsequent soil and groundwater investigations indicated that the chlorinated VOCs had likely leaked from the two wastewater clarifiers, which were removed in January 1988. The UST and clarifier removals were conducted with oversight from OCHCA; however, SARWQCB later became the lead regulatory agency. Additional soil and groundwater investigations indicated that releases from the wastewater clarifiers and the waste oil UST had impacted shallow, "perched" groundwater, which was encountered at around 12 feet bgs and which flowed to the south. Consistent with this groundwater flow direction, the investigations showed that VOCs had migrated offsite beneath the adjoining property to the southwest, at the time occupied by SSi and used as office space.

Remedial efforts related to the former UST and clarifiers included soil removal via open excavation, the application of Fenton's Reagent to oxidize contaminants in soil beneath the building, and the installation and operation of a groundwater extraction and treatment (GET) or

"pump and treat" system to inhibit contaminant migration and remove contaminant mass. The GET system operated between 1993 and 2002 and reportedly treated approximately 51.5 million gallons of groundwater and removed 31 pounds of VOCs. The treated water was reinjected after being treated. The GET system was shut down in 2002 after it was determined that VOC mass removal rates had reached asymptotic levels and groundwater monitoring indicated the size of the plume had been significantly reduced. Prior to closing the case, SARWQCB requested that groundwater monitoring continue for a year after shutting down the GET system and that TCM assess possible vertical migration by investigating a deeper water-bearing zone. Based on results of the above, SARWQCB issued a "no further action" (NFA) letter for the soil and groundwater impacts attributable to the former waste oil UST and clarifiers on April 27, 2004. Pursuant to the NFA letter, TCM dismantled the GET system and destroyed all of the groundwater extraction, injection, and monitoring wells at the site and on the adjoining SSi property.

According to the available records, Pacific Bell, the predecessor to AT&T, purchased the property from TCM in late 1987, while the GET system was still in operation. Pacific Bell installed two 12,000-gallon USTs at the site; one for gasoline and one for diesel fuel, for its fleet vehicles. Pacific Bell and AT&T operated these two USTs, which were located outside the northeast wall of the building, until 2003, when they were permanently closed by removal. The removed USTs were observed to be in good condition, no odors or other indications of leakage were noted, and confirmation soil samples from the tank excavation indicated that the USTs had not leaked. Pursuant to the confirmation soil sample results, OCHCA issued an NFA letter for the two fuel USTs on March 27, 2006.

In October 2019, Avocet investigated residual vadose zone contamination at the former TCM facility ahead of its acquisition by B8 Myford Industrial Owner, LLC (B8 Myford). Although impacts to soil were negligible, PCE, TCE, and other VOCs were detected in soil vapor at concentrations that warranted a passive vapor intrusion mitigation system (VIMS) for the new building. Between August and October 2021, B8 Myford cleared the site of the former TCM building and other improvements and rough graded ahead of redevelopment with an approximately 219,000-square-foot warehouse. In conjunction with this work, Avocet assessed TCM's backfilled remedial excavation around the former UST and wastewater clarifiers for residual soil contamination and also visited the site periodically during rough grading. In brief, residual soil impacts around the former UST and wastewater clarifiers were negligible and no impacts were observed elsewhere at the property, including around the two AT&T fuel USTs. Redevelopment is currently in progress, with Avocet providing oversight of the VIMS installation.

The former TCM facility is located hydraulically downgradient and, as such, related impacts to soil and/or groundwater beneath the subject site are highly unlikely. Despite the intervening distance, however, VOCs in soil vapor attributable to releases from TCM's operations could have migrated beneath the subject site, albeit probably not at concentrations that would warrant a VIMS for new buildings at the subject site.

6.5 Adjoining Properties to the Southeast

The site is bounded to the southeast by Myford Road, across which are additional commercial properties. From north to south, these properties include O'Neill Clothing and La Jolla Group at

14350 Myford Road and Access Lighting Corporation at 14410 Myford Road. O'Neill Clothing and La Jolla Group are apparel companies. Access Lighting Corporation manufactures lighting products for both indoor and outdoor household uses. The 14350 Myford Road address is not listed in any of the databases searched by EDR. While the company itself is not listed in any of the databases searched by EDR, the address of 14410 Myford Road is listed in the RCRA-SQG database under Unisen, Inc. However, none of the businesses or addresses mentioned above feature on the GeoTracker or EnviroStor websites, and absent additional information to the contrary, there is no reason to suspect that operations at these southeast-adjoining properties are likely to have impacted the subject site.

6.6 ADJOINING PROPERTIES TO THE NORTHWEST

The site is bounded to the west by Young's Market Company Express at 14352 Franklin Avenue. The 14352 Franklin Avenue address is listed in the RCRA-SQG database for the generation of hazardous wastes under Heads Up Industries, assumed to have been a previous occupant. However, the street address does not feature on the EnviroStor or GeoTracker websites maintained by CalEPA, and absent additional information to the contrary, there is no reason to suspect that operations at 14352 Franklin Avenue are likely to have impacted the subject site.

6.7 OTHER NEARBY PROPERTIES

Based on readily available information, the following nearby properties are considered potentially relevant for Phase I ESA purposes.

6.7.1 Schick Moving and Storage, 2721 Michelle Drive

The Schick Moving and Storage (Schick) facility is located approximately 0.4 mile north-northeast of the subject site, at 2721 Michelle Drive. In December 1996, with oversight from OCHCA and OCFA, Schick removed five USTs from the southwestern portion of the property: a 10,000-gallon UST for gasoline, two 10,000-gallon USTs for diesel fuel, a 550-gallon UST for waste oil, and a 550-gallon UST for fresh oil. Soil impacts were observed during the UST removals and groundwater accumulated in the tank excavations. Confirmation soil matrix samples collected in conjunction with the UST removals contained elevated concentrations of benzene and methyl *tert*-butyl ether (MTBE), based on which, OCHCA opened a cleanup case. In January 1997, impacted soil was over-excavated and the excavations were backfilled with clean imported material. The original tanks were replaced with one 20,000-gallon diesel UST and two 550-gallon oil USTs; however, the locations of these USTs are not clear (OCHCA, August 7, 2006).

Four groundwater monitoring wells (Wells W1 through W4) were installed after the excavation of impacted soil to monitor groundwater conditions at the property. Subsequent sampling of three of the wells (Wells W1, W3, and W4) indicated the presence of TPH in the gasoline range, MTBE, and benzene in groundwater, which was measured at between 11 and 13 feet bgs. OCHCA requested additional sampling to delineate the extent of MTBE in groundwater. In February 1998, six Hydropunch™ borings were advanced to 20 feet bgs around the perimeter of the former UST area. Benzene, ethylbenzene, xylenes, and MTBE were detected in Hydropunch™ groundwater grab samples at concentrations up to 250, 1,000, 930, and 290 µg/L, respectively. In addition, groundwater samples from Wells W1 and W3 contained MTBE at 340 and 1,300 µg/L,

respectively. Based on the results of this sampling, OCHCA requested further investigation and expressed a lack of confidence in the integrity of the existing monitoring wells, as they did not conform to California well construction standards. OCHCA required that the nonconforming wells be destroyed and replaced with three new groundwater monitoring wells. In response, Wells MW-5, MW-6, and MW-7 were installed to the southwest, north, and east of the former UST pit, respectively, and the four original wells were destroyed in 2002 (OCHCA, August 7, 2006).

Additional site assessment was conducted in November 2005 to further delineate impacts to groundwater downgradient of Well MW-5. In brief, four direct-push borings were advanced to the west, northwest, southeast, and southwest of Well MW-5 and grab groundwater samples were collected. No fuel-related contaminants were detected in the grab groundwater samples (The Reynolds Group [Reynolds], December 15, 2005). Wells MW-5, MW-6, and MW-7 were last sampled in January 2006. The groundwater results indicated that MTBE was present in downgradient Well MW-5 at a concentration of 125.9 µg/L (Reynolds, February 10, 2006). Based on these concentrations and the results of the direct-push investigation in 2005, OCHCA determined that contaminants in groundwater had been adequately delineated and that concentrations were low enough to meet California's "low threat closure policy" criteria and closed the case (OCHCA, August 7, 2006).

Considering the intervening distance and the relatively low concentrations of fuel-related hydrocarbons in groundwater, it is unlikely that the release at the Schick property has impacted the subject site. Avocet notes, however, that Schick apparently still operates USTs at its property.

6.7.2 Former Shipley Company, LLC, 2631 Michelle Drive

The former Shipley Company, LLC (Shipley) facility at 2631 Michelle Drive is located approximately 0.43 mile north of the subject site. The facility has been used for research and development of specialty electronic materials and for the distribution of products manufactured at another Shipley facility. The facility reportedly operated as a RCRA-permitted hazardous waste storage and treatment facility from the early 1990s to the early 2000s. In 2001, four areas of the property were sampled in connection with the closure of waste treatment and/or storage units operated under Permit-by-Rule. Based on the results of this sampling, OCHCA referred the site to DTSC for further review. DTSC identified ten areas at the property that required further investigation, including several underground features such as a clarifier, a UST for diesel fuel, a spill containment system, underground drainpipe and drainage system, and underground piping associated with a former UST that contained MEK. Aboveground items included drum storage areas and various use areas within the buildings at the site. In 2003, a Preliminary Endangerment Assessment was conducted to evaluate the nature and extent of contamination in soil and/or groundwater beneath the property. In brief, soil samples were collected at 68 locations and low concentrations of several VOCs, including acetone, MEK, benzene, toluene, ethylbenzene, and xylenes, were detected in the upper 5 feet. Groundwater grab samples were collected at nine locations throughout the property; however, no VOCs were detected, with the exception of one detection of acetone (URS, April 30, 2003). The VOC concentrations in shallow soil beneath the property were determined to be elevated enough to pose a significant risk to potential sensitive receptors, and the property became subject to a Land Use Covenant in 2004. Under the Land Use

Covenant, the property is restricted to commercial/industrial use based on the VOCs detected in shallow soil (Shipley Company, LLC, February 2, 2004). Considering the intervening distance and that no significant VOC concentrations were reported in groundwater, it is unlikely that operations at the Shipley property have impacted the subject site.

7.0 CONCLUSIONS

This section presents the conclusions of the Phase I ESA for the subject site in terms of sequentially numbered RECs, CRECs, HRECs, and OEFs and the potential for vapor encroachment and/or vapor intrusion conditions at the site.

7.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site, as follows:

- **REC 1 – Possible VOCs in Soil Vapor.** SSi investigated the impact, if any, of its operations on the subsurface environment in the 1980s and 1990s, notably prior to vacating the site in 1996. Although no significant impacts to vadose zone soil or groundwater were identified, the possible presence of VOCs in soil vapor was not of concern in the 1990s and was not assessed. As such, Avocet considers the possible presence of VOCs in soil vapor, either from SSi's onsite operations and/or via migration from the adjoining former TCM facility, a REC and recommends a limited soil vapor survey.

7.2 CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

7.3 HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has identified two HRECs at the subject site, sequentially numbered after the REC, as follows:

- **HREC 2 – Former Waste Solvent USTs.** In the past, SSi accumulated solvent waste, primarily water, in two 2,000-gallon USTs in a concrete secondary containment vault outside the northeast corner of the building. Liquid that accumulated in the secondary containment vault was attributed to both leaks from one of the USTs and infiltration of surface water into the vault. The original USTs were replaced in 1988 before ultimately being removed in 1996 as part of decommissioning the SSi facility. Although an NFA letter for the former USTs does not appear to have been issued, sampling conducted while the USTs were in operation and after their removal indicated that their impact on soil and groundwater had essentially been negligible and would not warrant regulatory agency involvement. As such, Avocet considers the two former vaulted solvent waste USTs to be an HREC.

- **HREC 3 – Former Acid Neutralization UST.** In the past, SSi neutralized acidic wastewater in a UST located outside the northwestern side of the building. During facility upgrades in 1990, sodium hydroxide solution was reportedly released from the UST into an open excavation. Subsequent soil matrix sampling did not indicate the release had significantly impacted the subsurface in the vicinity of the UST and there were no significant groundwater quality changes. The leak in the UST was repaired and the UST was eventually removed along with other SSI subsurface infrastructure in 1996. As the available data would not warrant regulatory agency involvement, Avocet considers the former acid wastewater neutralization UST an HREC.

7.4 OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and redeveloping the site. OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified three OEFs at the site, sequentially numbered after the REC and HRECs, as follows:

- **OEF 4 – Pad-Mounted Transformer.** The subject site features a pad-mounted electrical transformer inside the northeastern property boundary. The transformer is owned by Southern California Edison, but it is not known whether it contains or has contained PCBs. That said, Avocet did not observe any indications of oil leakage, PCB-containing or otherwise, on the transformer pad or the surrounding asphalt pavement.

- **OEF 5 – Emergency Generators.** Avocet observed two trailer-mounted emergency generators outside the northwest corner of the building during the walkover survey. The generators, which are assumed to be gasoline- or diesel-powered, appeared to be in good condition, with no visual or olfactory indications of leakage or spills on the surrounding pavement.

- **OEF 6 – ACMs and LBP.** The site was developed in or around 1979, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has since been extensively remodeled and certain ACMs were abated when the SSi facility was decommissioned. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs; however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

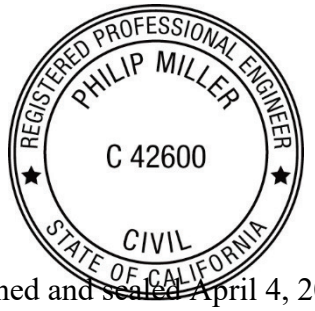

7.5 VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if VOCs are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that SSi used solvents, albeit nonchlorinated solvents, in its operations, a VIC cannot be entirely ruled out, and as chlorinated solvents were released at the southwest-adjoining former TCM facility, a VEC also cannot be ruled out without soil vapor sampling.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

Philip Miller, P.E.
Principal

Signed and sealed April 4, 2022

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 5E9A-420C-9390

PO # 1713.001

Project 14351 Myford Road

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5E9A-420C-9390

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Avocet Environmental, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 4

RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 21 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 05/17/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 10 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no

longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 19 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 10/15/2013. DTSC records indicate that

WOODBRIDGE GLASS INC (Continued) **S113772323**

hazardous waste has not been removed from this site since February 2012. Based on the amount of waste generated at this facility per Jeff and Ricardo, hazardous waste should be removed every 180 days (270 days if transported more than 200 miles). Several full 55 gallon drums of waste were observed on site today. Have the current waste removed by a registered hazardous waste hauler.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Your HMBEP has been declined, please revise and resubmit within 30 days. The EPA ID# is incorrect. The number that we have on file is CAL000378643. Please verify this and list the corrected number. For all the chemicals in your inventory your average daily amount, it should reflect how much you have on site during an average day, so if you keep your container half full your average daily amount would be 150 gallons. For your maximum daily amount it is the maximum amount of the chemical that you can have on site. So your maximum daily amount should be at least as much as your largest container. Please change your days on site to 365. For your chemical G Acetylene gasG please add the CAS# 74-86-2. For your chemical G ArgonG please change the CAS# to 7440-37-1. For your chemical G Isopropyl alcoholG please add the CAS# 67-63-0. For your chemical G Argon CO2 HeliumG please remove the main CAS# and add the mixture components with their CAS# and percent weight. [Truncated]

Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: OBSERVATION: The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. CORRECTIVE ACTION: Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019

N2 IMAGING SYSTEM LLC (Continued) **S118601266**

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses. However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On-site and met with Kim Stevenson, HR Manager, and walked through the facility and checked trash cans at the site. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. Both buildings generate wastes but the EPA ID is tied to 14430 Myford Ave. Observed the following hazardous wastes stored on-site at 14430 above the reportable thresholds alone or when added to the amount stored at 14440 below: Acetone/IPA, 1-5 gallon bucket Grinding Blast Dust, 1-5 gallon bucket and 1-55 gallon drum at collection site. Waste Oily Water, 1-55 gallon drum Oily rags, 1-30 gallon drum Observed a wet grinder with resin chips/debris sitting in a tray at the end of the machine. If this material is considered non-hazardous the practice is acceptable. If the material is considered a hazardous waste and is being transferred to the hazardous waste storage area, then this be [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct a routine hazardous waste inspection. Consent to inspect and take photos if necessary was granted by Patrick Joyce, EH&S. No hazardous waste was observed in the dumpster on this date and no photos were taken. The following were observed stored at 14430 Myford Road: 55-gallon drum of spent coolant + 4 x 5-gallon buckets. The waste containers were observed not properly labeled. 3 x 55-gallon drums of water from the parts washer. Mr. Joyce stated that there is nothing added to the tap water in the process and that the residual is water with plastic particles. He stated that this facility does not have a discharge permit so they have chosen to containerize the waste water for offsite disposal by their hazardous waste transporter. There are two types of EDM machines in use at this facility. One uses oil as a dielectric fluid and the other uses water as a dielectric fluid. Both machine types have filtration systems. An employee in the machine room that [Truncated]

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-18-2016

N2 IMAGING SYSTEMS LLC (Continued) **S113150841**

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	N2 Imaging Systems LLC 14440 Myford Rd. Irvine, CA 92606 FA0051250 Onsite to conduct a routine hazardous material business emergency plan HMBEP inspection. Consent to inspect and take photos if necessary was granted by Patrick Joyce, EH&S. No photos were taken on this date. The following disclosable materials were observed: Nitrogen cylinders: 8 x 304 cu. ft. Oxygen cylinder: 304 cu. ft. 17 CNC machines with water soluble cutting coolant: aggregate reservoir volume unknown Orange County Environmental Health, as the Certified Unified Program Agency (OC CUPA), is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. [Truncated]
Eval Division:	Orange County Environmental Health
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	09-18-2019
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Based on the site visit and the corrections made during the site visit in the California Environmental Reporting System (CERS), the previous violations have been corrected. The site is in compliance.

N2 IMAGING SYSTEMS LLC (Continued) **S113150841**

Eval Notes:	On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses. However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Eval General Type:	Other/Unknown
Eval Date:	03-05-2019
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Based on a review of the California Environmental Reporting System (CERS) Website, this business has failed to complete the submittal for 2018 and 2019. Annual certification of CERS information is due between January 1 and March 1 each year. Please resubmit on CERS: G Every year between January 1 and March 1, AND G Within 30 days of change of ownerships, changes in chemical quantities of over 100%, or any new chemicals above the reporting threshold. G Hazardous materials must be reported if the business handles an amount equal to or greater than 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of compressed gas (1,000 cubic feet threshold for medical gases or gases for which the only health/physical hazards are simple asphyxiation and the release of pressure). As a result, violations have been cited against the facility. If you would like assistance, please email myself at this address and arrange an appointment. Continued failure to submit will [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA Waste Code: 181 - Other inorganic solid waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.39000

Year: 2019
Gepaid: CAR000208785
TSD EPA ID: NMD002208627
CA Waste Code: 141 - Off-specification, aged or surplus inorganics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.05100

Year: 2019
Gepaid: CAR000208785
TSD EPA ID: NMD002208627
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.06450

Year: 2019
Gepaid: CAR000208785
TSD EPA ID: NMD002208627
CA Waste Code: 791 - Liquids with pH <= 2
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.06850

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	03-18-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for an aboveground petroleum storage tank inspection. Verified this site has between 1,320 and 10,000 gallons of petroleum on site. Verified the SPCC is complete with self-certification. Annual employee training is current. Tanks are being inspected on a regular basis and records maintained.

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a routine inspection of the aboveground petroleum tanks. John Nguyen was present for the inspection. This site has two 2600 gallon belly tanks as part of the back-up generators. Observed both tanks/generators today. The SPCC plan is on site. Verified self-certification of the plan dated 5/8/14. Monthly inspection logs of the tanks are current and available for review today. Annual online SPCC training records for the generator maintenance staff dated July 2014 are available for review.

Eval Notes: Reviewed and decline HMBEP submittal. The following corrections are needed: CHEMICAL INVENTORY Lead Acid Batteries G at 15% sulfuric acid, your battery electrolyte exceeds the threshold planning quantity of 1000 pounds for sulfuric acid, making this material and EHS. You will need to convert all amounts to pounds and check the EHS box under the Chemical Hazard Classification section. Chlorodifluoromethane G physical state and units must match G if the physical state is a gas, report all amounts in cubic feet. Diesel fuel G it is advised that you combine all diesel fuel into one submittal as this AgencyG s fee structure is based upon the number of chemicals disclosed. By reporting the diesel fuel in two separate disclosures, you have moved your facility into the next highest fee category. SITE MAP Please add the location of the following to your map: all building entrances and exits, shut-offs for gas, water and electrical.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes:	Inspector Comments: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit the following HMD/BEP forms within the next 30 days: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business [Truncated]

Eval Type:	Other, not routine, done by local agency
Eval Notes:	Your HMBEP has been declined, please revise and resubmit within 30 days. For all the chemicals in your inventory, for your average daily amount, it should reflect how much you have on site during an average day. For your maximum daily amount it is the maximum amount of the chemical that you can have on site. So your maximum daily amount should be at least as much as your largest container. For your chemicals G ArgonG and G NitrogenG please completely remove this chemical from your HMBEP because for these inert gases disclosure threshold is 1000 cubic feet and your gases fall under this. Revise site map into a file type that can be viewed. The .img format is not viewable. Try scanning into a .pdf format. If you have any questions please contact me at anesbit@ochca.com or 714-640-4249. Thank you

Eval Type:	Other, not routine, done by local agency
Eval Notes:	Reviewed hazmat disclosure submittal in ESubmit. Declined. One of your Chemical Information pages states xylene waste with a CAS# 67-56-1. Remove this CAS number from this section. Revise the Chemical Identification page for Xylenes Dispersion Mixture: It appears that this disclosure is a material, not a waste. Therefore, remove the Annual Waste Amount volume and State Waste Code. Add the mixture list of chemicals with CAS numbers and percentages. Revise site map into a file type that can be viewed. The .img format is not viewable. Try scanning into a .pdf format.

Waste Description:	CHLOROFORM
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	P001
Waste Description:	2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Waste Code:	P002
Waste Description:	1-ACETYL-2-THIOUREA (OR) ACETAMIDE, N-(AMINOTHIOXOMETHYL)-

SPECIALTY SILICONE FABRICATORS (Continued) **1007198820**

Waste Code: P003
Waste Description: 2-PROPENAL (OR) ACROLEIN

Waste Code: P004
Waste Description: 1,4,5,8-DIMETHANONAPHTHALENE, 1,2,3,4,10,10-HEXA-CHLORO-1,4,4A,5,8,8A,-HEXAHYDRO-, (1ALPHA, 4ALPHA, 4ABETA, 5ALPHA, 8ALPHA, 8ABETA)- (OR) ALDRIN

Waste Code: P005
Waste Description: 2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Waste Code: P006
Waste Description: ALUMINUM PHOSPHIDE (R,T)

Waste Code: P007
Waste Description: 3(2H)-ISOXAZOLONE, 5-(AMINOMETHYL)- (OR) 5-(AMINOMETHYL)-3-ISOXAZOLOL

Waste Code: P008
Waste Description: 4-AMINOPYRIDINE (OR) 4-PYRIDINAMINE

Waste Code: P009
Waste Description: AMMONIUM PICRATE (R) (OR) PHENOL, 2,4,6-TRINITRO-, AMMONIUM SALT (R)

Waste Code: P010
Waste Description: ARSENIC ACID H3ASO4

Waste Code: P011
Waste Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Waste Code: P012
Waste Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Summary:
Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

BRAXTON MFG (Continued) **1012210487**

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Eval Notes: Reviewed and declined HMBEP submittal. The following corrections are still needed: CHEMICAL INVENTORY Braxton Blend 4A, TFT-15 and A-407-E G you have indicated that there are no hazardous ingredients which would make this a non-hazardous material which would not require reporting. If the NFPA label has a 1 or higher number in any category, these are a hazardous material and must be reported. You have listed a Fire Code Hazard Class of either flammable or corrosive for these materials which does indicate that these are hazardous materials (and was also noted during your inspection as being a reportable hazardous material). Please contact the manufacturer to obtain a hazardous ingredients list. Deolube 120-aw G either identify the Proprietary ingredients by contacting the manufacturer or you may remove if this component is not hazardous. Propane G change Physical State to Liquid Oxygen G Storage Temperature should be Ambient unless the cylinder is heated.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 561847
Site Name: Aston Martin Newport Beach (Tustin Shop)
Violation Date: 08-11-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 08/12/2020. The Hazardous Materials Business Emergency Plan (HMBEP) has not been submitted on the CERS portal. Complete the HMBEP on CERS at https://cers.calepa.ca.gov and keep a copy on site.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 07-11-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Read/review pre 2015 HMBEP submission. Accepted pending review of the more recent submission.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-11-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous materials inspection. An inspection of the facility was completed with Kyle Tong. Observed the hazardous materials storage areas. The following reportable hazardous materials were observed today: - Motor oil - Waste oil - Waste antifreeze Reviewed and verified site map item locations.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 08-12-2020
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The Business Emergency Plan has been completed on the CERS portal. Violation I292 abated. No outstanding violations.
Eval Division: Orange County Environmental Health

Eval Date: 07-27-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: hmbep conditionally accepted This submittal is being conditionally approved in order to facilitate transfer of data to California Electronic Reporting System (CERS) database. The facility will need to make the following revisions in CERS following notification of data transfer: Emergency Plan: Please elaborate on your emergency plan and employee training program. This is a crucial component to your submission for emergency first responders and the fire department. Employees should be trained annually and documentation should be kept for 3 years. Facility map: Please resubmit a PDF version of your 2 maps as we are unable to open these files. For further assistance please contact Justin Bechara at jbechara@ochca.com Thank you.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-25-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a routine inspection. Observed the following hazardous materials that meet threshold reporting limits: - 3350 cubic feet HFC-227ea compressed gas (Reporting threshold is 1,000 cubic feet) - Lead acid batteries for back-up power (Undetermined amount. Reporting threshold is 55 gallons electrolyte) - 5,000 gallon diesel back-up generator belly tank (Reporting threshold is 55 gallons) - Ethylene glycol for back-up generator cooling system (Undetermined amount. Reporting threshold is 55 gallons) The Business Emergency Plan is available for review. Employee training records are current and available for review.
Eval Division:	Orange County Environmental Health
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	10-15-2016
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	duplicate FAs in EC: review & accept 2/10/16 HM / APSA submittal // 6 HM reported = ethylene glycol (160 g), Chlorodifluoromethane (397 lb), Diesel fuel (5000 g), Lead acid batteries (1800 g), HFC-227 (3757 lb) & HFC 236 (75 lb)

Eval Division:	Orange County Environmental Health
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-01-2016
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Onsite to conduct a routine hazardous material business emergency plan HMBEP inspection. Consent to enter and take photos if necessary was granted by the Sr. Technician, Jeff Hollenbeck. No photos were taken on this date. The following materials were observed: Chlorodifluoromethane A/C refrigerant (not directly observed) Lead acid batteries 24 cells x 5 = approx. 1800 gallons of electrolyte HFC-227ea fire suppression gas 10 cylinders = approx. 3757 cu. ft. Diesel fuel 5000 gallons Ethylene glycol in back-up generator (not directly observed) 160 gallons HFC-236 A/C refrigerant (not directly observed) = approx. 75 pounds The CERS 10165159 submittal dated 6/22/15 was reviewed onsite during this inspection. A copy of this inspection will be sent to Jeffrey.Hollenbeck@vzw.com

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-11-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a monitor certification and routine inspection. This site has 2 double walled fuel tanks with double wall pressurized piping, 2 dispensers, 1 double walled used oil tank, and 1 double walled new oil tank with suction piping. All turbine sump sensors, fill sump sensors, annular sensors, and UDC sensors alarm on the Veeder Root. Verified turbine shut down, sensor-out, and fail-safe. Mechanical line leak detectors were tested and passed. Spill buckets were visually tested and passed. The fuel tanks use flapper valves for overfill prevention. The technician on site is Martin Schwartz from Orange County Tank Testing. All technician certifications are current including ICC and Veeder Root. Financial responsibility dated 10/1/19. Secondary containment testing dated 10/27/17.

Eval Notes:	On site for a monitor certification and routine inspection. This site has 2 double walled fuel tanks with double wall pressurized piping and 2 dispensers. This site also has 1 double walled used oil tank and 1 double walled new oil tank with suction piping. All turbine sump sensors, fill sump sensors, annular sensors, and UDC sensors alarm on the Veeder Root. Verified turbine shut down, sensor-out, and fail-safe on the fuel tanks. Mechanical line leak detectors were tested and passed. Spill buckets were tested during the secondary containment testing completed today. The fuel tanks use flapper valves for overfill prevention. All technician certifications are current.

Name: SCHICK MOVING STORAGE CO
Address: 2721 MICHELLE DR
City,State,Zip: TUSTIN, CA 92780
Site ID: 542013
CERS ID: 255890
CERS Description: Industrial Facility Storm Water

Violations:
Site ID: 542013
Site Name: Schick Moving Storage Co
Violation Date: 03-08-2012
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: Failure to maintain structural treatment control; trash screen to sump is mostly occluded.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-30-2000
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The SWPPP needs to be updated. I will send an example of SWPPP to David on July 3, 2000. He will mail updates to us by July 14, 2000. Facility is clean over all. Question about oil storage used for cars. No secondary containment but, no real signs of spills.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-08-2012
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: sunny and warm. SWPPP last revised 6/30/2003. Site plan needs to be updated to show relocated 55-gal drum and is missing drainage arrows. Found drain lines from compressor shed; discussed ensuring that blowdown is collected and disposed of. Spill kit found at fuel island. Has a sump pump/well in below-ground level loading dock fitted with a screen; the screen is in need of cleaning. Has an undocumented pipe outlet at NEC of building leaking clear water to ground.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D004
Waste Description:	ARSENIC
Waste Code:	D005
Waste Description:	BARIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D022
Waste Description:	CHLOROFORM

SHIPLEY COMPANY, LLC (Continued) **1000333198**

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

SHIPLEY COMPANY, LLC (Continued) **1000333198**

Waste Code: U008
Waste Description: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U404
Waste Description: U404

Waste Code:	D005
Waste Description:	BARIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD

SHIPLEY COMPANY, LLC (Continued) **1000333198**

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

SHIPLEY COMPANY, LLC (Continued) **1000333198**

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: U008
Waste Description: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U404
Waste Description: U404

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes:	Review of UST submittal on CERS Portal, DECLINED. Spoke with Chris Mamoulelis and discussed changes needed for compliance. The following language was added to the submittal status: 6/4/2015: 1)CFR form needs signatures and dates. Mechanism type needs to be changed from Guarantee to CFO Letter. 2)Monitoring Plan form needs to include UST Monitoring Plan Training and Designated Operator Training. 3)Designated Operator Statement is expired. Update form to include valid expiration date for DO. 4)Site Plot Plan needs to include location of current monitoring panel, location of tank sensors, location of piping. Make the necessary corrections and re-submit for review. Contact Jeff Nofal with questions at 714-640-4512.

Eval Notes: On site for a routine inspection and monitor certification. This site has 1 double walled unleaded tank with double walled suction piping and 1 dispenser. The fill sump sensor (#208), piping sump sensor (#208), annular sensor (#420), and UDC sensor (#208) were tested for alarms and dispenser shut down. The Veeder Root monitor was tested for sensor-out and fail-safe. The overfill alarm was tested and passed. The spill bucket will be tested during the secondary containment testing today. The technician was Philip Smith from Petrotech Service. Verified Veeder-Root and ICC certifications are current. Secondary containment last tested on 8/24/15. No priority alarms have occurred since the last monitor certification and inspection.

Eval Notes:	Steve Brunworth, Shop Foremen, consented to/assisted with this haz waste compliance inspection. This automotive dealership site generates haz waste associated with automobile service/repair activities. Using a compliance checklist, I reviewed required haz waste record keeping and surveyed haz waste management: - haz waste containers appeared compatible with contents and in good condition; - haz waste containers appeared either empty of contents or were actively accumulating waste; - haz waste emergency G co-ordinatorG name/phone # posted for employee use; - containers of haz waste marked with required information and closed to prevent spillage; - haz waste hauled within allowable waste accumulation time limits; - no uncontained haz waste or floor waste accumulations observed. Note that the haz waste management correction items above also refer to a container used to accumulate spent gas/oil filters that do not qualify for the "drained used oil filter" [Truncated]

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

14351 MYFORD ROAD
14351 MYFORD ROAD
TUSTIN, CA 92780

TARGET PROPERTY COORDINATES

Latitude (North):	33.717318 - 33° 43' 2.34''
Longitude (West):	117.803324 - 117° 48' 11.97''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	425567.3
UTM Y (Meters):	3730909.5
Elevation:	69 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640942 TUSTIN, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

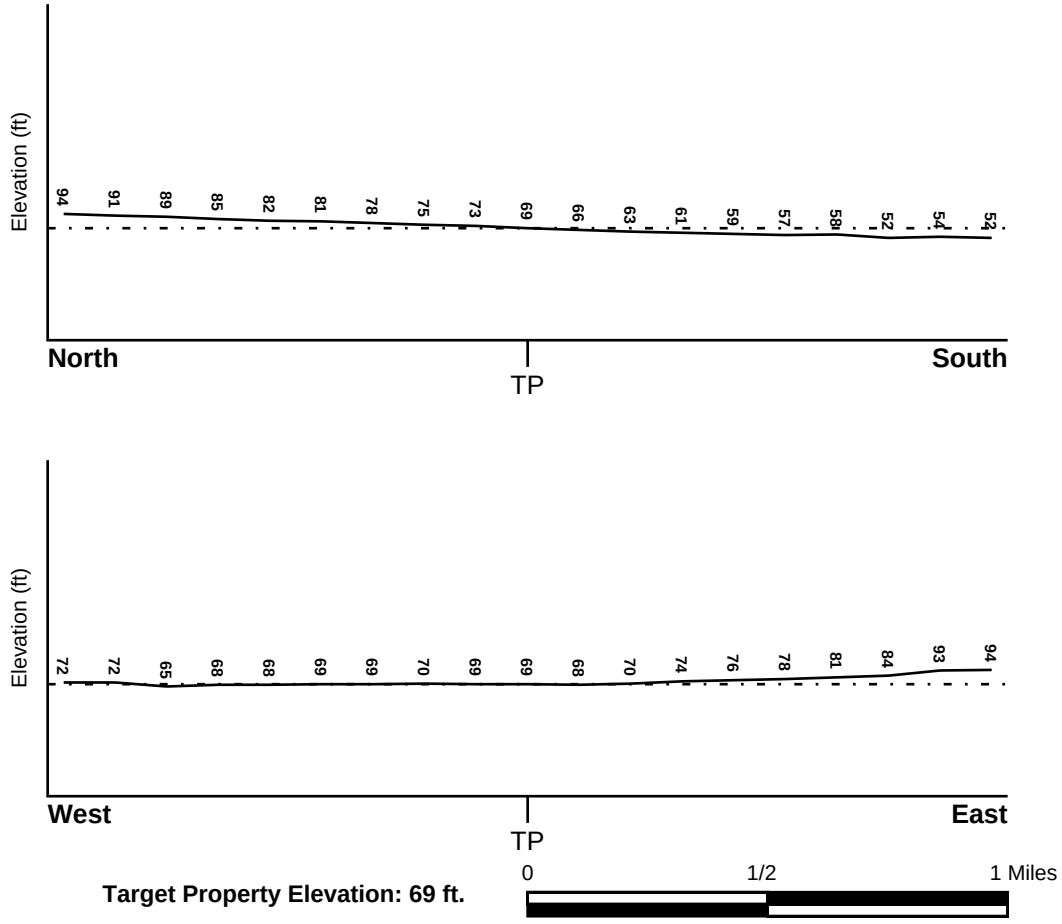

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 69 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0283J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06059C0277J	FEMA FIRM Flood data

06059C0279J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
TUSTIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A3	1/8 - 1/4 Mile SW	W
6	1/8 - 1/4 Mile ESE	SE

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
4G	1/8 - 1/4 Mile ESE	SE
5G	1/8 - 1/4 Mile SW	W

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

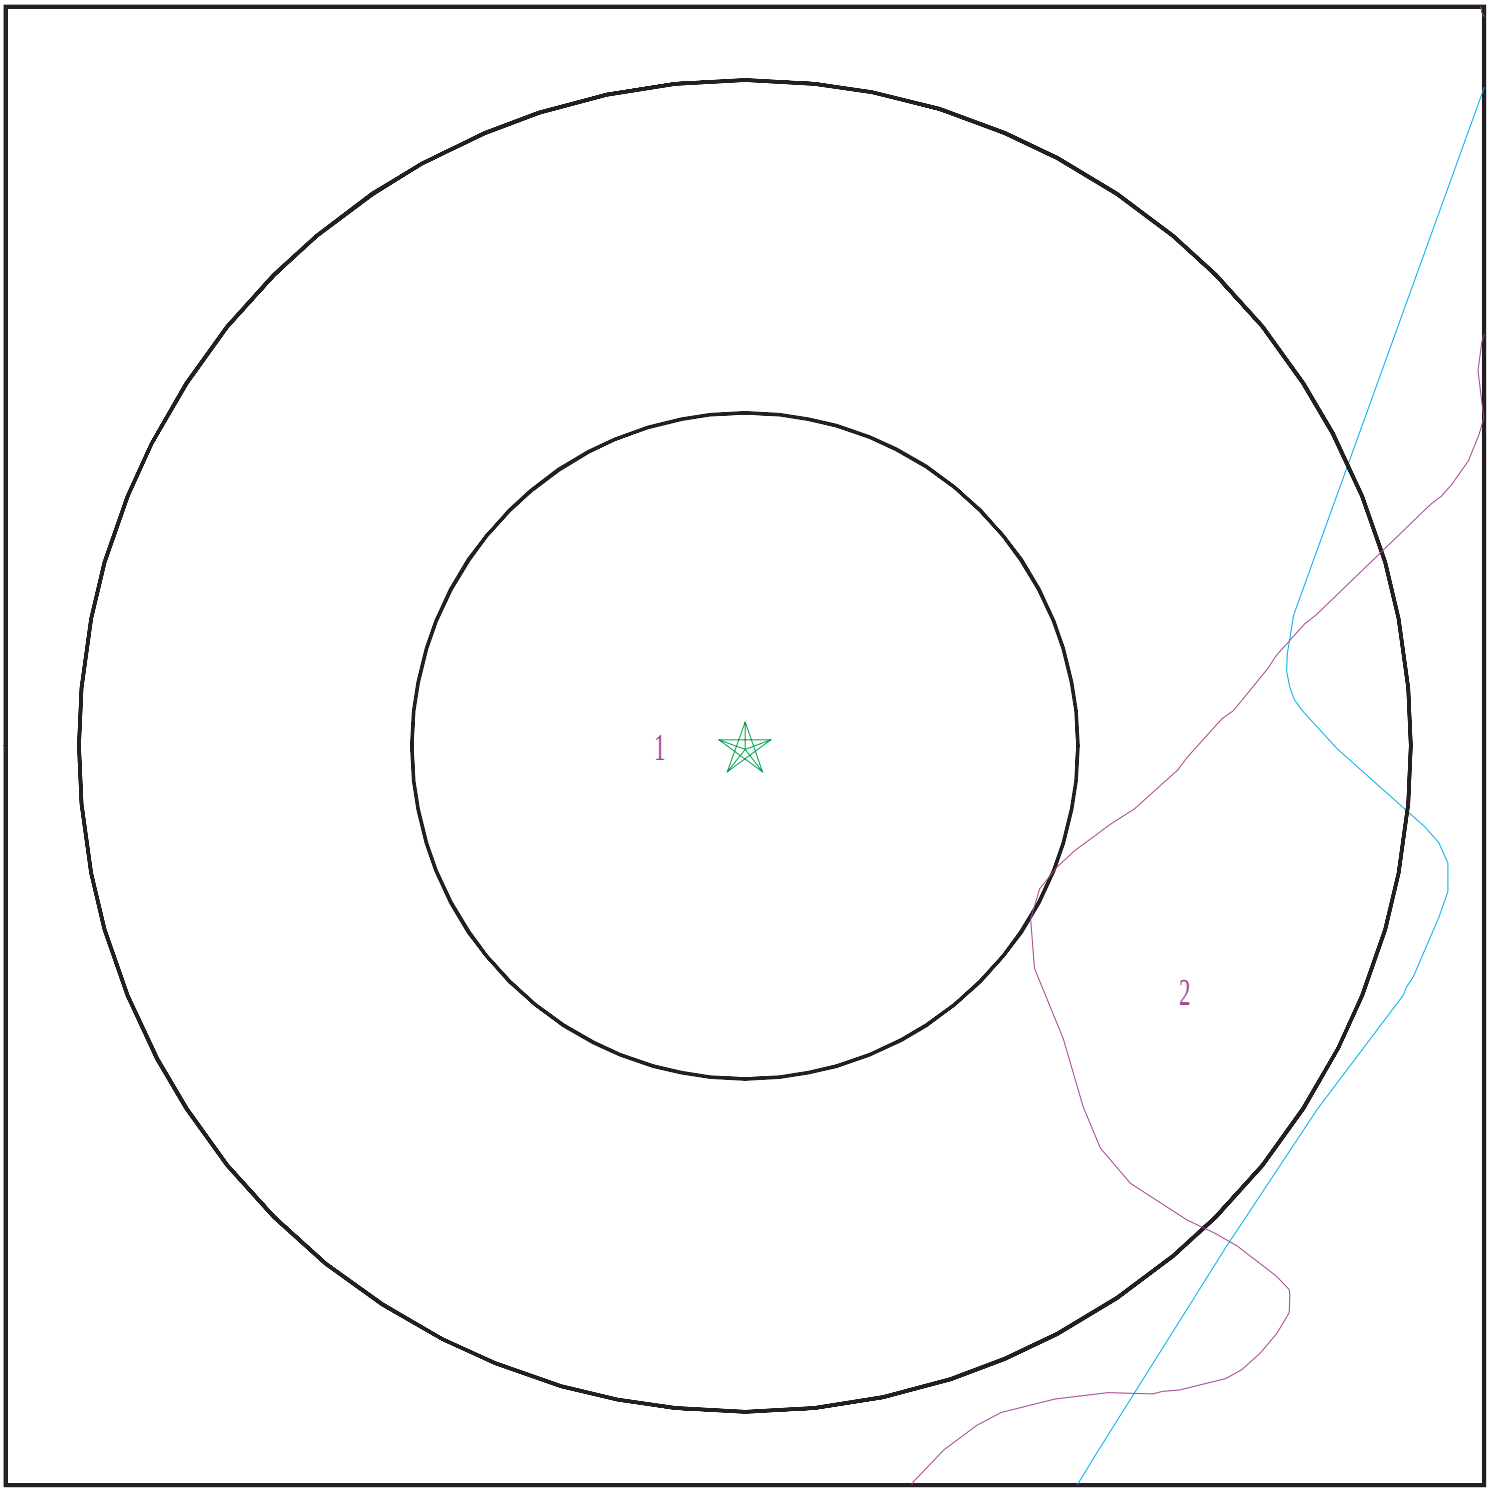

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHINO

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	24 inches	59 inches	sandy clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: OMNI

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	11 inches	59 inches	silty clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Soil Vapor Sampling and Analysis
Myford II Property
14321 & 14351 Myford Road
Tustin, California 92780

Dear Mr. LeBlanc:

This report documents the collection and analysis of soil vapor samples at the commercial/light industrial properties at 14321 and 14351 Myford Road, aka "Myford II," (the site) in Tustin, California. Avocet Environmental, Inc. (Avocet) conducted the sampling on behalf of B8 Myford II Industrial Owner LLC, which may acquire the site, demolish the existing buildings, and redevelop the cleared land with a new warehouse/distribution facility. The site location is shown in Figure 1 and an aerial photograph of the site, showing the soil vapor and a related ambient air sample locations, is presented in Figure 2.

OVERVIEW

Regulatory agencies in California have recently taken a very conservative approach to solvents, particularly chlorinated volatile organic compounds (VOCs), in soil vapor and the potential for them to intrude into and accumulate in overlying structures. In that context, Wespercorp, which occupied the building at 14321 Myford Road in the 1980s, is known to have operated two vapor spray degreasers in its manufacturing operations, and the building at 14351 Myford Road was occupied by Silicon Systems, Inc. (SSi) from the early 1980s through 1996. SSi built out part of the building at 14351 Myford Road as a wafer fabrication facility, and its manufacturing operations involved the use of certain nonchlorinated cleaning and degreasing solvents.

To assess whether residual VOCs may be present in soil vapor beneath the site, Avocet installed and sampled six soil vapor probes, three on each of the properties at 14321 and 14351 Myford Road. As groundwater beneath the site is shallow, on the order of 12 feet below ground surface (bgs), Avocet installed a single (as opposed to nested) vapor probe at each of the six locations, at approximately 5 feet bgs. Avocet collected samples from each of the vapor probes and analyzed them for VOCs, including fuel oxygenates, using U.S. Environmental Protection Agency (EPA) Method TO-15.

FIELD AND LABORATORY PROCEDURES

This section documents field, laboratory, and related procedures followed during the subject soil vapor survey, which was conducted in January 2022.

Hand Auger Drilling and Vapor Probe Installation

On January 28, 2022, Borings SV-1 through SV-6 were advanced using a 3.25-inch-diameter hand auger to a depth of 5.5 feet bgs at the locations shown in Figure 2. The hand augering equipment was cleaned prior to first use and between borings by scrubbing in a nonphosphate detergent solution followed by potable and distilled water rinses. Prior to hand augering, the exterior pavement was wet cored by Strongarm Environmental Field Services, Inc. using a 4-inch-diameter concrete core barrel. During hand augering, soil matrix samples collected at nominal depths of 1, 2.5, and 5 feet bgs were examined for indications of contamination and screened for the possible presence of organic vapors using a calibrated photoionization detector (PID). For screening purposes, soil was sealed in a freezer bag and agitated to promote the volatilization of organic compounds, if any, present in the soil matrix. After allowing organic vapors, if any, to equilibrate, the probe of the PID was inserted into the bag headspace and the peak PID reading was recorded. In brief, no elevated PID readings were recorded in any of the six borings, nor were there any visual or olfactory indications of soil contamination.

Soil vapor probes were installed in Borings SV-1 through SV-6 in accordance with the July 2015 "Advisory - Active Soil Vapor Investigations" prepared by the California Department of Toxic Substances Control (DTSC) and the Los Angeles and San Francisco Bay Regional Water Quality Control Boards (DTSC, et al., July 2015). The probes consist of a stainless steel porous tip connected to ⅛-inch outside diameter Nylaflow® tubing extending approximately 2 feet above the ground surface. The Nylaflow® tubing was measured and cut to length and a polyvinyl chloride pipe was used as a guide to ensure the probe tips were installed at the correct depth. The stainless steel probe tips were installed at the midpoint of an approximately 12-inch layer of silica sand. After placing the sandpack around the probe, the annulus above was backfilled with 12 inches of dry granular bentonite. Additional dry bentonite was added in 6- to 12-inch lifts to approximately 6 inches below grade, with each lift hydrated in place with potable water. The wellheads are protected inside 3.5-inch-diameter vaults set in concrete and finished flush with the surrounding asphalt/concrete surfaces. The Nylaflow® tubes are fitted with gas-tight valves to prevent probe degassing after construction and during equilibration. The Nylaflow® tubing is coiled up inside the wellhead vaults.

Vapor Probe Sampling

In accordance with current regulatory agency guidance (DTSC, et al., July 2015), probes installed in hand-augered borings must be allowed a minimum of 48 hours to equilibrate prior to being purged and sampled. On January 31, 2022, after the minimum equilibration period had elapsed, Avocet purged and sampled the six soil vapor probes. More specifically, Avocet used a sampling pump to purge the probes of three "sample train volumes" at a rate of 200 milliliters per minute in accordance with current regulatory agency guidance (DTSC, et al., July 2015). Soil vapor samples were then collected from each of the depth-discrete probes in 1-liter SUMMA canisters. On

completion of sampling, the SUMMA canisters were hand delivered to the Eurofins Calscience, LLC (Eurofins) laboratory in Garden Grove, where they were analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15.

Quality assurance/quality control measures associated with soil vapor sampling and analysis included the following:

- Collection of an ambient air sample while soil vapor sampling was in progress. The ambient air sample was collected in the parking lot between the two buildings using the same type of flow regulator used to collect the soil vapor samples. As with the soil vapor samples, the ambient air sample was analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15.

- A shut-in test was conducted on each vapor probe to check for leaks in the aboveground sample train. For the shut-in test, the aboveground sample train was evacuated, using a syringe, to at least 100 inches of water with the block valves on the attached sample canister and at the probe head closed. If a noticeable loss of vacuum had been observed, the sample train would have been reassembled and the test repeated; however, no significant loss of vacuum was observed in any of the probes.

- The use of 1,1-difluoroethane (1,1-DFA) as a leak detection compound to verify the integrity of the sample train during sample collection. In brief, 1,1-DFA was applied to paper towels wrapped around the probe and the sample train during the sampling process, and 1,1-DFA was included in the analytical suite as an indicator of the integrity of the probe and the sample train. 1,1-DFA was not detected in any of the soil vapor samples or in the ambient air sample, indicating the probes were not leaking or "short-circuiting" to the atmosphere while the soil vapor samples were being collected.

Information recorded as part of the sample collection process included the volume of air purged prior to sampling, sample collection start and end times, and the initial and final vacuums in the SUMMA canisters. The soil vapor samples were submitted under chain of custody to the Eurofins laboratory in Garden Grove, where they were analyzed for VOCs using EPA Method TO-15. The results of the soil vapor sample analyses are summarized in Table 1 and are discussed below. The soil vapor sample results are presented in full in the Eurofins laboratory report in Attachment 1.

FINDINGS

This section summarizes the findings of the soil vapor assessment in terms of lithology and the occurrence and distribution of VOCs in soil vapor beneath the site.

Lithologic Conditions

Beneath the exterior pavement, Avocet observed a mixture of moist, medium stiff to stiff silts and clays. This material is probably native material that was reworked during redevelopment grading.

In Boring SV-6, dry, loose sand was present to approximately 2 feet bgs, below which native or reworked native soil was encountered to 5.5 feet bgs, the total depth of the boring.

Soil Vapor Sample Results

Soil vapor samples from the six 5-foot probes were analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15. The results of the analyses are summarized in Table 1, presented graphically in Figure 2, and are included in full in the Eurofins laboratory report in Attachment 1. In brief, the six soil vapor samples contained detectable concentrations of one or more of 17 VOCs, as follows:

VOCs in Soil Vapor and Ambient Air Samples, January 31, 2022
(Units are micrograms per cubic meter or µg/m^3)

Compound	Detection Frequency	Concentration Range	Ambient Air
Acetone	6/6	32 – 160	27
Benzene	5/6	3.3 – 12	ND<1.6
2-Butanone (MEK)	5/6	8.8 – 47	ND<4.4
Dichlorodifluoromethane	2/6	2.7 – 4.2	ND<2.5
1,1-Dichloroethylene	1/6	3.4	ND<2.0
Ethanol	6/6	25 – 71	22
Ethylbenzene	4/6	3.0 – 3.5	ND<2.2
Isopropanol (IPA)	6/6	17 – 240	18
4-Methyl-2-pentanone (MIBK)	5/6	9.2 – 31	ND<6.1
Tetrachloroethylene (PCE)	4/6	11 – 110	ND<3.4
Toluene	6/6	16 – 150	3.3
1,1,1-Trichloroethane (1,1,1-TCA)	1/6	75	ND<2.7
Trichloroethylene (TCE)	2/6	6.9 – 230	84
Trichlorofluoromethane	3/6	7.5 – 100	ND<5.6
Freon 113	2/6	20 – 51	ND<11
o-Xylene	5/6	2.7 – 4.7	ND<2.2
p,m-Xylenes	3/6	9.5 – 14	ND<8.7

Note: Freon 113 = 1,1,2-Trichloro-1,2,2-trifluoroethane

Because of the extremely low Reporting Limits achievable using EPA Method TO-15, it is not uncommon to detect this many or more VOCs in soil vapor and indeed in ambient air, and acetone and isopropyl alcohol are common laboratory artifacts and were also detected in the ambient air sample collected in conjunction with the soil vapor samples. Avocet also notes that the 84 µg/m^3 of trichloroethylene (TCE) reported in the ambient air sample is anomalously high; however, Eurofins double-checked its analytical data and did not report any errors.

To assess the potential significance, if any, of the VOCs in soil vapor on commercial workers in the planned buildings at the site, Avocet applied "default" attenuation factors to the highest concentration of each VOC in soil vapor, regardless of location or how often it was detected, and compared the resulting hypothetical indoor air VOC concentrations to San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs)

(SFBRWQCB, July 2019), DTSC-modified Screening Levels (DTSC-SLs; DTSC, June 2020), and EPA Regional Screening Levels (RSLs; EPA, November 2021). Certain California regulatory agencies have adopted the very conservative EPA default attenuation factor (AF) of 0.03 (EPA, June 2015), which Avocet understands is based, in large part, on studies of vapor intrusion into residences with basements in a few areas of the country. Other California regulatory agencies continue to use the DTSC default AFs of 0.001 and 0.0005 for existing and new commercial buildings, respectively (DTSC, October 2011). Using default AFs of 0.03, 0.001, and 0.0005, the hypothetical VOC concentrations in indoor air are as follows:

Preliminary Soil Vapor Intrusion Assessment (units are micrograms per cubic meter or µg/m^3)							
Compound	**Max. Soil Vapor Conc.**	**Hypothetical Indoor Air Conc.** (Attenuation Factor)			**Commercial/Industrial Screening Levels**		
		DTSC (0.0005)	**DTSC** (0.001)	**EPA** (0.03)	**SFBRWQCB ESLs**	**DTSC-SLs**	**EPA RSLs**
Acetone	1.6E+02	8.00E-02	1.60E-01	4.80E+00	1.4E+05	- -	- -
Benzene	1.2E+01	6.00E-03	1.20E-02	3.60E-01	4.2E-01	4.2E-01	1.6E+00
2-Butanone (MEK)	4.7E+01	2.35E-02	4.70E-02	1.41E+00	2.2E+04	- -	2.2E+04
Dichlorodifluoromethane	4.2E+00	2.10E-03	4.20E-03	1.26E-01	- -	- -	4.4E+02
1,1-Dichloroethylene	3.4E+00	1.70E-03	3.40E-03	1.02E-01	3.1E+02	3.1E+02	8.8E+02
Ethanol	7.1E+01	3.55E-02	7.10E-02	2.13E+00	- -	- -	- -
Ethylbenzene	3.5E+00	1.75E-03	3.50E-03	1.05E-01	4.9E+00	- -	4.9E+00
Isopropanol (IPA)	2.4E+02	1.20E-01	2.40E-01	7.20E+00	- -	- -	8.8E+02
4-Methyl-2-pentanone	3.1E+01	1.55E-02	3.10E-02	9.30E-01	1.3E+04	- -	1.3E+04
Tetrachloroethylene (PCE)	1.1E+02	5.50E-02	1.10E-01	3.30E+00	2.0E+00	2.0E+00	4.7E+01
Toluene	1.5E+02	7.50E-02	1.50E-01	4.50E+00	1.3E+03	1.3E+03	2.2E+04
1,1,1-Trichloroethane	7.5E+01	3.75E-02	7.50E-02	2.25E+00	4.4E+03	4.4E+03	2.2E+04
Trichloroethylene (TCE)	2.3E+02	1.15E-01	2.30E-01	6.90E+00	3.0E+00	- -	3.0E+00
Trichlorofluoromethane	1.0E+02	5.00E-02	1.00E-01	3.00E+00	- -	5.3E+03	- -
Freon 113	5.1E+01	2.55E-02	5.10E-02	1.53E+00	- -	- -	2.2E+04
p/m-Xylene	1.4E+01	7.00E-03	1.40E-02	4.20E-01	4.4E+02	- -	4.4E+02
o-Xylene	4.7E+00	2.35E-03	4.70E-03	1.41E-01	4.4E+02	- -	4.4E+02

Notes: Orange shading indicates highlighted indoor air concentration exceeds one or more of the highlighted screening levels.

Using the DTSC AFs of 0.0005 and 0.001 for future and existing buildings, respectively, the hypothetical VOC concentrations in indoor air are all lower, often by several orders of magnitude, than the corresponding commercial/industrial screening levels. Using the very conservative EPA AF of 0.03, the hypothetical concentrations of tetrachloroethylene (PCE) and TCE in indoor air marginally exceed commercial/industrial screening levels. That said, and as noted above, the EPA AF of 0.03 is based, in large part, on studies of vapor intrusion into residences with basements in a few areas of the country, and studies by DTSC suggest it is overly conservative and not applicable to typical slab-on-grade buildings in California. Moreover, as shown in Figure 2, only one of the six reported PCE concentrations in soil vapor results in a hypothetical indoor air concentration above the commercial/industrial screening level, and the same is true for TCE, albeit in a different probe. Given the site's history, the detected VOCs in soil vapor probably represent the highly

dispersed residuals of *de minimis* liquid and/or vapor-phase releases in the 1980s and into the 1990s.

Given the isolated occurrences of elevated PCE and TCE concentrations in soil vapor, the elevated TCE concentration in ambient air, the conservatism of EPA's 0.03 AF, and the only marginal exceedances of conservative indoor air screening levels, it is Avocet's opinion that the soil vapor data do not warrant vapor intrusion mitigation measures.

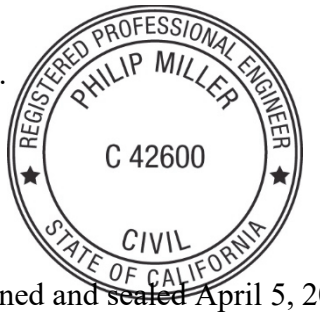

CLOSING

Avocet Environmental, Inc. appreciates the opportunity to be of service to B8 Myford II Industrial Owner LLC. If you have any questions about this report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 102 or at pmiller@avocetenv.com.

Respectfully submitted,

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Avocet Environmental Inc
Project/Site: Myford II Properties (1713.003)

Job ID: 570-83094-1

Job ID: 570-83094-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-83094-1

Comments
No additional comments.

Receipt
The samples were received on 1/31/2022 11:03 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Avocet Environmental Inc
Project/Site: Myford II Properties (1713.003)

Job ID: 570-83094-1

Client Sample ID: SV-1 — Lab Sample ID: 570-83094-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
2-Butanone	8.8		4.7		ug/m3	1.073		TO-15	Total/NA
4-Methyl-2-pentanone	14		6.6		ug/m3	1.073		TO-15	Total/NA
Acetone	76		5.1		ug/m3	1.073		TO-15	Total/NA
Benzene	3.6		1.7		ug/m3	1.073		TO-15	Total/NA
Ethylbenzene	3.0		2.3		ug/m3	1.073		TO-15	Total/NA
Isopropanol	240		13		ug/m3	1.073		TO-15	Total/NA
o-Xylene	4.5		2.3		ug/m3	1.073		TO-15	Total/NA
m,p-Xylene	14		9.3		ug/m3	1.073		TO-15	Total/NA
Tetrachloroethene	35		3.6		ug/m3	1.073		TO-15	Total/NA
Ethanol	71		10		ug/m3	1.073		TO-15	Total/NA
Toluene	20		2.0		ug/m3	1.073		TO-15	Total/NA

Client Sample ID: SV-2 — Lab Sample ID: 570-83094-2

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
1,1,2-Trichloro-1,2,2-trifluoroethane	51		12		ug/m3	1.059		TO-15	Total/NA
2-Butanone	47		4.7		ug/m3	1.059		TO-15	Total/NA
4-Methyl-2-pentanone	31		6.5		ug/m3	1.059		TO-15	Total/NA

Eurofins|Calscience COC Template

Login Sample Receipt Checklist

Client: Avocet Environmental Inc

Job Number: 570-83094-1

Login Number: 83094
List Number: 1
Creator: Vitente, Precy

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: Avocet Environmental Inc
Project/Site: Myford II Properties (1713.003)

Job No.: 570-83094-1

Lab Sample ID	Canister Volume (L)	Presampling Pressure ("Hg)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initials

Formulae:

Preadjusted Volume (L) = ((Preadjusted Pressure ("Hg) + 29.92 "Hg) * Vol L) / 29.92 "Hg
Adjusted Volume (L) = ((Adjusted Pressure (psig) + 14.7 psig)* Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)
