FINAL INITIAL STUDY / NEGATIVE DECLARATION
MYFORD II PROJECT
May 2023

A. BACKGROUND

Project Title:	Myford II Project
Lead Agency:	City of Tustin, 300 Centennial Way, Tustin, California 92780
Contact Person and phone number:	Leila Carver, Senior Planner Consultant (714) 573-3126 lcarver@tustinca.org
Project Location:	14321 and 14351 Myford Road Tustin, CA 92780
Project Sponsor's Name and Address:	B8 Myford II Industrial Owner LLC 2442 Dupont Drive Irvine, CA 92612
General Plan Land Use Designation:	Planned Community Commercial/Business – PCCB
Zoning Designation:	Planned Community Industrial – PC IND

Project Description: The Project proposes to demolish the two existing industrial/office buildings (totaling approximately 136,098 SF) and redevelop the 7.18-acre site with one warehouse distribution building totaling approximately 148,437 square feet including 143,437 square feet of warehouse space, 5,000 square feet of two-story office space, and associated parking, and landscaping.

Surrounding Land Uses and Setting:	The project site is located in an infill industrial and commercial area and is bounded by commercial and industrial buildings to the north and west, an industrial warehouse building to the south, and Myford Road to the east.

Other public agencies whose approval is required:	Tustin Building Division (Demolition Permits, Grading Permits, Building Permits) Tustin Planning Commission (Tentative Parcel Map (TPM) approval, Design Review (DR) approval, and Mitigated Negative Declaration (MND) approval) Tustin Engineering Division (Encroachment Permits, Storm Drain Connection Approval, Final Parcel Map approval) Fire Protection District (Building Plan check and approval. Review for compliance with 2022 California Fire Code, 2022 California Building Code, California Health & Safety Code and Tustin Municipal Code. Plans for fire detection and alarm systems, and automatic sprinklers) Irvine Ranch Water District (Letter of authorization/consent for proposed improvements to provide water supply connection and sewer connection to new development.) Southern California Edison Company (Letter of authorization/consent for proposed improvements to provide electrical supply connection to new development)

1.0 INTRODUCTION & PURPOSE OF THE INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

1.1 Purpose and Scope of the Initial Study

In accordance with the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] Section 21000 et seq.) and its Guidelines (California Code of Regulations [CCR], Title 14, Section 15000 et seq.), this Initial Study has been prepared to evaluate the potential environmental effects associated with the construction and operation of the Myford II Project (proposed project). Pursuant to Section 15367 of the State CEQA Guidelines, the City of Tustin (City) is the lead agency for the project. The lead agency is the public agency that has the principal responsibility for carrying out or approving a project.

As identified in the State CEQA Guidelines Section 15063, following preliminary review, the lead agency shall conduct an Initial Study to determine if the project may have a significant effect on the environment. The purpose of an initial Study is to:

(1) Provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or a Negative Declaration.

(2) Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a Negative Declaration.

(3) Assist in the preparation of an EIR, if one is required, by:

  (A) Focusing the EIR on the effects determined to be significant,

  (B) Identifying the effects determined not to be significant,

  (C) Explaining the reasons for determining that potentially significant effects would not be significant, and

  (D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.

(4) Facilitate environmental assessment early in the design of a project;

(5) Provide documentation of the factual basis for the finding in a Negative Declaration that a project will not have a significant effect on the environment;

(6) Eliminate unnecessary EIRs;

(7) Determine whether a previously prepared EIR could be used with the project.

As set forth in the State CEQA Guidelines Section 15070, an Initial Study leading to a Mitigated Negative Declaration (IS/MND) can be prepared when the Initial Study has identified potentially significant environmental impacts, but revisions have been made to a project, prior to public

review of the Initial Study, that would avoid or mitigate the impacts to a level considered less than significant; and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment.

1.2 Summary of Findings

Section 3.0 of this document contains the Environmental Checklist that was prepared for the proposed project pursuant to CEQA requirements. The Environmental Checklist indicates that the proposed project would not result in significant impacts with the implementation of mitigation measures, as identified where applicable throughout this document.

1.3 Initial Study Public Review Process

The Initial Study and a Notice of Intent (NOI) to adopt an MND will be distributed to responsible and trustee agencies, other affected agencies, and other parties for a 20-day public review period. Written comments regarding this MND should be addressed to:

Leila Carver
Senior Planner Consultant
City of Tustin
Phone: (714) 573-3126
Email: lcarver@tustinca.org
300 Centennial Way
Tustin, CA 92780

Following receipt and review of comments from agencies, organizations, and/or individuals at the conclusion of the 20 day review period, the City will determine whether the comments need to be considered and addressed. If not, the Project and environmental documentation will be tentatively scheduled by the City for consideration.

1.4 Report Organization

This document has been organized into the following sections:

Section 1.0 – Introduction & Purpose of the Initial Study/Mitigated Negative Declaration. This section provides an introduction and overview describing the conclusions of the Initial Study.

Section 2.0 – Description of Proposed Project. This section identifies the location, setting and key project characteristics, as well as a listing of anticipated discretionary actions.

Section 3.0 – Initial Study Checklist. The Environmental Checklist Form provides an overview of the potential impacts that may or may not result from project implementation.

Section 4.0 – Environmental Analysis. This section contains an analysis of environmental impacts identified in the Environmental Checklist Form including cumulative analysis that addresses potential impacts of the proposed project taken in sum with other past, present, and reasonably foreseeable projects.

Section 5.0 – References. The section identifies resources used to prepare the Initial Study.

2.0 DESCRIPTION OF PROPOSED PROJECT

2.1 Location, Setting, Proposed Project

The Myford II project (proposed project) is located in the City of Tustin (City) south of Interstate 5 (I-5), southeast of State Route 55 (SR 55), and northwest of State Route 261 (SR 261), as depicted in **Figure 1, Regional Location Map**. The overall project site is located on approximately 7.18 acres on the west side of Myford Road between Walnut Avenue and Michelle Drive, as depicted in **Figure 2, Project Vicinity Map**.

PROJECT SETTING

The project site is located at 14321 and 14351 Myford Road in the City of Tustin, California, just west of the city's border with the City of Irvine. The project site is located in an infill industrial and commercial area and is bounded by commercial and industrial buildings to the north and west, an industrial warehouse building to the south, and Myford Road to the east, within the Planned Community Industrial zoning designation (PC IND). The project site consists of two lots fronting onto Myford Road. The southernmost lot (14351 Myford Road) features an approximately 81,008 square foot office building and the northernmost lot (14321 Myford Road) features industrial building with a footprint of approximately 55,090 square feet. Both buildings are surrounded by asphalt pavement used for employee parking with outdoor storage located along the perimeter of the northernmost lot. Parking lot light poles are situated throughout the parking areas on both lots. Monument signage exists at the entrances along Myford Road and wayfinding signage is posted throughout the parking areas. Loading docks are located on the west side of the approximately 55,090 square foot industrial building located at 14321 Myford Road. Perimeter fencing is located along all interior property lines of both lots. On-site vegetation on both lots consists of landscaped ornamental vegetation and mature trees are found primarily within the front setback area adjacent to Myford Road.

A sidewalk is located along Myford Road and overhead utility lines are not visible in the vicinity. The on-site topography is generally flat, and the ground surface is approximately 69 feet above mean sea level, sloping generally from south southwest.

EXISTING GENERAL PLAN LAND USE AND ZONING DESIGNATIONS

The City's General Plan land use designation for the project site is Planned Community Commercial/Business (PCCB). The current zoning for the project site is PC IND.

2.2 Proposed Project

The proposed project is comprised of one warehouse distribution building totaling approximately 148,437 square feet including 143,437 square feet of warehouse space, 5,000 square feet of two-story office space, and associated parking, and landscaping on approximately 7.18 net acres as shown in **Figure 3: Site Plan; Figure 4: Conceptual Elevations; Figure 5: Conceptual Landscape Plan;** and **Table 1: Project Building Summary**, below. The proposed industrial warehouse building would be oriented with the nineteen (19) dock doors located on the western side of the building (opposite Myford Road), with a maximum height of approximately 47'-6". The proposed project would have a Lot Coverage of 46.8%, a Floor Area Ratio (FAR) of 0.475, a minimum 30-foot landscaped front (street side) setback, a minimum 10-foot side setback, all in accordance with the City's applicable development standards. The proposed building will be constructed as a concrete tilt-up, with architecture featuring a modern aesthetic including glazing with varied projections to provide depth and shadowing and points of visual interest for the architecture. An 8-foot high tube steel fence is proposed along the entire western property line and the portion of the northern property line needed to secure the truck court. At both entrances to the secured truck court located on the west side of the proposed building, 8-foot high metal swing gates would be installed. An existing 8-foot tube steel fence would be retained on the southern boundary of the project site. The project proposes to use a Bio Clean Modular Wetlands System for stormwater treatment.

The proposed project would also require discretionary approval from the City for Design Review (DR) 2022-0013, Tentative Parcel Map No. 2022-153 (SUB 2022-0003).

Table 1: Project Building Summary

Building	Site (sf)	Office 1st Floor(sf)	Office 2nd Floor (sf)	Warehouse (sf)	Total Building (sf)	Dock Doors	Landscaping (sf)	Landscaping (% of site)
Total	312,560	2,750	2,250	143,437	148,437	19	37,004	11.8%

ACCESS AND PARKING

Vehicular access provisions for the project site would consist of three full-movement, 27' to 35' wide driveways on Myford Road. Passenger vehicles would have the option to access the project site via any of the three project driveways, while trucks would access the project site at either the southerly or northerly 35' wide driveways. All project driveways would be unsignalized.

Parking for automobiles, including standard, accessible, and electrical vehicle (EV) capable stalls, would be provided in accordance with applicable code requirements. Automobile and trailer parking details, including parking requirements, are provided in **Table 2: Project Parking Summary**, below.

Table 2: Project Parking Summary

Parking Provided								Parking Required
Standard Auto Parking	**Van Accessible Parking**	**Standard Accessible Parking**	**EV Capable Van Accessible**	**EV Capable Standard Accessible**	**EV Capable Space**	**EV Capable Space w/ Chargers**	**Total Auto Parking Provided**	**Total Auto Parking Required**
73 stalls	2 stalls	3 stalls	1 stall	1 stall	17 stalls	6 stalls	103 stalls	76 stalls

LANDSCAPING

As shown in Figure 5, proposed landscaping would cover approximately 37,004 square feet of the project site, which equates to approximately 11.8 percent of the site area. Landscaping would be installed in all areas not devoted to buildings, parking, traffic and specific user requirements, in accordance with the Irvine Industrial Complex Planned Community District Regulations, which specify landscape design guidelines. The development standards set forth therein require the entire building setback be landscaped.

CONSTRUCTION AND PHASING

Construction of the proposed project is expected to commence in January 2024 with a construction duration of approximately 11 months (inclusive of approximately 3 months to demolish the existing industrial/office buildings) and would be completed in one phase. Total grading for the proposed project is estimated to require 13,336 cubic yards (cy) of cut and 13,336 cy of fill; earthwork is expected to balance on-site.

During construction, the project site would be fully fenced with one access point/gate from Myford Road. The temporary construction trailer and all construction equipment and worker parking would be staged/located fully onsite (no encroachment into public right-of-way). The temporary construction trailer would initially be installed onsite near the access point/gate off of Myford Road, and would be subsequently relocated to another onsite location during the construction of the planned improvements in the vicinity of the initial location for the temporary construction trailer. The location of the on-site equipment staging and worker parking will vary depending on the scope of construction work being completed. The site's singular access point/gate will be closed and locked each day at close of business for security purposes. In accordance with Section 4617(e) of the City's Municipal Code, project construction activity would be limited to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday and 9:00 a.m. to 5:00 p.m. Saturdays, excluding city observed federal holidays (unless otherwise approved by the City of Tustin).

EXISTING PROJECT SITE

The project site is located on Assessor Parcel Nos. (APNs) 432-473-13 and 432-473-19. The project site is currently improved with two industrial/office buildings (81,008 and 55,090 square feet), surface parking and landscaping. There are existing utilities (water, sewer, electricity, gas) to the project site.

OPERATIONS

The warehouse distribution building is currently planned as a "speculative building." Therefore, the future tenant(s) or buyer(s) of the building are not currently known. Without knowing the future tenant(s) or buyer(s), an exact number of future employees or hours of operation cannot be determined. Therefore, this Initial Study and associated technical reports use approximate potential on-site employees, hours of operation, and vehicular traffic generation based on the project's proposed square footage and use as a warehouse distribution facility. In an abundance of caution, this Initial Study and the associated technical reports have assumed uses and intensities that may be greater than what would be built out or put into operation, resulting in a possible conservative/worst-case estimation of impacts. The Trip Generation and Vehicle Miles Traveled (VMT) Memorandum (**Appendix H**), Air Quality Assessment (**Appendix A**), and Greenhouse Gas Emissions Assessment (**Appendix D**) prepared for the project rely on the latest ITE traffic (trip generation) rates, which are based entirely on the building square footage and proposed use, and do not include a specific number of dock door positions.

REQUIRED PERMITS

The City of Tustin is the Lead Agency under CEQA and is responsible for reviewing and approving this Initial Study. As part of the proposed project's implementation, the City will also consider the following discretionary approvals:

- Design Review (DR)
- Tentative Parcel Map (TPM)

Additional permits will be required for the proposed project which will include but not be limited to: the issuance of a demolition permit, encroachment permits for modified driveways, grading permits, building permits, and permits for new utility connections. These additional permits are considered ministerial, and thus the issuance of these permits would not trigger the need to further comply with CEQA/discretionary permits or approvals. Also, development of the proposed project does not require the issuance of any additional discretionary permits from any other federal, state, or local agencies.

PROJECT DESIGN FEATURES

Project Design Features (PDFs) are a list of construction features or produced documents/plans being preemptively incorporated into the development of the Myford II project by the applicant,

independent of any (1) conditions of approval required by the City or (2) mitigation measures included in the Mitigation Monitoring & Reporting Program (MMRP) required to mitigate any project-specific impacts to a less than significant level. These PDFs are included in order to ensure a safe and successful project upon completion. The proposed project includes the following PDF's:

AQ-A: Prior to the issuance of grading permits, the City Engineer shall confirm that the Grading Plan, Building Plans and Specifications require all construction contractors to comply with South Coast Air Quality Management District's (SCAQMD's) Rules 402 and 403 to minimize construction emissions of dust and particulates. The measures include, but are not limited to, the following:

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.

AQ-B: The applicant shall require by contract specifications that the interior and exterior architectural coatings (paint and primer including parking lot paint) products used would comply with SCAQMD Rule 1113 which requires building envelope coatings to have a volatile organic compound rating of 50 grams per liter or less.

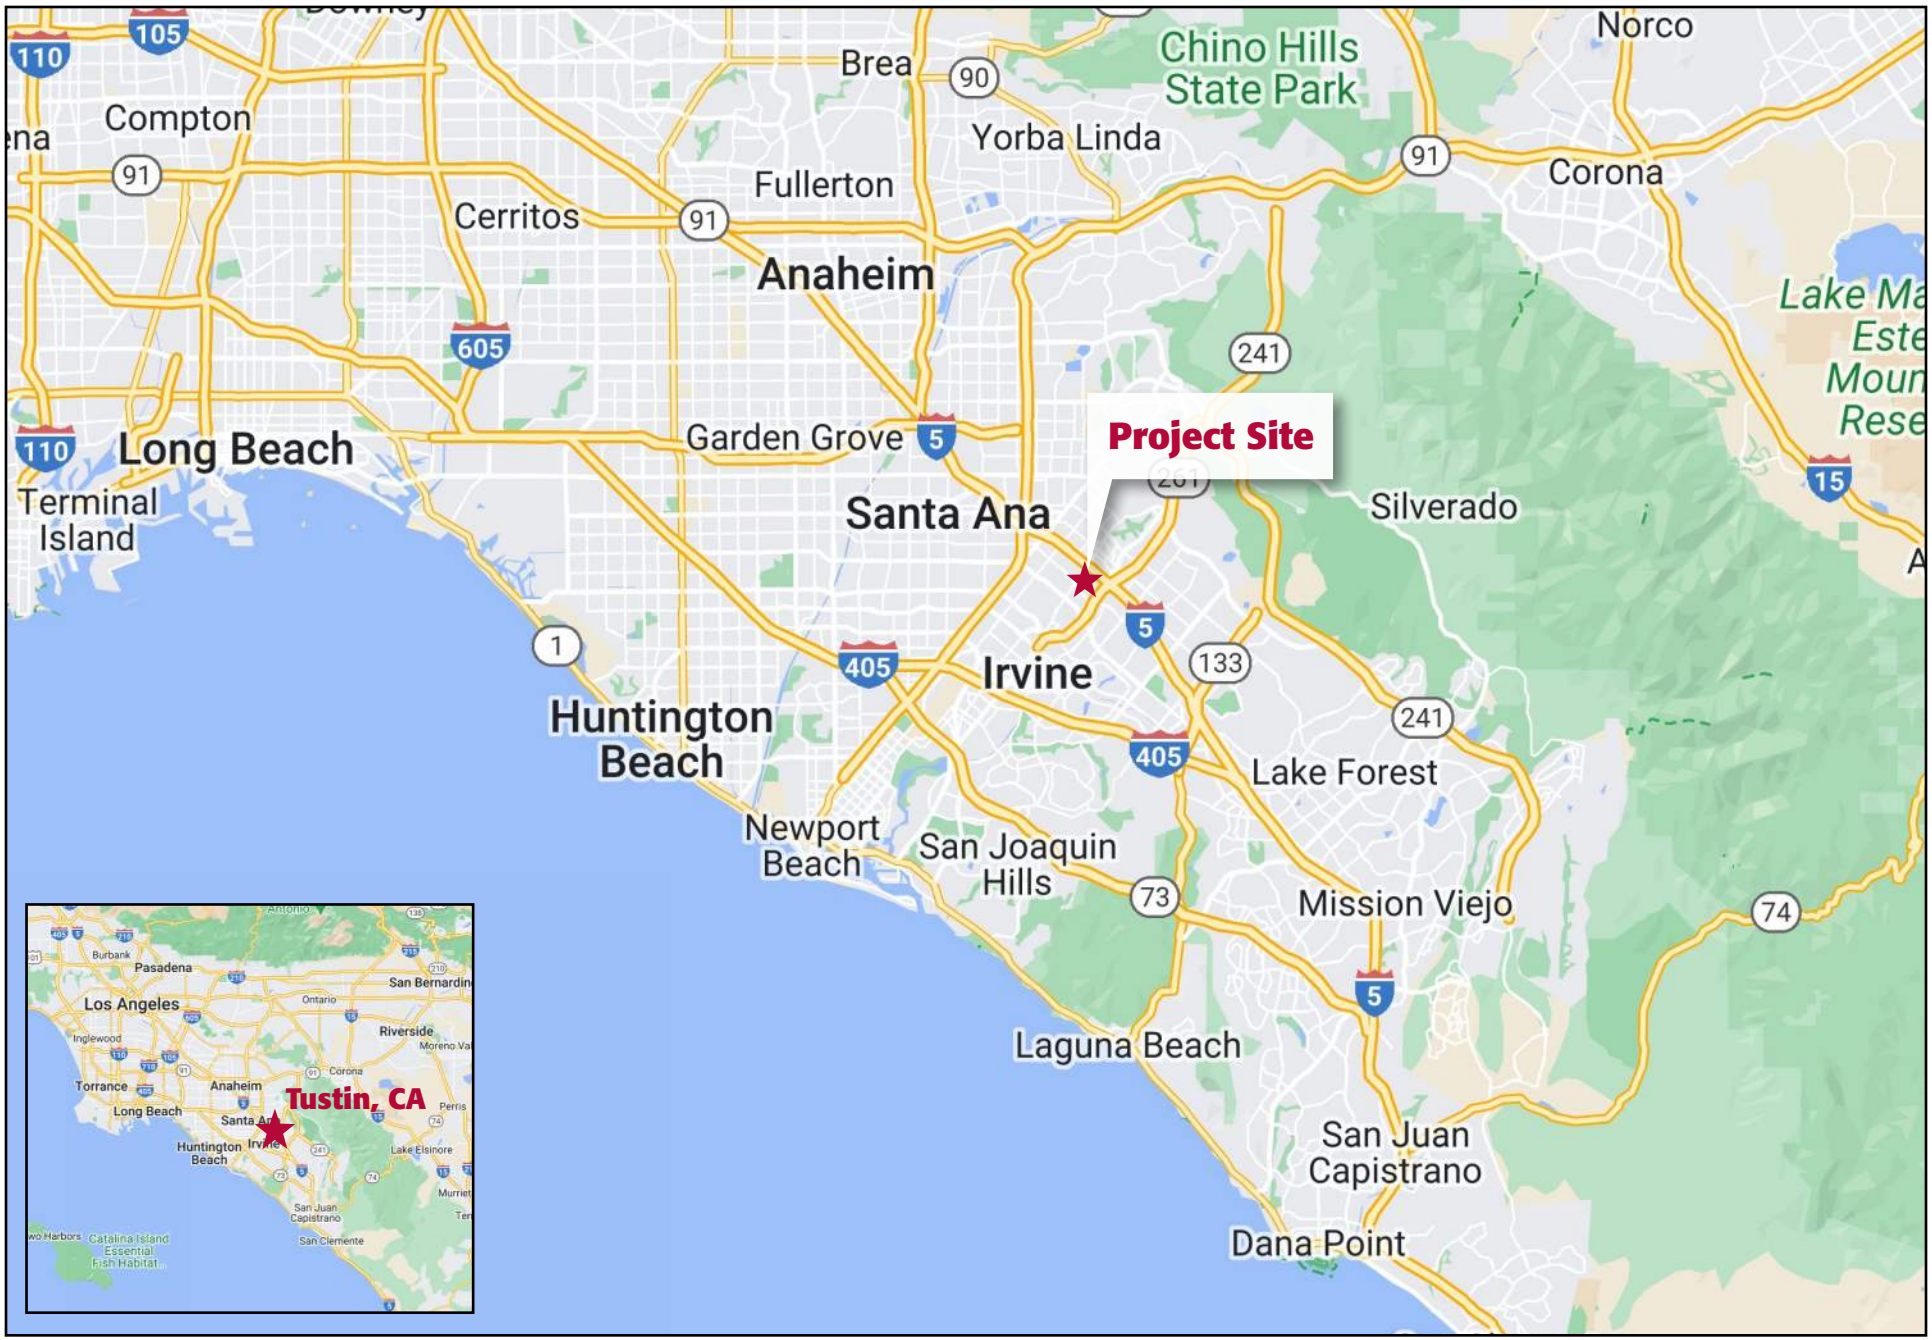
AQ-C: Require diesel powered construction equipment to turn off when not in use per Title 13 of the California Code of Regulations, Section 2449.

AQ-D: Install water-efficient irrigation systems and devices, such as soil moisture-based irrigation controls and sensors for landscaping according to the City's Water Efficient Landscape requirements (Article 9, Chapter 7 of the City's Municipal Code).

AQ-E: The project shall be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. The Building Official, or designee shall ensure compliance prior to the issuance of each building permit. The Title 24 Energy Efficiency Standards (Section 110.10) require buildings to be

designed to have 15 percent of the roof area "solar ready" that will structurally accommodate later installation of rooftop solar panels. If future building operators pursue providing rooftop solar panels, they will submit plans for solar panels prior to occupancy.

AQ-F: The project shall be designed in accordance with the applicable California Green Building Standards (CALGreen) Code (24 CCR, Part 11). The Building Official, or designee shall ensure compliance prior to the issuance of each building permit. These requirements include, but are not limited to:

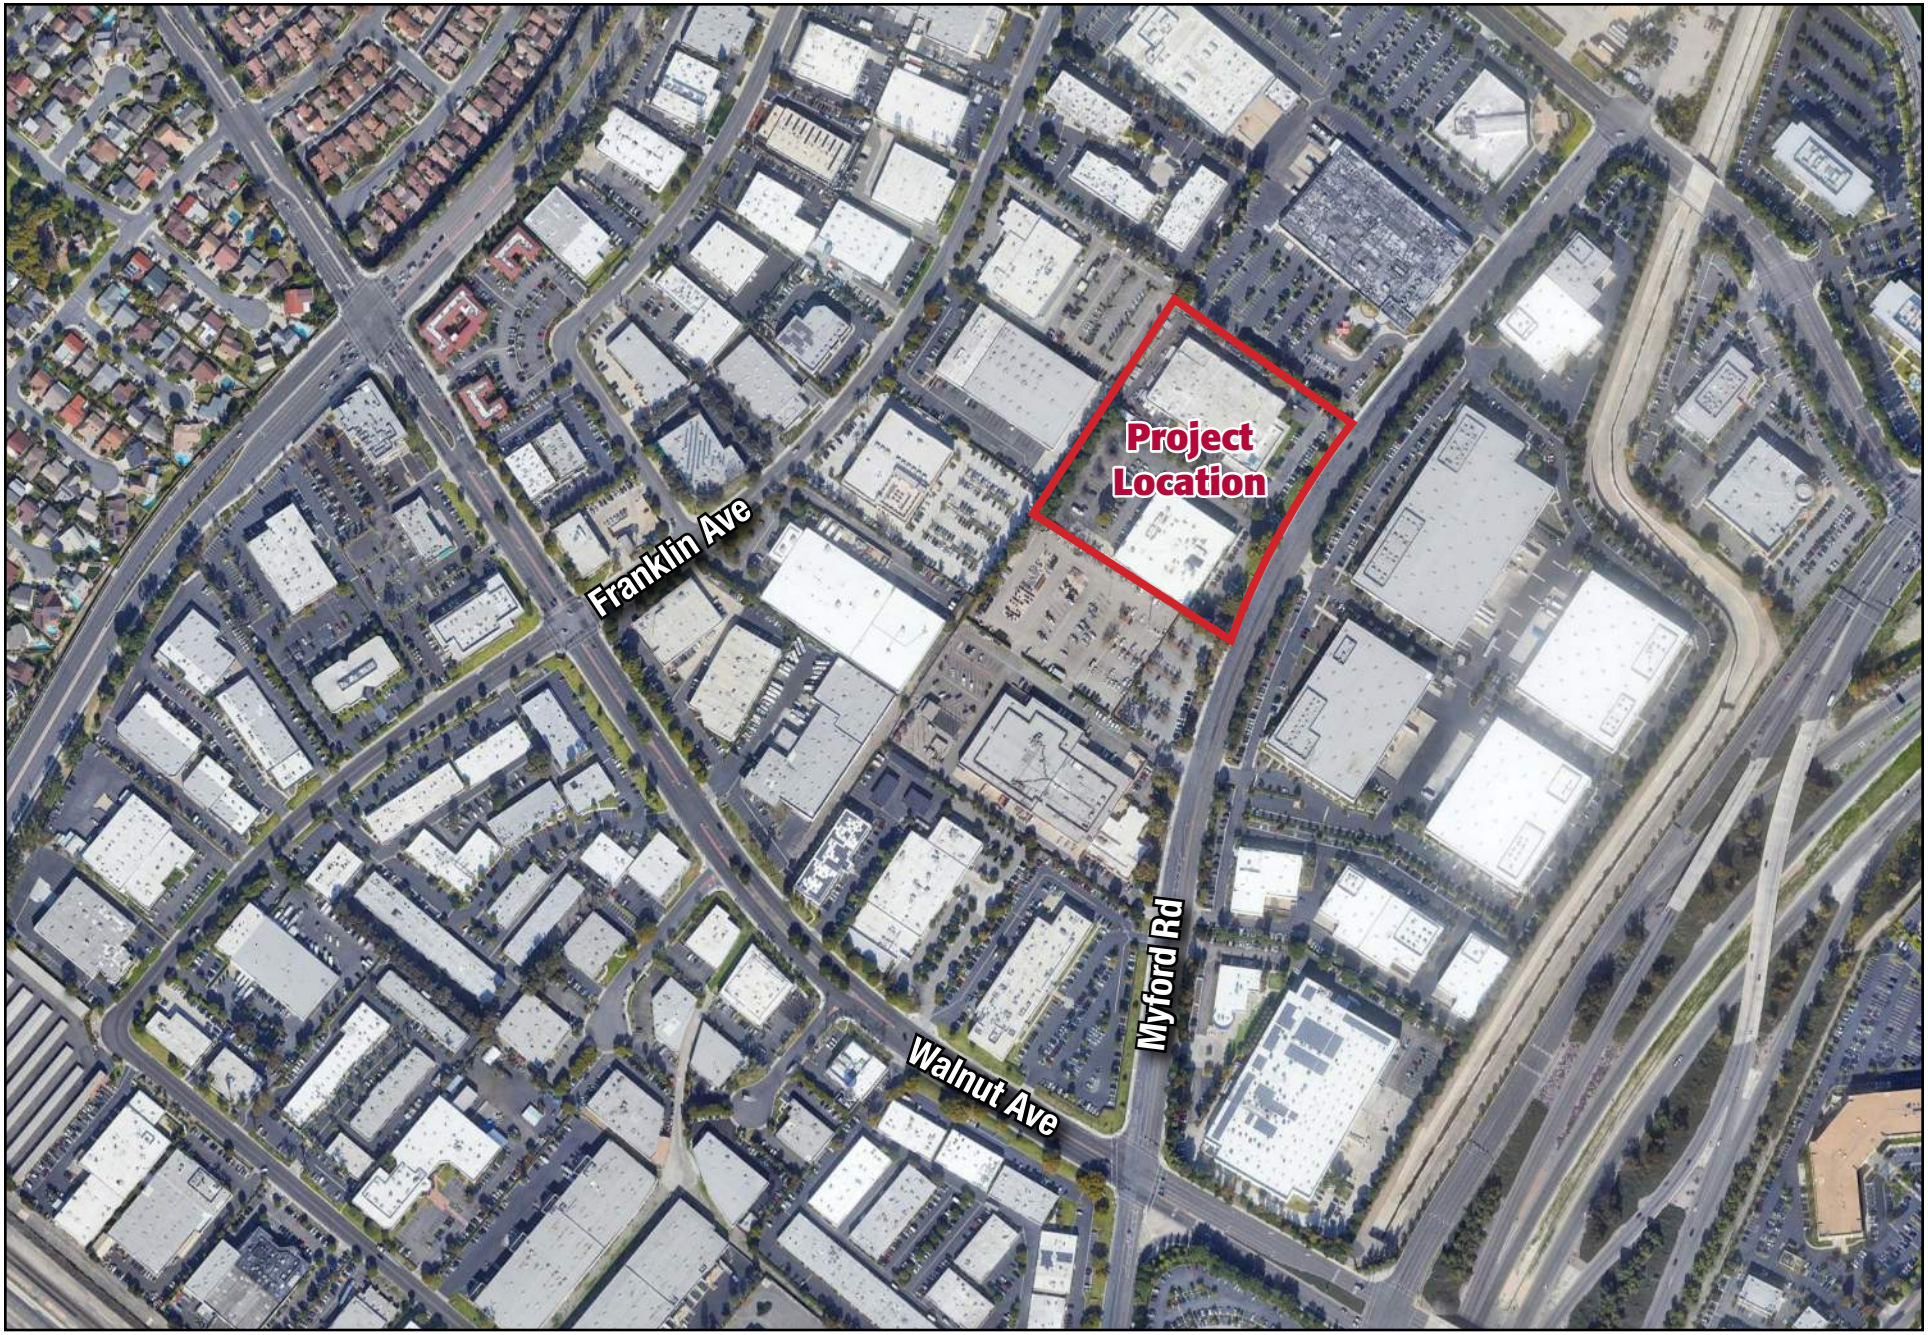


- Design buildings to be water-efficient. Install water-efficient fixtures in accordance with Section 5.303 (nonresidential) of the California Green Building Standards Code Part 11.
- Recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste in accordance with Section 5.408.1 (nonresidential) of the California Green Building Standards Code Part 11.
- Provide storage areas for recyclables and green waste and adequate recycling containers located in readily accessible areas in accordance Section 5.410 (nonresidential) of the California Green Building Standards Code Part 11.
- Provide designated parking for any combination of low-emitting, fuel efficient and carpool/van pool vehicles. At least eight percent of the total parking spaces are required to be designated in accordance Section 5.106.5.2 (nonresidential), Designated Parking for Clean Air Vehicles, of the California Green Building Standards Code Part 11.
- To facilitate future installation of electric vehicle supply equipment (EVSE), nonresidential construction shall comply with Section 5.106.5.3 (nonresidential electric vehicle charging) of the California Green Building Standards Code Part 11.

AQ-G: All on-site forklifts shall be non-diesel and shall be powered by electricity, compressed natural gas, or propane if technically feasible.

BIO-A: Prior to the issuance of grading permits and/or an action that would result in project site disturbance (whichever occurs first) (including but not limited to discing and demolition activities), the project applicant shall submit to the satisfaction of the Director of Community Development/Planning Division, evidence that a pre-construction nesting bird survey has been conducted prior to any ground disturbing activities and removal of vegetation or other potential nesting habitat during the nesting period (generally February 1st to August 31st). If birds are found to be nesting inside or within 250 feet (500 feet for raptors) of the impact area, construction will need to be postponed, at the discretion of a qualified biologist, until it is determined that the nests are no longer active.

GEO-A: Incorporate geotechnical recommendations included in the Geotechnical Investigation prepared for the project by Geotechnical Professionals (February 2022) into design and construction of the project site.



HAZ-A: Prior to issuance of a demolition permit of the on-site structures, an Asbestos and Lead Demolition Survey shall be conducted and all asbestos and lead based paint (LBP) containing building materials shall be removed or stabilized in accordance with applicable Federal and State regulations.

3.0 INITIAL STUDY CHECKLIST

1. **Project title:**

   Myford II Project

2. **Lead agency name and address:**

   City of Tustin
   300 Centennial Way
   Tustin, CA 92780

3. **Contact person and phone number:**

   Leila Carver, Senior Planner Consultant
   (714) 573-3126

4. **Project location:**

   The project site is in the City of Tustin, in Orange County, approximately 0.3 miles west of SR 261 and approximately 0.7 miles west of the I-5 freeway. The City of Irvine is located directly east of the project site across Myford Road. The project site is currently improved with two industrial/office buildings (81,008 and 55,090 square feet), surface parking and landscaping. (APNs) 432-473-13 and 432-473-19.

5. **Project applicant's/sponsor's name and address:**

   Michael Sizemore
   c/o B8 Myford II Industrial Owner LLC
   2442 Dupont Drive
   Irvine, CA 92612

6. **General Plan designation:**

   Current: Planned Community Commercial/Business (PCCB)

   Proposed: No change.

7. **Zoning designation:**

   Current: Planned Community Industrial (PC IND)

   Project Proposes: No change.

8. Other public agencies whose approval is required:

Table 3: Other Permits and Approvals

Agency	Permit or Approval
Tustin Building Division	Demolition Permits, Grading Permits, Building Permits.
Tustin Planning Commission	Tentative Parcel Map (TPM) approval, Design Review (DR) approval, and Mitigated Negative Declaration (MND) approval.
Tustin Engineering Division	Encroachment Permits, Storm Drain Connection Approval, Final Parcel Map approval.
Fire Protection District	Building Plan check and approval. Review for compliance with 2022 California Fire Code, 2022 California Building Code, California Health & Safety Code and Tustin Municipal Code. Plans for fire detection and alarm systems, and automatic sprinklers.
Irvine Ranch Water District (IRWD)	Letter of authorization/consent for proposed improvements to provide water supply connection and sewer connection to new development.
Southern California Edison Company (SCE)	Letter of authorization/consent for proposed improvements to provide electrical supply connection to new development.

9. Project summary:

The proposed project consists of a concrete tilt-up warehouse distribution building of approximately 148,437 square feet including 143,437 square feet of warehouse space, 5,000 square feet of office space on two levels, 103 parking stalls, and 37,004 square feet of landscaping on approximately 7.18 acres of land. The warehouse project would include an approximately 5,000-square feet two-story office area, with associated facilities and improvements such as a perimeter fencing, parking, on-site and perimeter landscaping, lighting, and exterior sidewalks. The proposed industrial warehouse building would be oriented with the nineteen (19) dock doors located on the western side of the building (opposite Myford Road), with a maximum height of approximately 47'-6". The proposed project would have a Lot Coverage of 46.8%, a FAR of 0.475, a minimum 30-foot landscaped front (street side) setback, and a minimum 10-foot side setback, all in accordance with the City's applicable development standards. Vehicular access provisions for the project site would consist of three full-movement, 27' to 35' wide driveways on Myford Road. Passenger vehicles would have the option to access the project site via any of the three project driveways, while trucks would access the project site at either the southerly or northerly 35-foot wide driveways. The project is described in greater detail in Section 2.0, *Description of the Proposed Project*, of this Initial Study.

10. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to PRC Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

NOTE: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See PRC Section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's (NAHC) Sacred Lands File per PRC Section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that PRC Section 21082.3(c) contains provisions specific to confidentiality.

The City has begun the Assembly Bill (AB) 52 tribal consultation. On June 29, 2022, the City initiated tribal consultation with interested California Native American tribes consistent with AB52. The City requested consultation from the following tribes:

1. Campo Band of Diegueno Mission Indians
2. Ewiiaapaayp Band of Kumeyaay Indians
3. Gabrieleño Band of Mission Indians – Kizh Nation
4. Gabrieleno/Tongva San Gabriel Band of Mission Indians
5. Gabrielino/Tongva Nation
6. Gabrielino Tongva Indians of California Tribal Council
7. Gabrielino-Tongva Tribe
8. Juaneño Band of Missions Indians, Acjachemen Nation – Belardes
9. La Posta Band of Diegueno Mission Indians
10. Manzanita Band of Kumeyaay Nation
11. Mesa Grande Band of Diegueno Mission Indians
12. Pala Band of Mission Indians
13. Santa Rosa Band of Cahuilla Indians
14. Soboba Band of Luiseno Indians
15. Sycuan Band of the Kumeyaay Nation

Gabrieleño Band of Mission Indians – Kizh Nation responded to the City's letter and requested consultation and specific mitigation measures, as shown in Section 4.18, *Tribal Cultural Resources*. The balance of the consulted tribes did not respond. Refer to Section 4.18, *Tribal Cultural Resources* of this document for additional information.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- ☐ Aesthetics
- ☐ Agricultural and Forestry Resources
- ☐ Air Quality
- ☐ Biological Resources
- ☐ Cultural Resources
- ☐ Energy
- ☐ Geology/Soils
- ☐ Greenhouse Gas Emissions
- ☐ Hazards & Hazardous Materials
- ☐ Hydrology/Water Quality
- ☐ Land Use/Planning
- ☐ Mineral Resources
- ☐ Noise
- ☐ Population/Housing
- ☐ Public Services
- ☐ Recreation
- ☐ Transportation
- ☒ Tribal Cultural Resources
- ☐ Utilities/Service Systems
- ☐ Wildfire
- ☐ Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation (check one):

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

4.0 ENVIRONMENTAL ANALYSIS

AESTHETICS

ENVIRONMENTAL IMPACTS Issues		Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
1.	**AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:**				
a)	Have a substantial adverse effect on a scenic vista?			X	
b)	Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				X
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

Regional Context

The City of Tustin is in central Orange County (County). The City is located on both the coastal plain and in the Santiago Foothills. I-5 bisects the City into north and south; and the SR 55 divides the westerly portion of the City. The City is comprised of commercial, industrial, and residential developments and encompasses approximately 11.08 square miles, including the City's Sphere of Influence (SOI). Of this land area, 11,145 acres (3,954 acres in the SOI) are designated for industrial uses. Tustin is bordered by the City of Orange and unincorporated County of Orange areas to the north; the City of Irvine to the south; the City of Irvine and unincorporated County of Orange territory to the east; and the City of Santa Ana to the west.

Project Site

The project site consists of two lots fronting onto Myford Road and is located in an infill industrial and commercial area. The project site is bounded by commercial and industrial buildings to the north and west, an industrial warehouse building site to the south, and Myford Road to the east. The southernmost lot features an approximately 81,008 square foot office building and the northernmost features industrial building with a footprint of approximately 55,090 square feet.

On-site vegetation consists of landscaped ornamental vegetation found on the perimeter of the project site and along the parking aisles. No natural habitats exist on-site.

Scenic Views

Under CEQA, a scenic vista is defined as a viewpoint that provides expansive views of a highly-valued landscape for the benefit of the public. The General Plan does not officially designate any scenic vistas near the project site.

A wide variety of natural and open space resources are found in Tustin due to its location on both the coastal plain and in the Santiago Foothills. Views of the Pacific Coast and Saddleback Mountains are visible from hillside areas.

Scenic Resources within Scenic Highways

Scenic highways and routes are a unique component of the circulation system as they traverse areas of unusual scenic or aesthetic value. The purpose of the California Scenic Highway Program, which was established in 1963, is to "Preserve and protect scenic highway corridors from change which would diminish the aesthetic value of lands adjacent to highways." This program provides guidance for signage, aesthetics, grading, and screening to help maintain the scenic value of the roadway. No highways within the City are eligible or officially designated state or county scenic highways. The closest State designated scenic highway is a portion of State Route (SR-1) that is approximately 8.5 miles southwest of the project site.[1] Therefore, the provisions of the California Scenic Highway Program do not apply.

a) Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. The project site is located approximately four miles west of the Santa Ana Mountains and approximately 40 miles south of the San Gabriel Mountains. Additionally, the project site is surrounded by industrial developments; the closest residential uses are located approximately 1,600 feet (0.30 miles to the northwest). Therefore, the project would not compromise viewsheds in the vicinity. Because of the vast distance to prominent scenic features in the area and the lack of impact to viewsheds, in particularly residential uses, impacts associated with scenic vistas would be less than significant.

b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. As described above, no highways within the City are eligible or officially designated state or county scenic highways. The closest Officially Designated State Scenic Highway is a portion of SR-1 that is approximately 8.5 miles southwest of the project site.

[1] California Department of Transportation (DOT). California Scenic Highways. Retrieved from https://www.arcgis.com/home/webmap/viewer.html?useExisting=1&layers=f0259b1ad0fe4093a5604c9b838a486a. Accessed March 16, 2022.

Therefore, the proposed project would not substantially damage scenic resources within a State Scenic Highway. No impact would occur.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No Impact. The project site is located in an urbanized area consisting of predominately industrial and commercial uses. The project site consists of two industrial/office buildings (81,008 and 55,090 square feet), ancillary auto parking lot, and landscaping. The project site is surrounded by industrial developments and no residential dwelling units exist on-site or in the vicinity. The project would replace the existing industrial/office buildings with a warehouse distribution building. The two (2) existing buildings located on the project site range in height of 25 to 30 feet. The proposed warehouse building would include an approximate height of 47'-6".

Consistent with the Irvine Industrial Complex Planned Community District Regulations, the proposed project would have a FAR of 0.475, a minimum 30-foot landscaped front (street side) setback, and a minimum 10-foot side setback. Landscaping would cover approximately 37,004 square feet of the project site, which equates to approximately 11.8 percent of the site area and would be installed in all areas not devoted to the building, parking, and traffic. The project would be required to provide a minimum of 76 parking stalls, and would provide 103 parking stalls. Although the visual character of the project site would change slightly due to the increased height, size, and siting of the proposed warehouse distribution building, the project would be consistent with the land use and zoning identified for the project site (see Section 4.11, *Land Use and Planning)*. Further, the project would be consistent with the Irvine Industrial Complex Planned Community District Regulations which provide standards for site density, setbacks, building height, landscaping, and other features related to the character of the project. Accordingly, the change in visual character would be consistent with the applicable zoning and other regulations governing scenic quality. No impact would occur.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. Existing sources of light and glare in the immediate project area include streetlights and outdoor safety and security lighting associated with adjacent developments.

Short-Term Construction Impacts

In accordance with Section 4617(e) of the City's Municipal Code, project construction activity would be limited to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday and 9:00 a.m.to 5:00 p.m. Saturdays, excluding city observed federal holidays (unless

otherwise approved by the City of Tustin). Nighttime lighting would not be provided until the project is operational. Therefore, no short-term impacts associated with light and glare would occur.

Long-Term Construction Impacts

The project would include the implementation of on-site safety and security lighting. Consistent with Section 9271 of the City's Municipal Code, all outdoor lighting would be designed so as to minimize impacts from light pollution including light trespass and glare to minimize conflict caused by unnecessary illumination. Further, all outdoor lighting fixtures that would be used to illuminate the premises, architectural features or landscape features would be directed, shielded, or located in such a manner that the light source would not be directed off-site. Thus, all exterior lighting would be directed or shielded to prevent light trespassing onto nearby properties. Additionally, the project would use a variety of non-reflective building materials, and although some new reflective improvements (i.e., windows and building front treatments) would be introduced to the project site, the project would not be a source of glare in the project area. Therefore, long-term impacts associated with light and glare would be less than significant.

Cumulative Impacts

The potential aesthetic impacts related to views and aesthetics are generally site specific. As discussed above, project-related impacts to scenic vistas would be less than significant, and the proposed project would not result in any impacts to on-site visual resources because there are none. In addition, the proposed project would also be consistent with the land use and development regulations contained in pertinent planning documents. Lighting and sources of glare, while not always site-specific, would be consistent with the majority of the surrounding urban area and would be used during similar hours as surrounding uses. While the proposed project in conjunction with past, present, and reasonably foreseeable development would change the appearance of the site and surrounding area, future development projects would be expected to be conditioned to follow applicable local planning and design guidelines regarding building design including materials, coloration, and landscaping. Therefore, aesthetic impacts are not expected to be cumulatively considerable and impacts would be less than significant.

AGRICULTURE AND FORESTRY RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
2. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

Agricultural Resources

The project site was used historically for agricultural uses prior to 1938. The site has not had active agricultural uses/operations since at least 1979-1980, when the project site was developed with the two existing industrial/office buildings.[2],[3] According to the California Department of Conservation Important Farmland Map, the project site is designated as Urban and Built-Up Land. The nearest designated area designated as either Prime Farmland, Unique Farmland, or Farmland

2 Avocet Environmental, Inc. (2022). *Phase I Environmental Site Assessment for 14321 Myford Road.*
3 Avocet Environmental, Inc. (2022). *Phase I Environmental Site Assessment for 14351 Myford Road*.

of Statewide Importance is located approximately 2.7 miles to the east.[4] Additionally, the project site is not subject to a Williamson Act Contract.[5]

Forestry Resources

The project site consists of two lots fronting onto Myford Road and is surrounded by existing development. The southernmost lot features an approximately 81,008 square foot office building with a footprint of and the northernmost features industrial building with a footprint of approximately 55,090 square feet. On-site vegetation consists of landscaped ornamental vegetation found on the perimeter of the project site and along the parking aisles. No natural habitats exist on-site.

The project site does not meet the definition of lands designated as forestland or timberland as defined by PRC Sections 12220(g), 4526, and 51104(g).

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

d) Result in the loss of forest land or conversion of forest land to non-forest use?

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact (a-e). As stated above, the project site is not currently used for agricultural purposes and has not been used for agricultural uses/operations since at least 1980. The proposed project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-farmland; the project site is not subject of a Williamson Act Contract. The project site is located in the Planned Community Industrial PC IND zone. Implementation of the project would not conflict with an existing zoning for, or cause rezoning of, forest land (as defined in PRC Section 12220(g)), timberland (as defined by PRC Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)). Further, the project would not involve any changes in the existing environment which, due to their location or nature, could result in

[5] County of Orange. (2012). Orange County General Plan, Resources Element. Retrieved from https://ocds.ocpublicworks.com/sites/ocpwocds/files/import/data/files/40235.pdf. Accessed March 17, 2022.

conversion of Farmland, to non-agricultural uses or conversion of forest land to non-forest uses. No impacts related to the loss of farmland would occur.

Cumulative Impacts

The potential impacts related to agricultural and forestry resources are typically site specific and site specific BMPs are implemented at the proposed project level. The project site is not currently used for agricultural purposes and has not been used for agricultural uses/operations since at least 1980. The proposed project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-farmland; the project site is not subject of a Williamson Act Contract. Thus, the proposed project would have no impact on agricultural and forestry resources. Therefore, the proposed project would not contribute to a cumulatively considerable impact in the conversion of Farmland to non-farmland.

AIR QUALITY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			X	
c) Expose sensitive receptors to substantial pollutant concentrations?			X	
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?				X

An Air Quality Assessment was prepared for the proposed project by Kimley-Horn and Associates in May 2022. This report is summarized below and are included as **Appendix A** of this Initial Study.

Air Pollutants of Concern

The air pollutants emitted into the ambient air by stationary and mobile sources are regulated by state and federal laws. These regulated air pollutants are known as "criteria air pollutants" and are categorized into primary and secondary pollutants.

Primary air pollutants are emitted directly from sources. Carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxide (NO_X), sulfur dioxide (SO_2), coarse particulate matter (PM_{10}), fine particulate matter ($PM_{2.5}$), and lead are primary air pollutants. Of these, CO, NO_X, SO_2, PM_{10}, and $PM_{2.5}$ are criteria pollutants. ROG and NO_X are criteria pollutant precursors and form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere. For example, the criteria pollutant ozone (O_3) is formed by a chemical reaction between ROG and NO_X in the presence of sunlight. O_3 and nitrogen dioxide (NO_2) are the principal secondary pollutants.

Toxic Air Contaminants

Toxic air contaminants (TACs) are airborne substances that can cause short-term (acute) or long-term (i.e. chronic, carcinogenic or cancer causing) adverse human health effects (i.e., injury or

illness). TACs include both organic and inorganic chemical substances. They may be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and painting operations. The current California list of TACs includes more than 200 compounds, including particulate emissions from diesel-fueled engines.

California Air Resources Board (CARB) identified diesel particulate matter (DPM) as a toxic air contaminant. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine. Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alvolar regions of the lung.

Ambient Air Quality

CARB monitors ambient air quality at approximately 250 air monitoring stations across the State. These stations usually measure pollutant concentrations ten feet above ground level; therefore, air quality is often referred to in terms of ground-level concentrations. Existing levels of ambient air quality, historical trends, and projections near the project are documented by measurements made by the South Coast Air Quality Management District (SCAQMD), the air pollution regulatory agency in the South Coast Air Basin (SCAB) that maintains air quality monitoring stations which process ambient air quality measurements.

Pollutants of concern in the SCAB include O_3, PM_{10}, and $PM_{2.5}$. The closest air monitoring station to the project that monitors ambient concentrations of these pollutants is the Anaheim Pampas Lane Monitoring Station (located approximately 9.75 miles to the northwest). Local air quality data from 2018 to 2020 are provided in **Table 1: Project Building Summary**, which lists the monitored maximum concentrations and number of exceedances of state or federal air quality standards for each year.

Table 4: Ambient Air Quality Data

Criteria Pollutant	2018	2019	2020
Ozone (O_3) [1]			
1-hour Maximum Concentration (ppm)	0.112	0.096	0.142
8-hour Maximum Concentration (ppm)	0.071	0.082	0.097
Number of Days Standard Exceeded			
CAAQS 1-hour (>0.09 ppm)	-	-	-
NAAQS 8-hour (>0.070 ppm)	0	1	6
Carbon Monoxide (CO) [1]			
1-hour Maximum Concentration (ppm)	2.31	2.44	2.31
Number of Days Standard Exceeded			
NAAQS 1-hour (>35 ppm)	0	0	0
CAAQS 1-hour (>20 ppm)	0	0	0
Nitrogen Dioxide (NO_2) [1]			
1-hour Maximum Concentration (ppm)	0.066	0.059	0.071
Number of Days Standard Exceeded			
NAAQS 1-hour (>100 ppm)	0	0	0
CAAQS 1-hour (>0.18 ppm)	0	0	0
Particulate Matter Less Than 10 Microns (PM_{10}) [1]			
National 24-hour Maximum Concentration	94.6	127.6	74.8
State 24-hour Maximum Concentration	94.6	127.1	74.5
Number of Days Standard Exceeded			
NAAQS 24-hour (>150 µg/m^3)	0	0	0
CAAQS 24-hour (>50 µg/m^3)	2	4	5
Particulate Matter Less Than 2.5 Microns ($PM_{2.5}$) [1]			
National 24-hour Maximum Concentration	63.1	36.1	60.2
State 24-hour Maximum Concentration	68.0	37.1	64.8
Number of Days Standard Exceeded			
NAAQS 24-hour (>35 µg/m^3)	7	4	12

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million; µg/m^3 = micrograms per cubic meter; – = not measured

[1] Measurements taken at the Anaheim-Pampas Lane Monitoring at 1630 W. Pampas Lane, Anaheim, California 92802 (CARB#30178)

Source: All pollutant measurements are from the CARB Aerometric Data Analysis and Management system database (https://www.arb.ca.gov/adam) except for CO, which were retrieved from the CARB Air Quality and Meteorological Information System (https://www.arb.ca.gov/aqmis2/aqdselect.php).

Sensitive Receptors

Sensitive populations are more susceptible to the effects of air pollution, more so than is the general population. Sensitive receptors that are in proximity to localized sources of toxics are of particular concern. Land uses considered sensitive receptors include residences, schools, playgrounds, childcare centers, long-term health care facilities, rehabilitation centers,

convalescent centers, and retirement homes. The nearest residential community is located approximately 1,600 feet to the northwest along Tustin Ranch Road.

Methodology

This air quality impact analysis considers construction and operational impacts associated with the project. Construction equipment, trucks, worker vehicles, and ground-disturbing activities associated with project construction would generate emissions of criteria air pollutants and precursors. Air quality impacts were assessed according to methodologies recommended by CARB and the SCAQMD. Where criteria for air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod). CalEEMod is a Statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects.

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. As part of its enforcement responsibilities, the EPA requires each state with nonattainment areas to prepare and submit a State Implementation Plan that demonstrates the means to attain the federal standards. The State Implementation Plan must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under State law, the California Clean Air Act (CCAA) requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the state and federal ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The project is located within the SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the Federal Clean Air Act (FCAA), to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 Air Quality Management Plan (AQMP). The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state (California) and national air quality standards. The 2016 AQMP is a regional and multi-agency effort including the SCAQMD, the CARB, the SCAG, and the EPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2016 RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The project is subject to the SCAQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- **Consistency Criterion No. 1:** The project would not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- **Consistency Criterion No. 2**: The project would not exceed the assumptions in the AQMP or increments based on the years of the project build-out phase.

According to the SCAQMD's CEQA Air Quality Handbook, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS).

The violations to which Consistency Criterion No. 1 refers are CAAQS and NAAQS. As shown in **Table 5: Construction-Related Emissions and Table 6: Long-Term Operational Emissions**, the project would not exceed construction or operation emission standards. Therefore, the project would not contribute to an existing air quality violation. Thus, the project is consistent with the first criterion.

Concerning Consistency Criterion No. 2, the AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans. The project is consistent with the land use designation and development density presented in the City's General Plan and therefore would not exceed the population or job growth projections used by the SCAQMD to develop the AQMP. Thus, the project is consistent with the second criterion.

Based on these criteria, the project would not conflict with or obstruct implementation of the AQMP.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact.

Construction Emissions

Construction associated with the project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the project area include O_3-precursor pollutants (i.e. ROG and NO_X) and PM_{10} and $PM_{2.5}$. Construction-generated emissions are short term and of temporary duration, lasting only as long as construction

activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities as well as weather conditions and the appropriate application of water.

Construction activities associated with the project are estimated to be completed within 1 year. Construction-generated emissions associated with the project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See **Appendix A** for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the project are summarized in **Table 5: Construction-Related Emissions.**

Table 5: Construction-Related Emissions

Construction Year	Maximum Pounds Per Day					
	ROG	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Year 1 (2024)	23.92	27.21	23.19	0.05	9.82	5.50
SCAQMD Threshold	*75*	*100*	*550*	*150*	*55*	*150*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**	**No**	**No**
Notes: SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No adjustments were applied to equipment exhaust. Refer to **Appendix A** for Model Data Outputs.						
Source: CalEEMod version 2020.4.0. Refer to **Appendix A** for model outputs.						

Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby. SCAQMD Rules 402 and 403 (prohibition of nuisances, watering of inactive and perimeter areas, track out requirements, etc.), are applicable to the project and were applied in CalEEMod to minimize fugitive dust emissions. As identified in Section 2.0, *Description of Proposed Project*, PDF AQ-A requires the implementation of Rule 402 and 403 dust control techniques to minimize PM_{10} and $PM_{2.5}$ concentrations. This Project Design Feature would be required to ensure compliance with SCAQMD Rules and Regulations, which would be verified and enforced through the City's development review process.

Rule 1113 provides specifications on painting practices and regulates the ROG content of paint. As required by law, all architectural coatings for the project structures would comply

with SCAQMD Rule 1113. PDF AQ-B requires implementation of Rule 1113 which limits the VOC content of paint to 50 grams per liter or less. Compliance with PDF AQ-B would be required to ensure compliance with SCAQMD Rules and Regulations, which would be verified and enforced through the City's development review process.

As shown in **Table 5**, all criteria pollutant emissions would remain below their respective thresholds. While impacts would be considered less than significant, the project would be subject to SCAQMD Rules 402, 403, and 1113, described in the Regulatory Framework subsection above and required by PDFs AQ-A and AQ-B.

Operational Emissions

Project-generated emissions would be primarily associated with motor vehicle use and area sources, such as the use of landscape maintenance equipment and architectural coatings. Long-term operational emissions attributable to the project are summarized in **Table 6: Long-Term Operational Emissions**. Note that emissions rates differ from summer to winter because different weather patterns affect pollutant mixing, dispersion, O_3 formation, and other factors. **Table 6** also provides the emissions associated with operations of the two existing industrial/office buildings totaling approximately 136,098 square feet. As shown in **Table 6**, the operational project emissions are below the SCAQMD's thresholds, and therefore impacts would be less than significant.

Area Source Emissions

Area source emissions would be generated due to on-site equipment, architectural coating, and landscape maintenance equipment that were previously not present on the site. As shown in **Table 6**, the net area source emissions from the project represent a de minimis impact relative to the SCAQMD thresholds for each of the criteria pollutants analyzed. Therefore, the project would not violate any air quality standards or contribute substantially to an existing or projected air quality violation. As a result, impacts associated with operational air quality related specifically to area source emissions would be less than significant.

Energy Source Emissions

Energy source emissions would be generated due to electricity and natural gas usage associated with the project. Primary uses of electricity and natural gas by the project would be for miscellaneous warehouse equipment, space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. As shown in **Table 6**, net energy source emissions from the project represent a de minimis impact relative to the SCAQMD thresholds for each of the criteria pollutants analyzed. As such, the project would not violate any air quality standards or contribute substantially to an existing or projected air quality violation. As a result, impacts associated with operational air quality related specifically to energy source emissions would be less than significant.

Off-Road Equipment

Operational off-road emissions would be generated by off-road cargo handling equipment used during operational activities. For this project it was assumed that the warehouses would include three forklifts and one yard truck per SCAQMD data.[6]

Emergency Backup Generators

As the Project warehouse is speculative, it is unknown whether emergency backup generators would be used. Backup generators would only be used in the event of a power failure and would not be part of the Project's normal daily operations. Nonetheless, emissions associated with this equipment were included to be conservative. Emissions from an emergency backup generator for each warehouse building were calculated separately from CalEEMod; refer to Appendix A. However, CalEEMod default emissions rates were used. If backup generators are required, the end user would be required to obtain a permit from the SCAQMD prior to installation. Emergency backup generators must meet SCAQMD's Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines), which would minimize emissions.

Mobile Sources

Mobile sources are emissions from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, NO_X, PM_{10}, and $PM_{2.5}$ are all pollutants of regional concern. NO_X and ROG react with sunlight to form O_3, known as photochemical smog. Additionally, wind currents readily transport PM_{10} and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

Project-generated vehicle emissions are based on the trip generation within the project Trip Generation and Vehicle Miles Traveled (VMT) Memorandum (see **Appendix H**) and incorporated into CalEEMod as recommended by the SCAQMD. Per the project Trip Generation and VMT Memorandum, using the High-Cube Fulfillment Center Warehouse

trip generation rate (Institute of Transportation Engineers [ITE] code 155) the project would generate 956 daily vehicle trips (928 passenger cars and 28 trucks). Additionally, the existing industrial/office uses are currently estimated to generate 1,066 (non-passenger car equivalent) daily trips. When deducted, the trips generated by the project results in a decrease of 110 daily trips.

As shown in **Table 6**, net mobile source emissions would be below SCAQMD thresholds for each of the criteria pollutants analyzed. As such, the project would not violate any air quality standards or contribute substantially to an existing or projected air quality violation. As a result, impacts associated with operational air quality related specifically to mobile emissions would be less than significant.

Cumulative Short-Term Emissions

The SCAB is designated nonattainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards and nonattainment for O_3 and $PM_{2.5}$ for Federal standards. Appendix D of the *SCAQMD White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (2003) notes that projects that result in emissions that do not exceed the project-specific SCAQMD regional thresholds of significance should result in a less than significant impact on a cumulative basis unless there is other pertinent information to the contrary. Therefore, if a project is estimated to result in emissions that do not exceed the thresholds, the project's contribution to the cumulative impact on air quality in the SCAB would not be cumulatively considerable. As shown in **Table 5** above, project construction-related emissions by themselves would not exceed the SCAQMD significance thresholds for criteria pollutants. Therefore, the proposed project would not generate a cumulatively considerable contribution to air pollutant emissions during construction.

The SCAQMD has developed strategies to reduce criteria pollutant emissions outlined in the AQMP pursuant to the FCAA mandates. The analysis assumed fugitive dust controls would be utilized during construction, including frequent water applications. SCAQMD rules, mandates, and compliance with adopted AQMP emissions control measures would also be imposed on construction projects throughout the SCAB, which would include related projects. Compliance with SCAQMD rules and regulations would further reduce the project construction-related impacts. Therefore, project-related construction emissions, combined with those from other projects in the area, would not substantially deteriorate local air quality. Construction emissions associated with the project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts.

Cumulative Long-Term Impacts

The SCAQMD has not established separate significance thresholds for cumulative operational emissions. The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, individual project emissions contribute to existing

cumulatively significant adverse air quality impacts. The SCAQMD developed the operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to the SCAB's existing air quality conditions. Therefore, a project that exceeds the SCAQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact. As shown in **Table 6**, the project operational emissions would not exceed the SCAQMD thresholds. Therefore, impacts would be less than significant.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact.

Localized Construction Significance Analysis

The nearest sensitive receptor is a residential community located 1,600 feet (0.30 miles/488 meters) northwest of the project along Tustin Ranch Road. To identify impacts to sensitive receptors, the SCAQMD recommends addressing LSTs for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the Final Localized Significance Threshold Methodology (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with project-specific emissions.

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, **Table 7: Equipment-Specific Grading Rates**, is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Central Orange County (SRA 17) since this area includes the project. LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects that disturb areas less than or equal to 5 acres in size. Project construction is anticipated to disturb a maximum of 2.5 acres in a single day. As the LST guidance provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the site, the LSTs for a 2.5-acre threshold were interpolated and utilized for this analysis.

Table 7: Equipment-Specific Grading Rates

Construction Phase	Equipment Type	Equipment Quantity	Acres Graded per 8-Hour Day	Operating Hours per Day	Acres Graded per Day
Grading	Tractors	3	0.5	8	1.5
	Graders	1	0.5	8	0.5
	Dozers	1	0.5	8	0.5
Total Acres Graded per Day					**2.5**
Source: CalEEMod version 2020.4.0. Refer to **Appendix A** for model outputs.					

The SCAQMD's methodology states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. The nearest sensitive receptors are the single-family residences located 1,600 feet (0.30 miles/488 meters) northwest of the project. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. Therefore, LSTs for receptors located at 488 meters were interpolated and utilized in this analysis. **Table 8: Localized Significance of Construction Emissions** presents the results of localized emissions during each construction phase. **Table 8** shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Significant impacts would not occur concerning LSTs during construction.

Table 8: Localized Significance of Construction Emissions

Construction Activity	Maximum Pounds Per Day			
	NO_x	CO	PM_{10}	$PM_{2.5}$

Localized Operational Significance Analysis

According to the SCAQMD LST methodology, LSTs would apply to the operational phase of a project only if it includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). Since the proposed project is a warehouse distribution building, the operational phase LST protocol is conservatively applied to both the area source and all the mobile source emissions. LSTs thresholds for receptors were interpolated for 488 meters because the closest receptors are 488 meters away. Although the project site is 7.18 acres, the 5-acre LST threshold was also conservatively used for the project, as the LSTs increase with the size of the site.

The LST analysis only includes on-site sources. However, the CalEEMod model outputs do not separate on- and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions shown in **Table 9: Localized Significance of Operational Emissions**, conservatively include all on-site project-related stationary sources and 100 percent of the project-related new mobile sources, since a portion of mobile sources could include trucks idling on-site. **Table 9** shows that the maximum daily emissions of these

pollutants during operations would not result in significant concentrations of pollutants at nearby sensitive receptors. Therefore, significant impacts would not occur concerning LSTs during operational activities.

Table 9: Localized Significance of Operational Emissions

Activity	Maximum Pounds Per Day			
	NO_x	CO	PM_{10}	$PM_{2.5}$
On-Site and Mobile Source Emissions	29.61	67.61	7.74	2.50

Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**
Source: CalEEMod version 2020.4.0. Refer to **Appendix A** for model outputs.				

Criteria Pollutant Health Impacts

On December 24, 2018, the California Supreme Court issued an opinion identifying the need to provide sufficient information connecting a project's air emissions to health impacts or explain why such information could not be ascertained (*Sierra Club v. County of Fresno* [Friant Ranch, L.P.] [2018] Cal.5th, Case No. S219783).

The Friant Ranch project was a 942-acre Specific Plan that involved a commercial master planned community of approximately 2,500 dwelling units and extensive commercial supporting development. The anticipated air quality impacts resulting from this development included significant and unavoidable emissions of multiple criteria pollutants (including significant emissions of both primary O_3 precursors [NO_X and ROGs]) at levels that exceeded the daily thresholds of significance. As noted above and shown in **Table 6**, the project's operational emissions are below SCAQMD's significance thresholds, resulting in a less than significant impact and therefore the project is consistent with the *Sierra Club v. County of Fresno* opinion.

The SCAQMD has set its CEQA significance thresholds based on the FCAA, which defines a major stationary source (in extreme ozone nonattainment areas such as the South Coast Air Basin) as emitting 10 tons per year. The thresholds correlate with the trigger levels for the federal New Source Review (NSR) Program and SCAQMD Rule 1303 for new or modified sources. The NSR Program[7] was created by the FCAA to ensure that stationary sources of air pollution are constructed or modified in a manner that is consistent with attainment of health-based federal ambient air quality standards. The federal ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect the public health. Therefore, projects that do not exceed the SCAQMD's LSTs and mass emissions thresholds would not violate any air quality standards or

[7] Code of Federal Regulation (CFR) [i.e., PSD (40 CFR 52.21, 40 CFR 51.166, 40 CFR 51.165 (b)), Non-attainment NSR (40 CFR 52.24, 40 CFR 51.165, 40 CFR part 51, Appendix S)

contribute substantially to an existing or projected air quality violation and no criteria pollutant health impacts.

NO_X and ROG are precursor emissions that form ozone in the atmosphere in the presence of sunlight where the pollutants undergo complex chemical reactions. It takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources. Breathing ground-level ozone can result in health effects that include: reduced lung function, inflammation of airways, throat irritation, pain, burning, or discomfort in the chest when taking a deep breath, chest tightness, wheezing, or shortness of breath. In addition to these effects, evidence from observational studies strongly indicates that higher daily ozone concentrations are associated with increased asthma attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that ozone can make asthma symptoms worse and can increase sensitivity to asthma triggers.

According to the SCAQMD's 2016 AQMP, ozone, NO_X, and ROG have been decreasing in the Basin since 1975 and are projected to continue to decrease in the future. Although vehicle miles traveled in the Basin continue to increase, NO_X and ROG levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting vehicles. NO_X emissions from electric utilities have also decreased due to the use of cleaner fuels and renewable energy. The 2016 AQMP demonstrates how the SCAQMD's control strategy to meet the 8-hour ozone standard in 2023 would lead to sufficient NO_X emission reductions to attain the 1-hour ozone standard by 2022. In addition, since NO_X emissions also lead to the formation of $PM_{2.5}$, the NO_X reductions needed to meet the ozone standards will likewise lead to improvement of $PM_{2.5}$ levels and attainment of $PM_{2.5}$ standards.

The SCAQMD's air quality modeling demonstrates that NO_X reductions prove to be much more effective in reducing ozone levels and will also lead to significant improvement in $PM_{2.5}$ concentrations. NO_X-emitting stationary sources regulated by the SCAQMD include Regional Clean Air Incentives Market (RECLAIM) facilities (e.g., refineries, power plants, etc.), natural gas combustion equipment (e.g., boilers, heaters, engines, burners, flares) and other combustion sources that burn wood or propane. The 2016 AQMP identifies robust NO_X reductions from new regulations on RECLAIM facilities, non-refinery flares, commercial cooking, and residential and commercial appliances. Such combustion sources are already heavily regulated with the lowest NO_X emissions levels achievable but there are opportunities to require and accelerate replacement with cleaner zero-emission alternatives, such as residential and commercial furnaces, pool heaters, and backup power equipment. The AQMD plans to achieve such replacements through a combination of regulations and incentives. Technology-forcing regulations can drive development and commercialization of clean technologies, with future year requirements for new or existing

equipment. Incentives can then accelerate deployment and enhance public acceptability of new technologies.

The 2016 AQMP also emphasizes that beginning in 2012, continued implementation of previously adopted regulations will lead to NO_X emission reductions of 68 percent by 2023 and 80 percent by 2031. With the addition of 2016 AQMP proposed regulatory measures, a 30 percent reduction of NO_X from stationary sources is expected in the 15-year period between 2008 and 2023. This is in addition to significant NO_X reductions from stationary sources achieved in the decades prior to 2008.

As previously discussed, localized effects of on-site project emissions to nearby receptors were found to be less than significant (refer to **Table 8** and **Table 9**). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. As shown above, project-related emissions would not exceed the regional thresholds or the LSTs, and therefore would not exceed the ambient air quality standards or cause an increase in the frequency or severity of existing violations of air quality standards. Therefore, sensitive receptors would not be exposed to criteria pollutant levels in excess of the health-based ambient air quality standards.

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The SCAB was re-designated as attainment in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addresses CO concentrations. As part of the SCAQMD *CO Hotspot Analysis*, the Wilshire

Boulevard/Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. The project considered herein would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's *CO Hotspot Analysis*. As the CO hotspots were not experienced at the Wilshire Boulevard/Veteran Avenue intersection even as it accommodates 100,000 vehicles daily, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 956 additional total daily vehicle trips (-6 net a.m. peak hour and 52 net p.m. peak hour trips) attributable to the project, when compared to the existing condition. Therefore, impacts would be less than significant.

Construction-Related Diesel Particulate Matter

Construction would result in the generation of diesel particulate matter (DPM) emissions from the use of off-road diesel equipment required. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e. potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current models and methodologies for conducting health risk assessments are associated with longer-term exposure periods of 9, 30, and 70 years, which do not correlate well with the temporary and highly variable nature of construction activities. The closest sensitive receptors are located approximately 1,600 feet from the property boundary and the associated project construction areas.

California Office of Environmental Health Hazard Assessment has not identified short-term health effects from DPM. Construction is temporary and would be transient throughout the site (i.e. move from location to location) and would not generate emissions in a fixed location for extended periods of time. Construction would be subject to and would comply with California regulations limiting the idling of heavy-duty construction equipment to no more than 5 minutes to further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. For these reasons, DPM generated by construction activities, in and of itself, would not be expected to expose sensitive receptors to substantial amounts of air toxics and the project would have a less than significant impact.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

No Impact. The SCAQMD *CEQA Air Quality Handbook* identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The project would not include any of the land uses that have been identified by the SCAQMD as odor sources.

During construction-related activities, some odors (not substantial pollutant concentrations) that may be detected are those typical of construction vehicles (e.g., diesel exhaust from grading and construction equipment). These odors are a temporary short-term impact that is typical of construction projects and would disperse rapidly. The project would not include any of the land uses that have been identified by the SCAQMD as odor sources. Therefore, the project would not create objectionable odors.

Cumulative Impacts

As discussed above, project-related impacts to air quality would be less than significant. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. The SCAQMD developed the operational thresholds of significance based on the level above which a project's individual emissions would result in a cumulatively considerable contribution to the Basin's existing air quality conditions. Therefore, a project that exceeds the SCAQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact. As described in this section, the proposed Project's operational emissions would not exceed thresholds. Therefore, the proposed Project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts.

BIOLOGICAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?				X
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?				X
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				X
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. The proposed project would not have an effect, either directly or through habitat modifications, on any species identified as a candidate, as a sensitive, or as a special-status species in local or regional plans, policies, or regulations, or by the California

Department of Fish and Wildlife (CDFW) or United States Fish and Wildlife Service (USFWS). The project site consists of two existing industrial/office buildings, ancillary auto parking lot, and landscaping. There is limited vegetation on the project site consisting of landscaped ornamental vegetation found on the perimeter of the project site and along the parking aisles. No natural habitats exist on-site. The project site no longer contains suitable habitat for any protected species. Therefore, there would be no impact to sensitive species. No mitigation is required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

No Impact. The project site is developed with two industrial/office buildings and is surrounded on all sides by existing commercial and industrial properties. There are no native habitats on site. Additionally, no drainages, riparian habitat, or aquatic features are located on the project site. No impacts to riparian habitat or other sensitive natural community would occur as a result of the proposed project; no mitigation is required.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Refer to Threshold 4.4 (b) above. No drainages, jurisdictional water, or wetlands occur on site. No impact would occur.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. The project site is located in a predominately industrial and commercial area and is not suitable as a wildlife movement corridor. Construction of the proposed project would not impact a wildlife corridor.

Nesting birds and their nests are protected under the provisions of the Migratory Bird Treaty Act (MBTA) and CDFW codes. As described above in Threshold 4.4 (a), the site does not provide any natural habitats; however, there is landscaped ornamental vegetation that occurs on the perimeter on the project site. Landscaped vegetation could provide suitable habitat for birds protected by the MBTA. As described in PDF BIO-A (see section 2.2, Project Design Features section), a qualified biologist would conduct a pre-construction nesting bird survey prior to any ground disturbing activities or the removal of vegetation on the site during the nesting period (February 1st to August 31st). Therefore, there would be no impact to migratory wildlife or corridors and no mitigation is required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The proposed project would not conflict with any local policies or ordinances protecting biological resources, as the project site has been developed and there are no identified biological resources that are subject to such regulation; no impact would occur and no mitigation is required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The project site is not subject to a conservation plan since it is a developed site with no biological resources subject to regulation. No impact relative to adopted habitat conservation or other approved local, regional or State plans would occur.

Cumulative Impacts

The analysis above determined that the implementation of the proposed project would not result in significant impacts to biological resources. Similar to the proposed project, all cumulative projects would be subject to individual project review and conformance with conservation plans and standard provisions for compliance with state and federal protection laws. Since potential cumulative projects would also be required to mitigate for any potential impacts to biological resources, the cumulative impact from other past, present, and reasonably foreseeable projects, would be expected to be less than significant. Therefore, cumulative impacts would be less than significant and the potential incremental effects of the proposed project would not be cumulatively considerable.

CULTURAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?				X
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?			X	
c) Disturb any human remains, including those interred outside of dedicated cemeteries?			X	

The discussion below relies on the City's General Plan as it relates to the cultural resources and the project site and a California Historical Resources Information System (CHRIS) Summary Memo conducted by ASM Affiliates (ASM) in April 2022 (**Appendix B**).

a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

No Impact. The project site consists of two existing industrial/office buildings, and associated surface parking lots and landscaping. According to the City's General Plan, the project is not located in the Cultural Resources Overlay District. In addition, the existing structures, as described in Section 4.9, *Hazards and Hazardous Materials*, were constructed in or shortly before 1979 and 1980, were not identified as historic structures through inventories of historic buildings completed by the City in 1990 and 2003.[8] In addition, ASM Affiliates, Inc. (ASM) requested a search of existing records held by the South-Central Coastal Information Center (SCCIC), part of the California Historical Resources Information System (CHRIS), which encompassed the project area and a radius of 1 mile around it. Historic aerial photographs and historic USGS topographic maps of the project area were analyzed. A request was also made for a search of the Native American Heritage Commission's (NAHC) Sacred Lands File. The SCCIC records search was conducted to determine whether the project area has been previously subject to survey as well as to detect the presence or absence of cultural resources previously documented within the project area. The search included all records and documents on file with the SCCIC, as well as the National Register of Historic Places, the Office of Historic Preservation (OHP) Historic Property Directory, and the OHP Archaeological Determinations of Eligibility list.

A total of 56 previous reports were identified as a result of the records search (See Table 1 in **Appendix B**). Six of these encompassed all or a portion of the project area, with one

8 City of Tustin. (2018). City of Tustin General Plan, Open Space and Recreation Element. Page 36. Retrieved from https://tustinca.org/396/General-Plan. Accessed April 18, 2022.

located just outside of the proposed project parcel. Three of the six reports are large-scale overviews that do not address the project location specifically. As documented in report OR-01413, a portion of this project was included in a survey of a small parcel just to the southwest of the proposed project; this report had negative results and concluded that the area had a low prehistoric sensitivity. A small area within the proposed project parcel was documented in OR-01662, while OR-04000 included a linear component adjacent to the eastern edge of the parcel; no resources were documented by either project within or near the project parcel.

Historical topographic maps provide minimal additional information regarding the use of the project area over time. Michelle Drive appears on early topographic maps dating from 1896 with other roads not appearing in the area until 1932. No significant change is evident again until 1982 when Myford Road appears as well as a variety of structures throughout the area. Similarly, historical aerial images show the project area largely undeveloped until the 1980 image, which shows roads and structures as depicted on the topographic map, with minimal change to the most recent image taken in 2018.

Review of the results of the SCCIC records search and historical imagery indicate that the project location does not contain any nor has it contained any known historical properties as defined by CEQA. The results of prior studies encompassing and adjacent to the project site suggest that the area overall has a low potential for containing previously undocumented archaeological or historical resources. Thus, no impact would occur to historical resources and mitigation is not required.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Less Than Significant Impact. The project site has been previously disturbed and the surrounding area is predominately urbanized with industrial uses. According to Figure COSR-2 in the City's General Plan, the project site is not located within a known archaeological area. Due to the level of past disturbance, it is not anticipated that archaeological sites would be found. Because the proposed project involves development of a site that has been so heavily disturbed, it is not anticipated that intact subsurface archaeological resources would be encountered during excavation and grading activities. Potential impacts are considered less than significant and no mitigation is required.

c) Disturb any human remains, including those interred outsides of dedicated cemeteries?

Less Than Significant Impact. The project site is not located within a known or suspected cemetery and there are no known human remains within the project site. However, this does not preclude finding human remains during project-related ground disturbance. In compliance with State regulations, should any human remains be encountered during construction activities, State Health and Safety Code Section 7050.5 states that no further disturbances shall occur in the immediate area until the County Coroner has made the

necessary findings as to origin and disposition pursuant to California Public Resources Code Section 5097.98. In addition, in accordance with State and local guidelines, if the Coroner determines the remains to be of a Native American, the Coroner shall contact the Native American Heritage Commission within 24 hours for identification of the most likely descendent of the deceased Native American. Additionally, if the remains are determined to be Native American, the City would work with local Native American representatives to ensure that the remains and any associated artifacts are treated in a respectful and dignified manner. Despite the applicable regulatory framework and the relatively low likelihood of discovery, it remains possible that the proposed project would discover human remains during subsurface activities, which could then result in the remains being inadvertently damaged. Project compliance with State Health and Safety Code Section 7050.5 would reduce this potentially significant impact to a less than significant level.

Cumulative Impacts

The proposed project would result in less than significant impacts to historical, known archaeological resources, or known human remains. The chances of cumulative impacts occurring as a result of project implementation plus implementation of other projects in the region are not likely since other proposed projects would be subject to individual project-level environmental review. Since there would be no project-related significant impacts and due to existing laws and regulations in place to protect cultural resources and prevent significant impacts to archaeological resources, or known human remains, the potential incremental effects of the proposed project would not be cumulatively considerable.

ENERGY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				X

Building Energy Conservation Standards

Energy conservation standards for new residential and nonresidential buildings were adopted by the California Energy Resources Conservation and Development Commission (now the California Energy Commission [CEC]) in June 1977 and are updated every three years (Title 24, Part 6, of the CCR). Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow for consideration and possible incorporation of new energy efficiency technologies and methods. On August 11, 2021, the CEC adopted the 2022 Building Energy Efficiency Standards, which took effect on January 1, 2023.

The 2022 Building Energy Efficiency Standards contain energy and water efficiency requirements (and indoor air quality requirements) for newly constructed buildings, additions to existing buildings, and alterations to existing buildings. Public Resources Code Sections 25402 subdivisions (a)-(b) and 25402.1 emphasize the importance of building design and construction flexibility by requiring the CEC to establish performance standards, in the form of an "energy budget" in terms of the energy consumption per square foot of floor space. For this reason, the 2022 Building Energy Efficiency Standards include both a prescriptive option, allowing builders to comply by using methods known to be efficient, and a performance option, allowing builders complete freedom in their designs provided the building achieves the same overall efficiency as an equivalent building using the prescriptive option.[9]

The 2022 Building Energy Efficiency Standards build on California's technology innovations, encouraging energy efficient approaches to encourage building decarbonization. The 2022 Building Energy Efficiency Standards also extend the benefits of photovoltaic and battery storage systems and other demand flexible technology to work in combinations with heat pumps to

[9] California Energy Commission. (2022). 2022 Building Energy Efficiency Standards for Residential and non-residential standards. Page iv. Retrieved from https://www.energy.ca.gov/sites/default/files/2022-12/CEC-400-2022-010_CMF.pdf. Accessed February 7, 2023.

enable California buildings to be responsive to climate change. The 2022 Building Energy Efficiency Standards also strengthen ventilation standards to improve indoor air quality.

Senate Bill 350

SB 350 was signed into law in September 2015 and establishes tiered increases to the Renewable Portfolio Standard—40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. SB 100 was signed into law September 2018 and increased the required Renewable Portfolio Standards.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100. Under SB 100, the total kilowatt-hours of energy sold by electricity retailers to their end-use customers must consist of at least 50 percent renewable resources by 2026, 60 percent renewable resources by 2030, and 100 percent renewable resources by 2045. SB 100 also establishes a State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

State CEQA Guidelines Appendix F

Pursuant to Section 15126.2(b), Section 15126.4 (a)(1)(C), and Appendix F of the State CEQA Guidelines, the environmental setting may include "existing energy supplies and energy use patterns in the region and locality." Energy use is analyzed in this document due to the potential direct and indirect environmental impacts associated with the project. Such impacts include the depletion of nonrenewable resources (e.g., oil, natural gas, coal, etc.) and emissions of pollutants during both project construction and operations. Refer to Greenhouse Gas Emissions, **Appendix D**, for additional regulatory background and environmental setting regarding the project's energy use.

Electricity

Electricity as a utility is a man-made resource. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity involves a number of system components including substations and transformers that lower transmission line power (voltage) to a level appropriate for on-site distribution and use. The electricity generated is distributed through a network of transmission and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands.

Energy capacity, or electrical power, is generally measured in watts (W) while energy use is measured in watt-hours (Wh). For example, if a light bulb has a capacity rating of 100 W, the energy required to keep the bulb on for one hour would be 100 Wh. If ten 100 W bulbs were on

for one hour, the energy required would be 1,000 Wh or one kilowatt-hour (kWh). On a utility scale, a generator's capacity is typically rated in megawatts (mw), which is one million watts, while energy use is measured in megawatt-hours (MWh) or gigawatt-hours (GWh), which is one billion watt-hours.

Natural Gas

The Southern California Gas Company (SoCalGas), the service provider for the project, services approximately 21 million people in a 20,000-square mile service territory. SoCalGas has four storage fields; Aliso Canyon, Honor Rancho, La Goleta, and Playa del Rey, as well as a combined storage capacity of 134.1 billion cubic feet. According to the CEC, natural gas demand in the SoCalGas service area was 7,431 million therms (or 743,100 million cubic feet) in 2010. The CEC prepared three scenarios for forecasting future growth in natural gas demand between 2012 and 2022: a high-energy demand case, a low-energy demand case, and a mid-energy demand case. The low-demand scenario, which incorporates relatively high economic/demographic growth, relatively low electricity and natural gas rates, and relatively low-efficiency program and self-generation impacts, estimates that natural gas demand in the SoCalGas service area would be 7,951 million therms in 2022 (the latest year in the demand forecast).

Natural gas provides almost a third of California's total energy requirements and will continue to be a major fuel in California's energy supply. Only 13.5 percent of the natural gas California used came from in-State production in 2006; the rest was delivered by pipelines from several production areas in the western United States and western Canada. Once the gas arrives in California, it is distributed by the State's three major gas utilities that provide a collective of 98 percent of the State's natural gas.

Energy Use

Energy use is typically quantified using the British Thermal Unit (BTU). Total energy use in California was 7,816.9 trillion BTU in 2019 (the most recent year for which this specific data is available), which equates to an average of approximately 198 million BTU per capita. Of California's total energy use, the breakdown by sector is 39.3 percent transportation, 23.2 percent industrial, 18.8 percent commercial, and 18.7 percent residential.[10] Electricity and natural gas in California are generally used by stationary sources such as residences, commercial sites, and industrial facilities, whereas petroleum use is generally accounted for by transportation-related energy use.

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact.

[10] United States Energy Information Administration. (2022). California State Profile and Energy Estimates. Retrieved from www.eia.gov/state/?sid=CA. Accessed April 27, 2022.

Electricity

SCE provides electricity to the project area. Currently, the existing site uses electricity to operate the existing combined total of 136,098 square feet of industrial/office buildings. Development of the project may result in an increase in electricity over existing conditions. The increased demand is expected to be adequately served by the existing SCE electrical facilities. Total electricity demand in SCE's service area is forecast to increase by approximately 12,000 GWh—or 12 billion kWh—between 2015 and 2026. The increase in electricity demand from the project would represent a small percentage increase compared to overall demand in SCE's service area. Therefore, projected electrical demand would not significantly impact SCE's level of service.

It should also be noted that the project design and materials would comply with the 2022 Building Energy Efficiency Standards, which took effect on January 1, 2023. Prior to issuance of a building permit, the City of Tustin Building Division would review and verify that the project plans demonstrate compliance with the current version of the Building and Energy Efficiency Standards. The project would also be required to adhere to the provisions of CALGreen, which establishes planning and design standards for sustainable site development, energy efficiency (in excess of the CEC requirements), water conservation, material conservation, and internal air contaminants.

Project development would not interfere with achievement of the 60 percent Renewable Portfolio Standard set forth in SB 100 for 2030 or the 100 percent standard for 2045. These goals apply to SCE and other electricity retailers. As electricity retailers reach these goals, emissions from end-user electricity use would decrease from current emission estimates.

Natural Gas

SoCalGas provides natural gas service to the project area. The increased demand is expected to be adequately served by the existing SoCalGas facilities. From 2018 to 2035, residential demand is expected to decline from 236 billion cubic feet (bcf) to 186 bcf, while supplies remain constant at 3.775 billion cubic feet per day (bcfd) from 2015 through 2035. Therefore, the natural gas demand from the proposed project would represent a nominal percentage of overall demand in SoCalGas' service area. The proposed project would not result in a significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

Fuel

During construction, transportation energy use depends on the type and number of trips, vehicle miles traveled, fuel efficiency of vehicles, and travel mode. Transportation energy use during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. The use of energy resources by these vehicles would fluctuate according to the phase of construction and would be temporary. Most

construction equipment would be gas-powered, diesel-powered, or electricity powered. Impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure; impacts would not be significant.

During operations, energy consumption would be associated with facilities operations, visitor, and employee vehicle trips; delivery and supply trucks; and trips by maintenance and repair crews. The project is a warehouse distribution development project near the I-5 freeway, SR 261, and SR 55, reducing the need to drive long distances to a major highway. Consequently, the proposed project would not result in a substantial demand for energy that would require expanded supplies or the construction of other infrastructure or expansion of existing facilities. Additionally, fuel consumption associated with vehicle trips generated by the proposed project would not be considered inefficient, wasteful, or unnecessary.

The proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Impacts are less than significant, and no mitigation is required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

No Impact. As discussed in Section 4.8, *Greenhouse Gas Emissions*, threshold (b), the proposed project would be consistent with the SCAG 2016-2040 Regional Transportation Plan/ Sustainable Communities Strategy (RTP/SCS) and the CARB Scoping Plan. Project design and operation would comply with the California Building Energy Efficiency Standards, appliance efficiency regulations, and green building standards. Project development would not cause inefficient, wasteful and unnecessary energy consumption, and no adverse impact would occur.

The project is a warehouse distribution development and would generate GHG emissions below SCAQMD post-2020 thresholds (the proposed project generates 373 million metric tons of CO_2 equivalent per year [$MTCO_2e/yr$]). The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce GHG emissions, including Title 24, AB 32, and SB 32; therefore, the project is consistent with AB 32, which aims to decrease emissions statewide to 1990 levels by 2020. Potential impacts are considered less than significant.

Cumulative Impacts

Construction and operations associated with implementation of the project would result in the consumption of fuel and energy, but it would not do so in a wasteful manner. The consumption of fuel and energy would not be substantial in comparison to statewide electricity, natural gas, gasoline, and diesel demand. New capacity or supplies of energy resources would not be

required. Additionally, the project would be subject to compliance with all Federal, State, and local requirements for energy efficiency.

The anticipated impacts from the proposed project, in conjunction with future development in the site vicinity, would increase urbanization and result in increased energy consumption. However, potential land use impacts are site-specific and require evaluation on a case-by-case basis. Each cumulative project would require separate discretionary approval and CEQA assessment, which would address potential energy consumption impacts and identify necessary mitigation measures, where appropriate.

As noted above, the proposed project would not result in significant energy consumption impacts. The proposed project would not be considered inefficient, wasteful, or unnecessary with regard to energy. Thus, the proposed Project would not result in incremental effects to energy that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. As a result, no cumulative significant impacts related to energy would occur. Therefore, potential impacts are not expected to be cumulatively considerable and impacts would be less than significant.

GEOLOGY AND SOILS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
7. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?			X	

A Geotechnical Investigation was prepared for the proposed project by Geotechnical Professionals Inc. (February 2022). The report is provided in **Appendix C**; the results and conclusions of the report are summarized herein.

California Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (AP Act) was signed into law in 1972 with its primary purpose being to mitigate the hazard of fault rupture by prohibiting the location of structures for human occupancy across the trace of an active fault. The AP Act requires the State Geologist to delineate "Earthquake Fault Zones" along faults that are "sufficiently active" and "well defined." The AP Act dictates that cities and counties withhold development permits for projects within an Earthquake Fault Zone within their jurisdiction until geologic investigations demonstrate that the projects are not threatened by surface displacements from future earthquakes. Projects include all land divisions and most structures for human occupancy. State law exempts single-family wood-frame and steel-frame dwellings that are less than three stories and are not part of a development of four units or more. However, local agencies can be more restrictive than the State.

Ground Shaking

Ground shaking is a general term referring to all aspects of motion of the earth's surface resulting from an earthquake and is normally the major cause of damage in seismic events. The extent of ground shaking is controlled by the magnitude and intensity of the earthquake, distance from the epicenter, and local geologic conditions. Magnitude is a measure of the energy released by an earthquake; it is assessed by seismographs. Intensity is a subjective measure of the perceptible effects of seismic energy at a given point and varies with distance from the epicenter and local geologic conditions.

Ground shaking is the primary cause of damage and injury during earthquakes and can result in surface rupture, liquefaction, landslides, lateral spreading, differential settlement, tsunamis, building failure, and broken gas and other utility lines, leading to fire and other collateral damage. The intensity and severity of ground motion is dependent on the earthquake's magnitude, distance from the epicenter and underlying soil and rock properties. Areas underlain by thick, saturated, unconsolidated soils will experience greater shaking motion than areas underlain by firm bedrock.

Seismicity and Seismic Hazards

The faulting and seismicity of southern California is dominated by the San Andreas Fault zone. The zone separates two of the major tectonic plates that comprise the earth's crust. The Pacific Plate lies west of the fault zone. This plate is moving in a northwesterly direction relative to the North American Plate, which lies east of the fault zone. This relative movement between the two plates is the driving force of fault ruptures in western California. There are numerous faults in southern California that are categorized as active, potentially active, and inactive.

A fault is classified as active by the state if it has either moved during the Holocene epoch (during the last 11,000 years) or is included in an Alquist-Priolo Earthquake Fault zone (as established by the California Geological Survey [CGS]). A fault is classified as potentially active if it has experienced movement within the Quaternary period (during the last 1.6 million years). Faults that have not moved in the last 1.6 million years generally are considered inactive.

The severity of an earthquake generally is expressed in two ways—magnitude and intensity. The energy released, as measured on the Moment Magnitude (MM) scale, represents the magnitude of an earthquake. The intensity of an earthquake is measured by the Modified Mercalli Intensity (MMI) scale, which emphasizes the seismic response at a subject site and measures ground-shaking severity according to damage done to structures, changes in the earth surface, and personal accounts.

Earthquake Induced Liquefaction

Liquefaction is the sudden loss of soil shear strength and sudden increase in porewater pressure caused by shear strains, as could result from an earthquake. Research has shown that saturated, loose to medium-dense sands with a silt content less than about 25 percent and located within the top 40 feet are most susceptible to liquefaction and surface rupture/lateral spreading. These zones delineate regional susceptibility and can vary greatly due to groundwater level changes.

Landslides

Shaking during an earthquake may lead to seismically induced landslides, especially in areas that have previously experienced landslides or slumps, in areas of steep slopes, or in saturated hillsides. The City is generally flat and not at risk from the threat of landslides. Potential areas where seismically induced landslides could occur in the north portion of the City.

Surface Fault Rupture Potential

Rupture of the surface during an earthquake generally is limited to the narrow strip of land immediately adjacent to the fault on which the earthquake is occurring. Surface fault rupture may occur suddenly during an earthquake or slowly in the form of fault creep and almost always follows pre-existing faults, which are zones of weakness. Secondary surface faulting can be triggered by aquifer compaction and subsidence or by the effects of strong groundshaking triggering an effect on neighboring faults. Not all earthquakes will result in surface rupture and the Alquist-Priolo Earthquake Fault Zone Act initiated a statewide program to identify fault zones that are susceptible to surface rupture.

Soil Erosion

Erosion refers to the removal of soil from exposed bedrock surfaces by water or wind. The effects of erosion are intensified with an increase in slope (as water moves faster, it gains momentum to carry more debris), the narrowing of runoff channels (which increases the velocity of water), and by the removal of groundcover (which leaves the soil exposed to erosive forces). Surface

improvements, such as paved roads and buildings, decrease the potential for erosion on-site, but can increase the rate and volume of runoff, potentially causing off-site erosion.

Subsidence

Soil subsidence at the land surface can result from both natural and man-made phenomena. Natural phenomena that may induce subsidence include tectonic deformation and seismically induced settlements (liquefaction); soil consolidation; oxidation or dewatering of organic-rich soils; and collapse of subsurface cavities. Human activities that may help induce subsidence include decreases in pore pressure caused by the excessive withdrawal of subsurface fluids (pumping), including water and hydrocarbons.

Soil Settlement

Soil settlement is the condition where soil deforms in a vertical direction when a vertical load is placed on top of it. The compression of the soil bed by the vertical load results from the characteristics of the soil particles that are contained in the soil bed, as the spaces that are filled with either air or water between the soil particles are squeezed out.

Expansive Soils

Expansive soils are common throughout California and can cause damage to foundations and slabs, separation of masonry, or failure of paved surfaces unless properly treated during construction. Expansive soil conditions could cause damage to facility components if they are not designed with proper engineering and grading practices. The hazard for expansive behavior is considered a low risk for alluvial fan locations because soils in these areas are frequently saturated and generally do not contain clay-sized particles.

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. The nearest Alquist-Priolo fault zone is the San Joaquin Hills Fault approximately 2.25 miles southwest of the project site.[11] Based on the Geotechnical Investigation, the proposed project site is not located within an Alquist-Priolo Special Studies Zone and there are no known faults crossing or projecting toward the project site. Therefore, ground rupture due to faulting is considered unlikely at this project site. The possibility of significant fault rupture on the project site is considered to be less than significant and no mitigation is required.

[11] United States Geological Survey. *Quaternary Faults.* Retrieved from https://earthquake.usgs.gov/education/geologicmaps/qfaults.php. Accessed August 3, 2022.

ii) Strong seismic ground shaking?

Less Than Significant Impact. Refer to Threshold 4.7 (a-i), above. Due to the strong natural seismic activity of southern California, all structures, including the proposed project, are and would be exposed to potential strong seismic ground shaking through their lifespan. However, design and construction conformance with the latest California Building Code (CBC) would minimize the potential of strong seismic ground shaking impacts. The CBC was adopted by all municipalities within southern California on January 1, 2017. The CBC provides procedures for earthquake-resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure, including the structural system and height. With conformance to the CBC, a less than significant impact from ground shaking would occur.

iii, and iv) Seismic-related ground failure, including liquefaction? And Landslides?

Less Than Significant Impact. Liquefaction is a phenomenon in which saturated cohesionless soils undergo a temporary loss of strength during severe ground shaking and acquire a degree of mobility sufficient to permit ground deformation. In extreme cases, the soil particles can become suspended in groundwater, resulting in the soil deposit becoming mobile and fluid-like. Liquefaction is generally considered to occur primarily in loose to medium dense deposits of saturated sandy soils. Thus, three conditions are required for liquefaction to occur: (1) a sandy soil of loose to medium density; (2) saturated conditions; and (3) rapid, large strain, cyclic loading, normally provided by earthquake motions.

According to the Geotechnical Investigation prepared for the project, the project site is located within an area mapped by the State of California as having a potential for soil liquefaction. Groundwater was encountered at depths of 11 to 20 feet during the geotechnical investigation for the project site. Historical groundwater levels at the project site are estimated to be approximately 12 to 13 feet below the ground surface at the project site.

The potential for liquefaction was evaluated in the Geotechnical Investigation. The materials encountered below the shallow groundwater depth of 11 feet consisted primarily of firm to very stiff clays with minor layers of medium dense to dense sands and silty sands. Based on the evaluation, the total and differential (across a 60-foot span) liquefaction-induced settlement is anticipated to be less than ¼-inch. As such, the potential for soil liquefaction and the resulting settlement to adversely affect the proposed project is considered to be low. Therefore, impacts from liquefaction are considered less than significant.

Landslides are mass movements of the ground that include rock falls, relatively shallow slumping and sliding of soil, and deeper rotational or transitional movement of soil or rock. The project site consists of developed land. According to the City's General Plan Figure

COSR-1, *Hazard Planning Areas*, the project site is not located within an area susceptible to landslides.[12] Therefore, there would be no impact from landslides on the proposed project and no mitigation is required.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact.

Short-term Construction Impacts

Grading during the construction phase of the proposed project would displace soils and temporarily increase the potential for soils to be subject to wind and water erosion. However, erosion and loss of topsoil would be controlled using standard erosion control practices during construction. Accordingly, the proposed project would be required to prepare a Stormwater Pollution Prevention Plan (SWPPP) under the National Pollutant Discharge Elimination System (NPDES) General Construction Permit to implement Best Management Practices (BMPs) to minimize stormwater runoff during construction. Adherence to the SWPPP with the recommendations of the Preliminary Water Quality Management Plan prepared for the proposed project would reduce possible impacts related to the erosion to less than significant. No mitigation is required.

Long-term Operational Impacts

Following construction of the project, ground surfaces would be covered by the proposed warehouse distribution building, landscape and paving. Runoff from the northwesterly portion of the building and the truck loading dock area would drain to catch basins located in the truck loading dock. A proposed storm drain would convey runoff around the building and connect to the existing 18" lateral line located at the westerly property line. Flows from the southeasterly half of the building would be collected by a catch basin near the south driveway. A proposed storm drain would convey runoff westerly to the southwest corner of the project site. This would confluence with the runoff from the southwesterly portion prior to connecting to a second existing lateral. Before the on-site flows discharge off-site, manhole structures would divert low flows to a Bio Clean Modular Wetlands System for stormwater treatment.[13] Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant.

c, d) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? And be located on expansive soil, as defined in Table

[12] City of Tustin. (2022). City of Tustin General Plan, Figure COSR-1. Retrieved from https://tustinca.org/396/General-Plan Accessed March 4, 2022.
[13] Thienes Engineering, Inc. (2022). Preliminary Water Quality Management Plan.

18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. The City's General Plan Safety Element Figure COSR-1, *Hazard Planning Areas*, in the City's General Plan Safety Element depicts areas in the City which require special planning considerations to avoid potential geologic hazards. The project site is not located in an area identified as either having high liquefaction potential or probable bedrock landslides. The Geotechnical Investigation for the proposed project site found impacts due to liquefaction to be less than significant. There would be no impacts from landslides because the proposed project site is flat and is not located near any areas with steep topography that would be susceptible to landslides.

However, the proposed project consists of soils that are made up of highly expansive clays. As described in PDF GEO-A, the project shall incorporate recommendations included in the Geotechnical Investigation prepared for the project by Geotechnical Professionals Inc. (February 2022) into design and construction of the project site. Compliance with the recommendations of the geotechnical investigation would reduce impacts associated with consolidation and collapse to less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. No septic tanks would be used as part of the proposed project. The project would connect to the City's existing sanitary sewer system for wastewater disposal. Thus, no impacts associated with the use of septic tanks would occur as part of the proposed project's implementation and no mitigation is required.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?

Less Than Significant Impact. The Geotechnical Investigation prepared for the project does not identify the presence of any unique geological features on the project site. Furthermore, the City's General Plan does not identify any unique geological features within the City. Thus, the proposed project would not directly or indirectly destroy a unique geological feature. Figure COSR-2, *Important Natural Resources*, in the City's General Plan Conservation/Open Space/Recreation Element does not identify the project site in an area of high paleontologic sensitivity. Therefore, impacts related to unique paleontological resources or unique geological features is considered less than significant.

Cumulative Impacts

The potential cumulative impact related to earth and geology is typically site specific. The analysis herein determined that the proposed project would not result in any significant impacts related to landform modification, grading, or the destruction of a geologically significant landform or feature. Moreover, existing State and local laws and regulations are in place to protect people and property from substantial adverse geological and soils effects, including fault rupture, strong

seismic ground shaking, seismic-induced ground failure (including liquefaction), and landslides. Existing laws and regulations also protect people and property from adverse effects related to soil erosion, expansive soils, loss of topsoil, development on an unstable geologic unit or soil type that could result in on- or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse. These existing laws and regulations, along with project design features, would render potentially adverse geological and soil effects of the proposed project to a level considered less than significant. Further, these existing laws and regulations also ensure that past, present, and reasonably foreseeable future projects in the City of Tustin and surrounding region do not result in substantial adverse geological and soils effects. As a result, the existing legal and regulatory framework would ensure that the incremental geological and soils effects of the proposed project would not result in greater adverse cumulative effects when considered together with the effects of other past, present, and reasonably foreseeable future projects in the region. The impacts of the proposed project-related to geology and soils would be less than cumulatively considerable.

GREENHOUSE GAS EMISSIONS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	

The following analysis is based on the Greenhouse Gas Emissions Assessment prepared by Kimley-Horn and Associates dated May 2022 and included as **Appendix D**.

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact.

Short-Term Construction Greenhouse Gas Emissions

The project would result in direct emissions of GHGs from construction. The approximate quantity of daily GHG emissions generated by construction equipment utilized to build the project is depicted in **Table 10: Construction-Related Greenhouse Gas Emissions**.

Table 10: Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$
Construction	469
30-Year Amortized Construction	16
Source: CalEEMod version 2020.4.0. Refer to **Appendix D** for model outputs.	

As shown, the project would result in the generation of approximately 469 $MTCO_2e$ over the course of construction. Construction GHG emissions are typically summed and amortized over the lifetime of the project (assumed to be 30 years), then added to the operational emissions[14]. The amortized project construction emissions would be 16 $MTCO_2e$ per year. Once construction is complete, the generation of these GHG emissions would cease.

Long-Term Operational Greenhouse Gas Emissions

Operational or long-term emissions occur over the life of the project. GHG emissions would result from direct emissions such as project generated vehicular traffic, on-site combustion

[14] The project lifetime is based on the standard 30-year assumption of the South Coast Air Quality Management District (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13,* August 26, 2009).

of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the project, the emissions associated with solid waste generated from the project, and any fugitive refrigerants from air conditioning or refrigerators.

Total GHG emissions associated with the project are summarized in **Table 11: Project Greenhouse Gas Emissions**. The project is a speculative warehouse, and the modeled emissions are based on the conservative assumption that the project would be occupied by a High-Cube Fulfillment Center Warehouse (ITE code 155), which has the highest trip generation rate among likely potential users for the site. Per the project Trip Generation and Vehicle Miles Traveled (VMT) Memorandum (see **Appendix H**), using the High-Cube Fulfillment Center Warehouse trip generation rate, the project would generate 956 total daily vehicle trips (129 a.m. peak hour and 178 p.m. peak hour trips), and approximately 28 of those trips would be attributable to trucks. However, the two (2) existing buildings currently generate approximately 1,066 total daily vehicle trips (139 a.m. peak hour and 132 p.m. peak hour), and approximately 18 of those trips would be attributable to trucks. Therefore, the proposed project would result in a net reduction of 110 total daily vehicle trips (-10 net a.m. peak hour and 46 net p.m. peak hour), and approximately 10 of those net daily trips would be attributable to trucks. As shown in **Table 11**, using conservative trip generation assumptions, the Project would potentially generate a net of approximately 373 $MTCO_2e$ annually from both construction and operations and the project-related GHG emissions would not exceed the SCAQMD's 10,000 $MTCO_2e$ per year threshold. Therefore, impacts would be less than significant.

Table 11: Project Greenhouse Gas Emissions

Emissions Source	$MTCO_2e$ per Year
Existing Conditions	1,755
Proposed Project	
Construction Amortized Over 30 Years	16
Area Source	<0.01
Energy	159
Mobile	1,360
Off-Road – Forklifts	124
Off-Road – Yard Trucks	252

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact.

SCAG RTP/SCS Consistency

On September 3, 2020, the SCAG Regional Council adopted Connect SoCal (*2020-2045 Regional Transportation Plan/ Sustainable Communities Strategy* (RTP/SCS). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and Federal Clean Air Act (FCAA) requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore project comparison to the RTP/SCS is an appropriate indicator of whether the project would inhibit the post-2020 GHG reduction goals promulgated by the state. The project's consistency with the RTP/SCS goals is analyzed in detail in **Table 12: Regional Transportation Plan/Sustainable Communities Strategy Consistency**.

Compliance with applicable State standards would ensure consistency with State and regional GHG reduction planning efforts. The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in **Table 12**, the proposed project would be consistent with the stated goals of the RTP/SCS. Therefore, the proposed project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Table 12: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		**Compliance**	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	N/A:	Although this project is not a transportation improvement project, the project is located near an existing transit route~~s~~ on ~~Myford Road,~~ Walnut Avenue and access to I-5.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development are encouraged through the development of alternative transportation methods, green design techniques for buildings, and other energy-reducing techniques. This development project is required to comply with the provisions of the California Building Energy Efficiency Standards and the Green Building Standards Code (CALGreen).
GOAL 6:	Support healthy and equitable communities.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 9:	Encourage development of diverse housing types in areas that are	N/A:	This is not a housing development project and is therefore not applicable. However, the project is located within a

SCAG Goals		Compliance	
	supported by multiple transportation options.		relatively short walking distance to local bus routes.
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	N/A:	This is not a project-specific policy and is therefore not applicable.
Source: Southern California Association of Governments, *Regional Transportation Plan/Sustainable Communities Strategy*, 2020.			

The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in **Table 12** and **Table 13: Project Consistency with Applicable CARB Scoping Plan Measures**, the project would be consistent with the stated goals of the RTP/SCS and the CARB Scoping Plan. Therefore, the project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Consistency with the CARB Scoping Plan

The California State Legislature adopted AB 32 in 2006. AB 32 focuses on reducing GHGs (CO_2, CH_4, NO_X, HFCs, PFCs, and SF_6) to 1990 levels by the year 2020. Pursuant to the requirements in AB 32, CARB adopted the *Climate Change Scoping Plan* (CCSP) in 2008, which outlines actions recommended to obtain that goal. The CCSP provides a range of GHG reduction actions that include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as the cap-and-trade program, and an AB 32 implementation fee to fund the program. As shown in **Table 13: Project Consistency with Applicable CARB Scoping Plan Measures**, the project is consistent with most of the strategies, while others are not applicable to the project.

The 2017 CCSP Update identifies additional GHG reduction measures necessary to achieve the 2030 target. These measures build upon those identified in the first update to the CCSP in 2013. Although a number of these measures are currently established as policies and measures, some measures have not yet been formally proposed or adopted. It is expected that these actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. As such, impacts related to consistency with the Scoping Plan would be less than significant.

Table 13: Project Consistency with Applicable CARB Scoping Plan Measures

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
Transportation	California Cap-and-Trade Program Linked to Western Climate Initiative	Regulation for the California Cap on GHG Emissions and Market-Based Compliance	**Consistent.** The Cap-and-Trade Program applies to large industrial sources such as power plants, refineries, and cement manufacturers. However, the regulation indirectly affects people who use the products

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
		Mechanism October 20, 2015 (CCR 95800)	and services produced by these industrial sources when increased cost of products or services (such as electricity and fuel) are transferred to the consumers. The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects' electricity usage are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and combustion of other fossil fuels not directly covered at large sources in the Program's first compliance period.
	California Light-Duty Vehicle GHG Standards	Pavley I 2005 Regulations to Control GHG Emissions from Motor Vehicles Pavley I 2005 Regulations to Control GHG Emissions from Motor Vehicles	**Consistent**. This measure applies to all new vehicles starting with model year 2012. The project would not conflict with its implementation as it would apply to all new passenger vehicles purchased in California. Passenger vehicles, model year 2012 and later, associated with construction and operation of the project would be required to comply with the Pavley emissions standards.
		2012 LEV III California GHG and Criteria Pollutant Exhaust and Evaporative Emission Standards	**Consistent.** The LEV III amendments provide reductions from new vehicles sold in California between 2017 and 2025. Passenger vehicles associated with the site would comply with LEV III standards.
	Low Carbon Fuel Standard	2009 readopted in 2015. Regulations to Achieve GHG Emission Reductions Subarticle 7. Low Carbon Fuel Standard CCR 95480	**Consistent.** This measure applies to transportation fuels utilized by vehicles in California. The project would not conflict with implementation of this measure. Motor vehicles associated with construction and operation of the project would utilize low carbon transportation fuels as required under this measure.
	Regional Transportation-Related GHG Targets.	SB 375. Cal. PRC § 21155, 21155.1, 21155.2, 21159.28	**Consistent**. The project would provide development in the region that is consistent with the growth projections in the RTP/SCS.
	Goods Movement	Goods Movement Action Plan January 2007	**Not applicable**. The project does not propose any changes to maritime, rail, or intermodal facilities or forms of transportation.
	Medium/Heavy-Duty Vehicle	2010 Amendments to the Truck and Bus Regulation, the Drayage Truck	**Consistent**. This measure applies to medium and heavy-duty vehicles that operate in the state. The project would not conflict with implementation of this measure. Medium and

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
		Regulation and the Tractor-Trailer GHG Regulation	heavy-duty vehicles associated with construction and operation of the project would be required to comply with the requirements of this regulation.
	High-Speed Rail	Funded under SB 862	**Not applicable**. This is a statewide measure that cannot be implemented by a project applicant or Lead Agency.
Electricity and Natural Gas	Energy Efficiency	Title 20 Appliance Efficiency Regulation	**Consistent.** The project would not conflict with implementation of this measure. The project would comply with the latest energy efficiency standards.
		Title 24 Part 6 Energy Efficiency Standards for Residential and Non-Residential Building	
		Title 24 Part 11 California Green Building Code Standards	
	Renewable Portfolio Standard/Renewable Electricity Standard.	2010 Regulation to Implement the Renewable Electricity Standard (33% 2020)	**Consistent**. The project would obtain electricity from the electric utility, SCE. In 2018 SCE obtained 42 percent of its power supply from renewable sources, including large hydroelectric projects. Therefore, the utility would provide power when needed on site that is composed of a greater percentage of renewable sources.
	Million Solar Roofs Program	SB 350 Clean Energy and Pollution Reduction Act of 2015 (50% 2030)	
	Million Solar Roofs Program	Tax Incentive Program	**Consistent.** This measure is to increase solar throughout California, which is being done by various electricity providers and existing solar programs. The program provides incentives that are in place at the time of construction.
Water	Water	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The project would comply with the CalGreen standards, which requires a 20 percent reduction in indoor water use. The project would also comply with the City's Water-Efficient Landscaping Regulations (Article 9, Chapter 7 of the Tustin Municipal Code).
		SBX 7-7—The Water Conservation Act of 2009	
		Model Water Efficient Landscape Ordinance	
Green Buildings	Green Building Strategy	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The State is to increase the use of green building practices. The project would implement required green building strategies through existing regulation that requires the project to comply with various CalGreen requirements. The project includes sustainability design features that support the Green Building Strategy.

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
Industry	Industrial Emissions	2010 CARB Mandatory Reporting Regulation	**Not applicable.** The Mandatory Reporting Regulation requires facilities and entities with more than 10,000 $MTCO_2e$ of combustion and process emissions, all facilities belonging to certain industries, and all electric power entities to submit an annual GHG emissions data report directly to CARB. As shown above, total project GHG emissions would not exceed the 10,000 $MTCO_2e$ threshold. Therefore, this regulation would not apply.
Recycling and Waste Management	Recycling and Waste	Title 24 Part 11 California Green Building Code Standards AB 341 Statewide 75 Percent Diversion Goal	**Consistent.** The project would not conflict with implementation of these measures. The project is required to achieve the recycling mandates via compliance with the CALGreen code. The City has consistently achieved its state recycling mandates.
Forests	Sustainable Forests	Cap and Trade Offset Projects	**Not applicable.** The project is in an area designated for urban uses. No forested lands exist on-site.
High Global Warming Potential	High Global Warming Potential Gases	CARB Refrigerant Management Program CCR 95380	**Consistent**. The regulations are applicable to refrigerants used by large air conditioning systems and large commercial and industrial refrigerators and cold storage system. The project would not conflict with the refrigerant management regulations adopted by CARB, because the proposed project will not include refrigerated warehouse space.
Agriculture	Agriculture	Cap and Trade Offset Projects for Livestock and Rice Cultivation	**Not applicable**. The project site is designated for urban development. No grazing, feedlot, or other agricultural activities that generate manure occur currently exist on-site or are proposed to be implemented by the project.
Source: California Air Resources Board, *California's 2017 Climate Change Scoping Plan*, November 2017 and CARB, *Climate Change Scoping Plan*, December 2008.			

As seen in **Table 12** and **Table 13**, the project would be consistent with all applicable plan goals. In addition, the project would include several sustainable design features that would help reduce GHG emissions. As shown in **Table 11,** with mitigation the project is estimated to emit 2,128 $MTCO_2e$ per year. However, existing operations are currently generating 1,755 $MTCO_2e$/yr. Therefore, operation of the Project would result in a net increase of 373 $MTCO_2e$ /yr, and would be below the threshold of 10,000 $MTCO_2e$/yr. The GHG emissions caused by long-term operation of the project would be less than significant.

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the project would comply

with all applicable measures are enacted that state lawmakers decide would lead to an 80 percent reduction below 1990 levels by 2050.

Cumulative Impacts

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about 1 day), GHGs have much longer atmospheric lifetimes of 1 year to several thousand years that allow them to be dispersed around the globe.

It is generally the case that an individual project of this size and nature is of insufficient magnitude by itself to influence climate change or result in a substantial contribution to the global GHG inventory. GHG impacts are recognized as exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective. The additive effect of project-related GHGs would not result in a reasonably foreseeable cumulatively considerable contribution to global climate change. As noted above, the proposed project would not result in significant greenhouse gas emissions impacts. In addition, the project as well as other cumulative related projects would also be subject to all applicable regulatory requirements, which would further reduce GHG emissions. As shown in **Table 12** and **Table 13,** the project would not conflict with the RTP/SCS applicable CARB Scoping Plan Measures. As a result, the project would not conflict with any GHG reduction plans including the CARB Scoping Plan. Therefore, the project's cumulative contribution of GHG emissions would be less than significant and the project's cumulative GHG impacts would also be less than cumulatively considerable.

HAZARDS AND HAZARDOUS MATERIALS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

Phase I Environmental Site Assessment (ESAs) were prepared by Avocet Environmental, Inc. for the 14351 Myford Road property and the 14321 Myford Road property on April 4, 2022 and April 5, 2022, respectively. A Soil Vapor Assessment was also prepared by Avocet Environmental, Inc. on April 5, 2022 for the entirety of the project site. These reports are summarized below and are provided in **Appendix E** of this document.

a, b) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? And, create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact.

Short-Term Construction Impacts

Demolition of the on-site buildings has the potential to cause airborne asbestos and LBP concentrations that would exceed Federal and State thresholds and may pose an exposure risk for construction workers. Therefore, an Asbestos and Lead Demolition Survey would be conducted and asbestos and LBP building materials would be removed or stabilized prior to demolition as part of PDF HAZ-A identified in Section 2.0, *Description of Proposed Project* above. In compliance with PDF HAZ-A and all applicable Federal, State, and regional regulations regarding asbestos and LBP removal, the potential impact would be less than significant.

During project construction, potentially hazardous materials would be handled on-site. These materials would include gasoline, diesel fuel, lubricants, and other petroleum-based products used to operate and maintain construction equipment. Handling of these potentially hazardous materials would be temporary and would coincide with the short-term construction phase. Although these materials could be stored on-site, storage would be required to comply with the guidelines established by the manufacturer's recommendations. Consistent with federal, state, and local requirements, transport, removal, and disposal of hazardous materials from the project site would be conducted by a permitted and licensed service provider. Any handling, transport, use, or disposal would comply with all applicable federal, state, and local agencies and regulations, including the EPA, the California Department of Toxic Substances Control (DTSC), the California Occupational Safety and Health Administration (Cal/OSHA), Caltrans, the Resource Conservation and Recovery Act, and the Orange County Health Care Agency (the Certified Unified Program Agency for Orange County).

Long-Term Operational Impacts

Once the proposed project is constructed, hazardous materials would be limited to those associated with a warehouse facility. These include cleaners, paints, solvents; and fertilizers and pesticides for site landscaping. Because these materials are used in very limited quantities, they are not considered a hazard to the public. Adherence to federal, State, and local health and safety requirements regarding these substances would preclude potential impacts. No mitigation is required.

Phase I Environmental Site Assessment Findings

14351 Myford Road Phase I Environmental Site Assessment

According to the Phase I ESA, the 14351 Myford Road property and much of the surrounding area was in agricultural use/operation until the early 1970s; however, the

14351 Myford Road lot had been developed with the existing building by 1979. Silicon Systems, Inc. (SSi) is believed to have been the first occupant at 14351 Myford Road, with the ground floor of the building built as office and warehouse space and the second floor built out as office space. By 1982, however, SSi had converted much of the ground floor into a wafer fab facility and had begun manufacturing silicon wafers, with related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers, cooling towers, air scrubbers, a deionized (DI) water system, and aboveground storage tanks for DI water, oxygen, hydrogen, and inert gas storage. SSi also operated underground storage tanks (USTs), most, if not all, in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and acid wastewater neutralization. The two 2,000-gallon solvent waste storage tanks were in a concrete vault outside the northeast corner of the building, and the acid-related USTs were in concrete vaults in the service yard to the northwest of the building. Research conducted for the Phase I ESA indicated that the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-trichloroethane, xylenes, and isopropyl alcohol. SSi emptied the two solvent waste tanks on an as-needed basis using a vacuum truck. The hydrofluoric acid waste was neutralized on-site and discharged to the sanitary sewer system under a tiered "Permit by Rule" permit. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

Avocet personnel, while with previous companies, provided environmental consulting services to SSi and Texas Instruments, its successor in interest. In particular, Avocet personnel installed six groundwater monitoring wells at the project site and conducted periodic groundwater monitoring until 1996, when SSi decided to consolidate its manufacturing capabilities at another location (in Santa Cruz, California), decommission its older manufacturing facilities in Tustin, and restore the building to its original condition. Pursuant to this decision, the USTs and other subsurface infrastructure at the project site were removed in 1996. Avocet personnel conducted confirmation soil matrix sampling in conveyance piping trenches and beneath the USTs and secondary containment vaults to evaluate the impact, if any, of SSi's operations on the subsurface environment. The confirmation soil matrix sampling results did not indicate the presence of significant soil impacts, and a final groundwater monitoring event in 1996 confirmed that groundwater had not been impacted by SSi's operations or decommissioning activities. The groundwater monitoring wells at the project site were subsequently destroyed and the building was converted back to its original use as office space and the building has operated as such since then.

The Phase I ESA identified one recognized environmental condition (REC) for the portion of the project site at 14351 Myford Road as follows:

- **REC 1 (14351 Myford Road) – Possible VOCs in Soil Vapor.** SSi investigated the impact, if any, of its operations on the subsurface environment in the 1980s and 1990s, notably prior to vacating the site in 1996. Although no significant impacts to vadose zone soil or groundwater were identified, the possible presence of volatile organic compounds (VOCs) in soil vapor was not of concern in the 1990s and was not assessed. As such, Avocet considered the possible presence of VOCs in soil vapor, either from SSi's on-site operations and/or via migration from the former Tungsten Carbide Manufacturing (TCM) facility, a REC and recommended a limited soil vapor survey, which was subsequently completed without any significant impacts.

No Controlled RECs (CREC) were identified at the portion of the project site at 14351 Myford Road. However, the Phase I ESA identified two Historical RECs (HREC) at the project site, as follows:

- **HREC 2 (14351 Myford Road) – Former Waste Solvent USTs.** In the past, SSi accumulated solvent waste, primarily water, in two 2,000-gallon USTs in a concrete secondary containment vault outside the northeast corner of the building. Liquid that accumulated in the secondary containment vault was attributed to both leaks from one of the USTs and infiltration of surface water into the vault. The original USTs were replaced in 1988 before ultimately being removed in 1996 as part of decommissioning the SSi facility. Sampling conducted while the USTs were in operation and after their removal indicated that their impact on soil and groundwater had essentially been negligible and would not warrant regulatory agency involvement. As such, the two former vaulted solvent waste USTs are considered an HREC for the subject site.
- **HREC 3 (14351 Myford Road) – Former Acid Neutralization UST.** In the past, SSi neutralized acidic wastewater in a UST located outside the northwestern side of the building. During facility upgrades in 1990, sodium hydroxide solution was reportedly released from the UST into an open excavation. Subsequent soil matrix sampling did not indicate that the release had significantly impacted the subsurface in the vicinity of the UST and there were no significant groundwater quality changes. The leak in the UST was repaired and the UST was eventually removed along with other SSI subsurface infrastructure in 1996. As the available data would not warrant regulatory agency involvement, the former acid wastewater neutralization UST is considered a HREC.

Other Environmental Features

Other Environmental Features (OEFs) are potential environmental features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and developing the site. Based on the subject Phase I

ESA, three OEFs at the portion of the project site at 14351 Myford Road have been identified, sequentially numbered after the REC and HRECs, as follows:

- **OEF 4 (14351 Myford Road) – Pad-Mounted Transformer.** The subject site features a pad-mounted electrical transformer along the northeastern property boundary. The transformer is owned by Southern California Edison, but it is not known whether it contains or has contained polychlorinated biphenyls (PCBs). That said, there were no indications of oil leakage, PCB-containing or otherwise, on the transformer pad or the surrounding asphalt pavement observed during the site reconnaissance.

- **OEF 5 (14351 Myford Road) – Emergency Generators.** Two trailer-mounted emergency generators outside the northwest corner of the building during the walkover survey were observed during the site reconnaissance. The generators, which are assumed to be gasoline- or diesel-powered, appeared to be in good condition, with no visual or olfactory indications of leakage or spills on the surrounding pavement.

- **OEF 6 (14351 Myford Road) – ACMs and LBP.** The project site was developed in or around 1979, before certain restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction occurred. That said, the original building has since been extensively remodeled and certain ACMs were abated when the SSi facility was decommissioned. No obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs were observed during the site reconnaissance; however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

Phase I Environmental Site Assessment Findings

14321 Myford Road Phase I Environmental Site Assessment

According to the Phase I ESA, the 14321 Myford Road property and much of the surrounding area was in agricultural use/operation until the early 1970s; however, the 14321 Myford Road property is believed to have been developed with the existing building in or shortly before 1980. Wespercorp, a manufacturer of computer parts and biomedical and analytical instruments, is believed to have been the first occupant at 14321 Myford Road. Permits indicate Wespercorp operated two vapor spray degreasers with 1,1,1-trichloroethane (1,1,1-TCA), “trichlorotri-fluoroethane” (Freon 113), methylene chloride, or some combination of these three used as the degreasing solvent. However, it is not clear where the two degreasers were located or how long they were used for. It is not clear exactly when, but at some point, SSi, which was later acquired by Texas Instruments, Inc.,

occupied the subject site in support of its wafer fabrication operations next door at the southwest-adjacent property at 14351 Myford Road. Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, permits indicate SSi operated a boiler, a soldering machine, and an oven at 14321 Myford Road; however, some or all of this equipment may actually have been installed at 14351 Myford Road with 14321 Myford Road used as the mailing address.

Woodbridge Glass has occupied the site since 2003 and manufactures aluminum window frames in the rear (northwest) end of the building, with the remainder built out as administrative office space. Woodbridge Glass's operations at the site include cutting and assembling aluminum frames, including welding, for commercial windows, although the glass for the windows is installed at another nearby facility. The workshop features multiple laser cutters, saws, and shearing machines. Potentially hazardous substances used in the manufacturing operations include synthetic cutting oil, small quantities of petroleum-based lubricants for machinery, and small quantities of gasoline and diesel used in equipment such as generators and forklifts. The outdoor portions of the site are paved and are either used for employee parking or for outdoor storage of aluminum bar stock and wooden pallets. Liquid waste is stored inside the building, for the most part with secondary containment, and periodically transported off-site for disposal or to be recycled; none of the liquid waste is treated on-site. The subject site is not known to have featured, nor did Avocet observe, any subsurface infrastructure such as wastewater clarifiers, USTs, or floor drains.

The Phase I ESA identified one REC for the portion of the project site at 14321 Myford Road as follows:

- **REC 1 (14321 Myford Road) – Former Degreasers.** Permits issued SCAQMD in 1980 indicate that Wespercorp, a former occupant, operated two vapor spray degreasers at the site starting in 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents. It is not clear where the two degreasers were located or how long they were used; however, solvent releases from vapor degreasers are common, including via liquid "drag-out" and as heavier-than-air vapors. Based on the likely presence of organic vapors in the subsurface, Avocet considers the former degreasers a REC.

No CRECs or HRECs were identified at the portion of the project site at 14321 Myford Road. However, based on the subject Phase I ESA, two OEFs have been identified, sequentially numbered after the REC as follows:

- **OEF 2 (14321 Myford Road) – Site-Wide POL Use**. Petroleum, oil, and lubricants (POLs) have been used in the workshop since Woodbridge Glass started operating at the site in 2003. The workshop currently features drums and smaller containers

of used and fresh cutting oil and lubricating oil for machinery. Drums and smaller storage containers are stored largely with secondary containment, but Avocet did observe a few containers without secondary containment during the walkover survey. Minor staining was observed during Avocet's walkover survey throughout the interior of the workshop, which suggests that periodic, de minimis surface spills have occurred. However, there are no indications of larger or more significant spills and none of the surfaces in the vicinity of these areas are unpaved.

- **OEF 3 (14321 Myford Road) – ACMs and LBP.** The site was developed in or before 1980, prior to certain restrictions on using asbestos-containing materials ACMs and LCMs in construction. That said, the original building has since been extensively remodeled and SCAQMD records indicate at least some ACMs were abated in 2011. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs, however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

Soil Vapor Sampling and Analysis

Subsequent to the preparation of the Phase I ESA, a Soil Vapor Assessment was performed on the project site to determine the possible presence of VOCs in soil vapor. The Soil Vapor Assessment found elevated levels of tetrachloroethylene (PCE) in only one of the six reported samples and trichloroethylene (TCE) in one (albeit a different probe than the elevated level of PCE) of the six reported samples of VOCs taken on the project site. Given the isolated occurrences of elevated PCE and TCE concentrations in soil vapor, the elevated TCE concentration in ambient air, the conservatism of EPA's 0.03 AF and the only marginal exceedances of conservative indoor air screening levels, the soil vapor data do not warrant vapor intrusion mitigation measures.

Compliance with PDF HAZ-A, and all applicable Federal, State, and regional regulations, the project would not create short-term or long-term hazards due to transport of hazardous materials or upset of hazardous materials. Thus, a less than significant impact would occur.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact. There are no schools located within one-quarter mile of the project site. The nearest school, Nelson Elementary School (14392 Browning Avenue) is located approximately 0.70 miles from the project site. Heritage Elementary School (15400 Lansdowne Road) is approximately 1.40 miles from the project site. As mentioned above, the project would not emit, transport, or upset hazardous materials, substances or waste

near within one-quarter mile of an existing or proposed school. Less than significant impacts are anticipated.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. The project site is not included on the hazardous sites list compiled pursuant to California Government Code Section 65962.5.[15] The Phase I ESA indicated there were two RECs, two HRECs and six potential hazardous OEFs identified in association with the project site that required additional investigation. A Soil Vapor Assessment was conducted and concluded that vapor intrusion mitigation measures would not be necessary. Compliance with PDF HAZ-A would result in no significant adverse impacts relative to hazardous materials sites for the project site.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The project site is not located within an airport land use plan; the project site is not within two miles of a public airport or public use airport, or within the vicinity of a private airstrip. The project site is approximately 4 miles northeast of John Wayne Airport. Therefore, no impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. Implementation of the proposed project would not impair or physically interfere with an adopted emergency response or evacuation plan, including the City of Tustin Emergency Operations Plan, which was revised in November 2019. The purpose of the Emergency Operations Plan is to provide guidance for the City's response to emergency situations from natural disasters, technological incidents, and National security emergencies. The Emergency Operations Plan describes procedures for the effective and efficient allocation response to a hazardous materials emergency. It establishes an emergency organization, assigns tasks, specifies policy and general procedures, and provides coordination of planning for all phases of emergency planning for a hazardous materials emergency. No revisions to the adopted Emergency Operations Plan would be required as a result of implementation of the proposed project. Primary access to all major roads would be maintained during construction of the project site. Impacts would be less than significant.

[15] California Department of Toxic Substances Control. (2022). DTSC's Hazardous Waste and Substances Site List - Site Cleanup (Cortese List). Retrieved from https://dtsc.ca.gov/dtscs-cortese-list/. Accessed March 7, 2022.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. The City of Tustin is categorized as a Local Responsibility Area (LRA) by CAL FIRE. The project site is mapped as a non-very high fire hazard severity zone (VHFHSZ).[16] The project site is located within the City limits and surrounded by developed land. Although the project site is not located in a "Very High" FHSZ, the City, in conjunction with the Orange County Fire Authority reviews all building plans for compliance with the California Building Code, state and local statutes, ordinances, and regulations relating to the prevention of fire, the storage of hazardous materials, and the protection of life and property against fire, explosion, and exposure to hazardous materials. Adherence to regulations already in place through the development application and review process at the City would reduce the potential impacts associated with fire hazards as a result of adjacent wildlands to less than significant.

Cumulative Impacts

As noted above, the proposed project would not result in significant impacts related to hazards or hazardous materials. Impacts associated with hazardous materials are often site-specific and localized. The database search performed as part of the Phase I ESA documents the findings of various governmental database searches regarding properties with known or suspected releases of hazardous materials or petroleum hydrocarbons and serves as the basis for defining the cumulative impacts study area. Although some of the cumulative projects and other future projects associated with buildout of the surrounding communities could have potential impacts associated with hazardous materials, the environmental concerns associated with hazardous materials are typically site specific.

Projects are required to address any issues related to hazardous materials or waste. Projects must adhere to applicable regulations for the use, transport, and disposal of hazardous materials and implement mitigation in compliance with Federal, State, and local regulations to protect against site contamination by hazardous materials. Compliance with all applicable Federal, State, and local regulations related to hazardous materials would ensure that the routine transport, use, or disposal of hazardous materials would not result in adverse impacts. Any demolition activities associated with projects that effect asbestos or lead based paint would also occur in compliance with SCAQMD Rule 1403 and the CalOSHA Construction Safety Orders, which would ensure that hazardous materials impacts would be less than significant. Additionally, site-specific investigations would be conducted at sites where contaminated soil or groundwater could occur to minimize the exposure of workers and the public to hazardous substances.

[16] California Department of Forestry and Fire Protection. (2011). Tustin Very High Fire Hazard Severity Zones in LRA. Retrieved from https://osfm.fire.ca.gov/media/5896/c30_tustin_vhfhsz.pdf. Accessed March 7, 2022.

HYDROLOGY AND WATER QUALITY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?				X
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site?				X
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			X	
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
iv) Impede or redirect flood flows?			X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				X
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				X

A Hydrology Study and Preliminary Water Quality Management Plan (WQMP) were prepared by Thienes Engineering for the proposed project. The Hydrology Study and Preliminary WQMP are included in this Initial Study as **Appendices F** and **G**, respectively, and the results are summarized herein.

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. The project site is currently developed with two existing industrial/office buildings and associated parking lots. Runoff from the project site is routed to an existing City storm drain system that traverses through the project site along the westerly property boundary.

The project site is proposed to drain in a similar manner as the existing condition; however, runoff from the northwesterly portion of the building and the truck loading dock area would drain to catch basins located in the truck loading dock. A proposed storm drain would convey runoff around the building and connect to the existing 18" lateral line located at the westerly property line. Flows from the southeasterly half of the building would be collected by a catch basin near the south driveway. A proposed storm drain would convey runoff westerly to the southwest corner of the project site. This would confluence with the runoff from the southwesterly portion prior to connecting to the existing lateral. Before the on-site flows discharge off-site, manhole structures would divert low flows to a Bio Clean Modular Wetlands System for stormwater treatment. In addition, the truck loading dock area would act as an on-site detention basin prior to discharge off-site. The proposed project would meet stormwater treatment requirements in the Orange County MS4 Permit; and therefore, impacts to water quality as a result of the proposed project would be less than significant.

To minimize water quality impacts during construction of the proposed project, construction activities would be required to comply with a SWPPP consistent with the General Permit for Stormwater Discharge Associated with Construction Activity (Construction Activity General Permit). The SWPPP would incorporate Best Management BMPs such as gravel bags, silt fence, and fiber rolls. Preparation and implementation of a SWPPP would reduce potential impacts to water quality during construction to a less than significant level. No mitigation is required.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

No Impact. The proposed project does not propose to use groundwater. The proposed project is currently developed with two existing industrial/office buildings and associated surface parking lots and landscaping. The proposed project would not result in additional impervious surfaces on the project site. In addition, the proposed project would use an on-site detention basin and would construct a Bio Clean Modular Wetlands System for stormwater treatment before being discharge into the public storm drain system located along the proposed project's west property line within an existing easement. Therefore, the proposed project would not significantly impact local groundwater recharge. No impacts would occur in this regard and no mitigation is required.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

No Impact. The proposed project would not substantially alter the existing drainage patterns of the project site or vicinity. The proposed project would continue to drain to an existing City storm drain system that traverses through the project site along the westerly property boundary. The project site is currently developed with two existing industrial/office buildings and associated surface parking lots and landscaping. Construction of the proposed project would not increase the amount of impervious surface. The project proposes to use a Bio Clean Modular Wetlands System for stormwater treatment before being discharged into the public storm drain system located along the proposed project's west property line within an existing easement. In addition, the truck loading dock area would act as an on-site detention basin prior to discharge off-site. The project site does not contain any streams or rivers; therefore, none would be altered by the proposed project. Accordingly, no impact would occur and no mitigation is required.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

Less Than Significant Impact. Refer to Threshold 4.10 (c)(i) above. The proposed project would not substantially alter existing drainage patterns of the project site or project vicinity. The proposed project does not include any streams or rivers. Low flows would be directed to a Bio Clean Modular Wetlands System for treatment before being discharged into the public storm drain system located along the proposed project's west property line within an existing easement. In addition, the truck loading dock area would act as an on-site detention basin prior to discharge off-site. The proposed detention basin would also minimize the potential for flooding to occur on site or off site. Impacts would be less than significant and no mitigation is required.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. The proposed project discharges stormwater to an existing City storm drain system that traverses through the project site along the westerly property boundary. The proposed project would detain 100-year runoff to the existing 25-year peak flow rate in the truck loading dock area on the northwest side of the project site. The proposed project would not release more stormwater than existing conditions.

In addition, the proposed project would be required to prepare a SWPPP under the National Pollutant Discharge Elimination System (NPDES) General Construction Permit to implement BMPs to minimize stormwater runoff during construction. Adherence with the

recommendations of the Preliminary WQMP prepared for the proposed project, and preparation of a SWPPP would reduce possible impacts related to the stormwater drainage system to less than significant. No mitigation is required.

iv) Impede or redirect flood flows?

Less Than Significant Impact. Refer to Threshold 4.10 (c)(i) above. The proposed project would continue to drain west to an existing City storm drain system that traverses through the project site along the western property boundary. The project proposes to use the truck loading dock area as a detention basin to maintain existing stormwater flows off-site. The proposed project would comply with the City's requirements for detention and stormwater treatment. Therefore, downstream facilities would not be negatively impacted by the development of the project site. Accordingly, impacts to the issues related to flooding would be less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact. The proposed project is located over 8 miles east of the Pacific Ocean. There is no risk of exposure to inundation by seiche or tsunami. Accordingly, there is no significant risk of release of pollutants due to project inundation. Thus, no impact would occur and no mitigation is required.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. Water quality impacts other than those described in Threshold 4.10 (a) above are not anticipated with implementation of the proposed project. Furthermore, the proposed project does not propose to use groundwater and, as discussed in Threshold 4.10 (b) above, stormwater runoff would utilize an on-site detention basin and a Bio Clean Modular Wetlands System to detain and treat water prior to discharging into the public storm drain system. Therefore, the proposed project would not obstruct implementation of a water quality control plan or sustainable groundwater management plan. No impacts would occur in this regard and no mitigation is required.

Cumulative Impacts

The potential impacts related to hydrology and stormwater runoff are typically site specific and site specific BMPs are implemented at the proposed project level. The analysis above determined that the implementation of the proposed project would not result in significant impacts. In regards to proposed project impacts that would be considered less than significant, such impacts are not expected to result in compounded or increased impacts when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects, as other projects would be subject to similar laws and requirements regarding hydrology practices. Potential impacts are considered less than cumulatively considerable.

LAND USE AND PLANNING

ENVIRONMENTAL IMPACTS Issues		Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
11.	**LAND USE AND PLANNING. Would the project:**				
a)	Physically divide an established community?				X
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				X

a) Physically divide an established community?

No Impact. Projects that are typically considered to have the potential to divide an established community include the construction of new freeways, highways, roads, or other uses that physically separate an existing or established neighborhood. The proposed project does not include the construction of public roadways, structures, or other improvements that would be located between existing neighborhoods. Therefore, the proposed project would not physically divide or separate neighborhoods within an established community. The project site is located in a predominately infill industrial and commercial area. The City's General Plan land use designation for the project site is Planned Community Commercial/Business (PCCB). The current zoning for the parcel is PC IND. The land uses surrounding the project site consist of industrial and commercial uses, thus would not physically separate residential areas.

As discussed above, the proposed project is zoned for industrial uses and is surrounded by industrial and commercial uses, thus would not physically separate residential areas. Accordingly, the proposed project would generally blend in with the surrounding uses and would not physically divide an established community. Accordingly, the project site is being proposed in a part of the city where the site is not critical to the connectivity of the community. The project site does not serve the community as a gathering place, nor does it increase the sense of community by providing community space. The project would not divide an established community. Therefore, no impacts would occur and no mitigation is required.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The City's General Plan land use designation for the project site is PCCB. The current zoning for the parcel is PC IND. The project is further governed by the Irvine Industrial Complex Planned Community District Regulations which provides standards for site density, setbacks, building height, landscaping, and other standards related to the

character of the project. Consistent with the development regulations for the PC IND zone and the Irvine Industrial Complex Planned Community District Regulations, the proposed project would have a FAR of 0.475, a maximum building height of approximately 47'-6" and would comply with the minimum setback requirements for the Irvine Industrial Complex Planned Community District Regulations. The project would require a minimum of 76 automobile parking spaces, which would be provided on-site. Therefore, no impacts would occur, and no mitigation is required.

Cumulative Impacts

The proposed project does not conflict with any applicable land use regulations, land use policies, or land use planning documents. The proposed project does not propose any new roadways or other significant infrastructure improvements that would restrict access, require a diversion of existing travel routes, or otherwise divide an established community. Therefore, the proposed project would not contribute towards any cumulative impacts in these regards. The proposed Project would not result in an impact on any sensitive plant or animal species covered by a habitat conservation plan or natural community conservation plan, nor does it hinder the implementation or establishment of such plans. For these reasons, the proposed Project would not contribute to a cumulative impact or result in land use conflicts. Potential future projects would be subject to project level review of their land use impacts. As discussed above, the proposed project would not impact land use policies, therefore, taken with past, present and reasonably foreseeable projects impacts are not considered cumulatively considerable, and no cumulative impacts related to land use and planning would occur.

MINERAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

Existing Conditions

A mineral resource is any naturally occurring rock material with commercial value. The City's General Plan identifies the inactive Mercury-Barite deposit in Red Hill as the only mineral resource within the City and its SOI.[17] The project is located approximately 2 miles southwest of the Red Hill deposit. As such, the project site is not designated for mineral resource recovery and does not contain any known mineral resources and is not used for mining or mineral production.

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. While some amount of mineral resources may exist in the City limits, none are expected in the project site. Therefore, no impact would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. According to the General Plan, no mining operations are currently active within the City limits, and none are being considered. The proposed project therefore would not have an effect on locally important mineral resources recovery site.

Cumulative Impacts

The proposed Project would not result in direct or indirect permanent or temporary impacts related to mineral resources. Implementation of the proposed project would not result in the loss of an area that is designated for mineral resource extraction and would not result in the inability to use any other areas for such purpose. Therefore, the proposed project would not result in incremental effects to the loss of mineral resources that could be compounded or increased when considered together with similar effects from other past, present, and

[17] City of Tustin. (2018). City of Tustin General Plan, Open Space and Recreation Element. page 41. Retrieved from https://tustinca.org/396/General-Plan. Accessed March 7, 2022.

reasonably foreseeable future projects. Thus, no cumulative impacts related to mineral resources would occur. As a result, no cumulative impacts related to mineral resources would occur.

NOISE

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

Discussion

Noise is generally defined as loud, unpleasant, unexpected, or undesired sound that is typically associated with human activity and that interferes with or disrupts normal activities. The human environment is generally characterized by a certain consistent noise level that varies by area. This is called ambient, or background noise. Although exposure to high noise levels has been demonstrated to cause hearing loss, the principal human response to environmental noise is annoyance. The response of individuals to similar noise events is diverse and influenced by the type of noise, perceived importance of the noise and its appropriateness in the setting; time of day and type of activity during which the noise occurs, and sensitivity of the individual.

Sound is a physical phenomenon consisting of minute vibrations that travel through a medium, such as air, and are sensed by the human ear. Sound is generally characterized by several variables, including frequency and intensity. Frequency describes the sound's pitch and is measured in cycles per second, or hertz (Hz). Intensity describes the sound's loudness and is measured in decibels (dB). Normal speech has a sound level of approximately 60 dB. Sound levels above about 120 dB begin to be felt inside the human ear as discomfort and eventually as pain at still higher levels. The minimum change in the sound level of individual events that an average human ear can detect is about 3 dB. Decibels are measured using a logarithmic scale; thus, the average person perceives a change in sound level of about 10 dB as a doubling (or halving) of the sound's loudness. This relation holds true for sounds of any loudness.

Because community noise fluctuates over time, a single measure called the Equivalent Sound Level (Leq) is often used to describe the time-varying character of community noise. The Leq is the energy-averaged A-weighted sound level during a measured time interval, and is equal to the level of a continuous steady sound containing the same total acoustical energy over the averaging time period as the actual time-varying sound.

Another sound measure known as the Community Noise Equivalent Level (CNEL) is an adjusted average A-weighted sound level for a 24-hour day. It is calculated by adding a 5 dB adjustment to sound levels during evening hours (7:00 p.m. to 10:00 p.m.) and a 10 dB adjustment to sound levels during nighttime hours (10:00 p.m. to 7:00 a.m.). These adjustments compensate for the increased sensitivity to noise during the typically quieter evening and nighttime hours. The CNEL is used by the State of California and the City to evaluate land use compatibility with respect to transportation noise.

The City's Noise Ordinance (Article 4, Chapter 6 of the City's Municipal Code) specifies that exterior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 50 dBA between 10:00 p.m. and 7:00 a.m. in residential areas, shall not exceed 60 dBA in commercial areas at any time, and shall not exceed 70 dBA in industrial areas at any time. Interior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 45 dBA between 10:00 p.m. and 7:00 a.m. in residential areas.

Additionally, Section 4617 (e) of the City's Municipal Code limits construction activities to occur between the hours of 7:00 a.m. and 6:00 p.m. Monday through Friday, between 9:00 a.m. and 5:00 p.m. on Saturdays, and is prohibited on Sundays and observed federal holidays (unless otherwise agreed to by the City).

Existing Noise Environment

Some land uses are considered sensitive to noise. Noise-sensitive receptors are associated with indoor and/or outdoor activities subject to stress and/or significant interference from noise, such as residential dwellings, transient lodging, dormitories, hospitals, educational facilities, public assembly facilities, amphitheaters, playgrounds, congregate care facilities, childcare facilities and libraries. Industrial and commercial land uses are generally not considered sensitive to noise.

The project site is surrounded by industrial and commercial land uses. The nearest residential community is located approximately 1,600 feet to the northwest along Tustin Ranch Road.

The project site is located on the west side of Myford Road, east of Walnut Avenue, approximately 0.3 miles west of SR 261, and approximately 0.7 miles west of the I-5 freeway. Noise sources for the area are mainly associated with industrial uses and the traffic noise along nearby streets and freeways. Myford Road is a north-south secondary roadway shared with the City of Irvine. In the project vicinity, Myford Road is a four-lane undivided roadway. Walnut Avenue is an east-west primary roadway beginning in the City of Tustin and terminating in the City of Irvine at Myford Road. Walnut Avenue is located approximately one quarter of a mile to

the south of the project site. West of Myford Road, it provides two travel lanes in each direction, and provides three travel lanes in each direction to the east of Myford Road in the City of Irvine.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less Than Significant Impact.

Construction

The project is surrounded on all sides by existing commercial and industrial properties and the nearest sensitive receptors are located approximately 1,600 feet from the property boundary and major project construction areas. Further, project construction would be completed consistent with Section 4617 (e) of the City's Municipal Code. Due to project compliance with the City's Municipal Code and the distance between project construction areas and sensitive receptors, impacts would be less than significant and mitigation is not required.

Operations

Noise impacts are considered significant for residences if exterior noise levels exceed 55 dBA CNEL. The operation of the project shall be required to be in accordance with the City's Noise Ordinance set forth in Article 4, Chapter 6, Section 4614 and 4617(e) of the City's Municipal Code, which specifies that exterior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 50 dBA between 10:00 p.m. and 7:00 a.m. in residential areas, shall not exceed 60 dBA in commercial areas at any time, and shall not exceed 70 dBA in industrial areas at any time. Interior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 45 dBA between 10:00 p.m. and 7:00 a.m. in residential areas. As discussed above, the project site is located adjacent to existing industrial sites and would not generate noise levels in excess of standards once operational. Given the project site and use is similar to adjacent uses and would not change ambient noise levels to nearby residential uses, the impact is less than significant, and no mitigation is required.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact. The proposed project does not involve heavy manufacturing drilling or other subterranean activities that would generate excessive groundborne vibration or groundborne noise levels when in operation. In addition, construction activities for the project are not anticipated to involve pile driving or blasting; therefore, a less than significant impact would occur and no mitigation is required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The project site is not located near a private airstrip or within the vicinity of an airport land use plan. John Wayne Airport is located approximately four miles southwest of the project site and, therefore, would not expose persons to excessive airport-related noise levels. No impacts would occur and no mitigation is required.

Cumulative Impacts

The project's construction activities would not result in a substantial temporary increase in ambient noise levels. The operation of the project shall be required to be in accordance with the City's noise standards set forth in Article 4, Chapter 6, Section 4614 and 4617(e) of the City's Municipal Code, which specifies that exterior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 50 dBA between 10:00 p.m. and 7:00 a.m. in residential areas, shall not exceed 60 dBA in commercial areas at any time, and shall not exceed 70 dBA in industrial areas at any time. Interior noise level shall not exceed 55 dBA between 7:00 a.m. and 10:00 p.m. and 45 dBA between 10:00 p.m. and 7:00 a.m. in residential areas. There would be periodic, temporary, noise impacts that would cease upon completion of construction activities. However, based on the noise analysis above, the project's construction-related noise impacts would be less than significant following compliance with the General Plan and the Municipal Code. Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the project site and vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with project specific noise impacts, would not be cumulatively significant.

POPULATION AND HOUSING

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

Demographic Setting

According to the Southern California Association of Governments (SCAG), in 2018, the City had a total population of 82,344 residents and approximately 28,118 housing units.[18] As reported by the California Department of Finance (DOF), the vacancy rate is a measure of the availability of housing in a community. It also demonstrates how well the available units meet the market demand. A low vacancy rate suggests that residents may have difficulty finding housing within their price range and a high supply of vacant units may indicate either the existence of a high number of desired units, or an oversupply of units. A healthy vacancy rate is generally accepted at seven or eight percent. A low vacancy rate is about two percent. The City's current vacancy rate is approximately 4.9 percent.[19] SCAG projects the County to grow in population to approximately 22 million people by 2040, which totals nearly 4 million additional people.[20]

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The project would require a temporary construction workforce and a permanent operational workforce, both of which could potentially induce population growth in the area. The temporary workforce would be needed to construct the warehouse distribution building and associated improvements. Because the future tenant is not yet known, the number of jobs that the project would generate cannot be precisely determined. However, the proposed project would replace two industrial/office buildings (81,008 square feet and 55,090 square feet) with one 148,437 square foot

[18] Southern California Association of Governments. (2019). Profile of the City of Tustin. Table 11. Retrieved from https://scag.ca.gov/sites/main/files/file-attachments/tustin_localprofile.pdf?1606012675 Accessed March 7, 2022.
[19] California Department of Finance. (2022). Report E-5 Population and Housing Estimates for Cities, Counties, and the State, January 2011-2021, with 2010 Benchmark. Retrieved from https://dof.ca.gov/Forecasting/Demographics/Estimates/estimates-e5-2010-2021//. Accessed March 7, 2022.

warehouse distribution building. Employment created by the proposed project would likely replace existing jobs on the existing project site. Therefore, the project's temporary and permanent employment requirements could likely be met by the City's existing labor force without the relocation of people into the region. Therefore, impacts associated with population growth would be less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. No residential dwelling units exist on-site. Because there would be no displacement of people or housing, no impacts would occur.

Cumulative Impacts

The proposed project would not result in direct or indirect permanent or temporary impacts related to population, housing, or employment. Therefore, the proposed project would not result in material effects to population, housing, or employment that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. As a result, no cumulative impacts related to population and housing would occur.

PUBLIC SERVICES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
15. PUBLIC SERVICES. Would the project:				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?			X	
ii) Police protection?			X	
iii) Schools?			X	
iv) Parks?			X	
v) Other public facilities?			X	

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?

Less Than Significant Impact. The proposed project would replace two industrial/office buildings (81,008 and 55,090 square feet) with the proposed 148,437 square foot warehouse distribution building. The area surrounding the project site is developed with industrial and commercial buildings. Implementation of the project would have a minimal increase in demand for fire protections services in Tustin. Further, the project would be developed in accordance with applicable city, county, and state regulations, codes, and policies pertaining to fire hazard reduction and protection. The proposed warehouse would be equipped with emergency sprinkler systems and fire detectors. Water lines with fire-sufficient flows supplied by the Irvine Ranch Water District (IRWD) be connected to fire hydrants placed in accordance with Orange County Fire Authority (OCFA) standards.

Fire protection and emergency response services are currently provided for the project site by OCFA, a regional fire service agency that serves 23 cities in Orange County and all unincorporated areas. The OCFA operates 77 fire stations throughout Orange County, including three within the City of Tustin. Fire Station 37, located at 15011 Kensington Park Drive, is approximately 0.85 miles west of the project site, Fire Station 21, located at 1241 Irvine Boulevard, is approximately 2.2 miles north of the project site, and Fire Station 43, located at 11490 Pioneer Road, is approximately 2.9 miles northeast of the project site.

With compliance of the applicable city, county, and state regulations, codes, and policies, potential impacts on fire services from implementation of the project would be less than significant.

ii) Police protection?

Less Than Significant Impact. Implementation of the proposed project would result in a minimal increase in demand for police protections services in Tustin. The proposed project would be served by the City of Tustin Police Department (TPD), located at 300 Centennial Way, which is approximately 2 miles northwest of the project site. TPD currently has nearly 100 sworn officers and 55 civilian support personnel providing law enforcement services 24 hours a day, 365 days a year.[21]

The project proposes to construct a new warehouse building that would operate on the project site, replacing two existing industrial/office buildings. Further, the proposed project is in a developed area and is currently served by the TPD. The proposed project is not anticipated to increase response times to the project site or surrounding areas. Further, the proposed project does not require new or physically altered police protection facilities. Therefore, impacts would be less than significant, and no mitigation is required.

iii) Schools?

Less Than Significant Impact. The project site is located in the Tustin Unified School District (TUSD). The nearest schools are located approximately 0.70 miles and 1.40 miles from the project site: Nelson Elementary School, located at 14392 Browning Ave and Heritage Elementary School, located at 15400 Lansdowne Road respectively.

The proposed project is a non-residential land use. Implementation of the proposed project would not directly result in an increased population in the City and therefore would not increase the need for the construction of additional school facilities. TUSD requires development fees to be paid by the applicant (eligible for fee credits for existing building square footage). Upon payment of the required fees, no significant impacts would occur for school services or facilities and no mitigation is required.

[21] City of Tustin Police Department (2022). About Us. Retrieved from https://www.tustinca.org/177/About-Us. Accessed March 31, 2022.

iv) Parks?

Less Than Significant Impact. The proposed project does not have a residential component. As such, the proposed project would not create a significant increased demand or need for the construction or use of park facilities. The City has established park development fees to offset the costs associated with increased maintenance and the addition of park facilities resulting from new development. The City's Park development fees are generated based on the type of land use. Residential uses are required to pay a park development fee; however, nonresidential uses such as industrial uses are not obligated to contribute to park development fees. Therefore, the impact would be less than significant and no mitigation is required.

v) Other public facilities?

Less Than Significant Impact. The proposed project would be subject to Development Impact Fees (DIF) including New Construction Fees and Major Thoroughfare & Bridge Fee (The Toll Roads/Transportation Corridor Agencies) (both of which are eligible for fee credits for existing building square footage). The DIF levied on the proposed project would help the City in providing for infrastructure, equipment, and staffing. Therefore, impacts would be less than significant and no mitigation is required.

Cumulative Impacts

The proposed project would not result in a significant cumulative impact to public services or facilities. The project would result in new employees and potentially new residents in the project area. However, the proposed project would not result in growth beyond what has been planned in the General Plan. Similar to the proposed project, future projects would be required to compensate the City for potential increases in demand for public services. It is expected that impacts of future projects would be required to demonstrate the availability of services or mitigate accordingly. Therefore, the proposed project would not result in substantial incremental effects to public services and facilities when taken in sum with other past, present, and reasonably foreseeable projects.

RECREATION

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
16. RECREATION. Would the project:				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The proposed project does not include development of residential uses, which would directly increase population and result in increased demand for parks and recreational facilities. Accordingly, implementation of the proposed project would not generate an increase in demand on existing public or private parks or other recreational facilities which could result in increased physical deterioration of the facility. Because the proposed project involves a warehouse distribution use, the proposed project would not be subject to the City of Tustin Development Park Impact Fee. Therefore, no impacts to existing recreational facilities would occur and no mitigation is required.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The proposed project does not include nor does it require the construction or expansion of recreational areas. Therefore, no impacts would occur.

Cumulative Impacts

The proposed project would not result in an increased use of recreational facilities or require construction or expansion of existing recreational facilities. Therefore, taken in sum with past, present, and reasonably foreseeable projects, no cumulative impacts on recreational facilities would result from implementation of the proposed project.

TRANSPORTATION

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
17. TRANSPORTATION. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			X	
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			X	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X
d) Result in inadequate emergency access?			X	

The Trip Generation and Vehicle Miles Traveled (VMT) Memorandum (Traffic Memo), prepared for the project by Kimley-Horn and Associates (May 5, 2022), evaluates the change in project-related traffic associated with the proposed project, compared to the existing land uses. The Traffic Memo is summarized herein and included as **Appendix H**.

Trip Generation

A trip generation comparison between existing conditions and the proposed project was prepared in order to evaluate whether the net change in project-related trips would cause deficiencies on the existing roadway network. Trip generation estimates are based on daily and peak hour trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition).

Source*:* Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition

The proposed project is estimated to result in a decrease in the total site daily and morning peak-hour trips generated by 90 and 6 PCE trips, respectively, while increasing the afternoon peak hour trips by 52 PCE trips. Based on this nominal increase during the afternoon peak-hour, and decrease in the number of trips on a daily basis and during the morning peak-hour, a traffic study is not required for the proposed project as confirmed with the City of Tustin.

Low-VMT Area Screening

Projects located in areas with low VMT, and that incorporate similar features (i.e., density, mix of uses, transit accessibility), tend to exhibit similarly low VMT. Because new development in such locations would likely result in a similar level of VMT, low VMT areas can be used to screen out projects from needing to prepare a detailed VMT analysis. VMT data based on Orange County Transportation Analysis Model (OCTAM) shows the employment (commute) VMT per employee for the traffic analysis zone (TAZ) in which the project is located is below than the Citywide VMT per employee. The project VMT per Employee is 23.1, which is lower than the Citywide VMT per employee of 23.6. The project site is in a low VMT area based on OCTAM.

Project Type Screening

Projects that generate less than 110 daily trips may be screened from conducting a VMT analysis based on the Office of Planning and Research (OPR) Technical Advisory. As stated previously, the project is estimated to decrease the total daily trips generated by 90 trips as compared to the existing uses on the site. Since the proposed project generates less than 110 net daily traffic trips, the project has been determined to have a less than significant level of VMT impact.

a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less Than Significant Impact. Short-term construction trips would include the transfer of construction equipment, construction worker trips, and hauling trips for construction materials; however, impacts in this regard would be temporary in nature and would cease upon project completion. As shown in the **Table 14,** operation of the proposed project is estimated to decrease the total site daily and morning peak-hour trip generation by 90 and 6 PCE trips, respectively. The afternoon peak-hour trips would increase by 52 PCE trips. Due to the nominal increase during the afternoon peak-hour and decrease in trips on a daily basis, as well as during the morning peak-hour, the proposed project would not adversely affect the circulation system. Thus, impacts have been concluded as less than significant. No project components would require removal of vehicular lanes, such that capacity would be reduced, or that would affect transit service. Therefore, impacts would be less than significant.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less than Significant Impact. Senate Bill 743 (SB 743) was approved by the California legislature in September 2013. SB 743 requires changes to CEQA, specifically directing the

OPR to develop alternative metrics to the use of vehicular LOS for evaluating transportation projects. OPR has prepared a technical advisory for evaluating transportation impacts in CEQA and has recommended that VMT replace LOS as the primary measure of transportation impacts. The Natural Resources Agency has adopted updates to CEQA Guidelines to incorporate SB 743 that requires use of VMT for the purposes of determining a significant transportation impact under CEQA.

Truck Trips Related to Shipping Activities

The OPR guidance indicates that, although heavy vehicle traffic can be included for analysis convenience, the SB 743 analysis requirements are specific to passenger-vehicles and light duty trucks. While it may be appropriate to consider heavy vehicle traffic if directed by the lead agency, it is generally understood that interstate commerce and related heavy vehicle traffic are regulated by the federal government as it relates to commerce. Irrespective of this and considering that the end-user of this facility is unknown at this time (thus the nature of the business enterprise and its probable origins and destinations are unknown), it is reasonable to assume that the ultimate end user would select this location, at least in part, as to how it effects their transportation costs. Most often businesses who have shipping as a significant part of their operations are sensitive to transportation costs and their relative proximity to customers and suppliers. Accordingly, it is reasonable to assume that warehouses are often located in a manner to reduce VMT, given that it is the interest of the business.

As described above, the project site is in a low VMT area based on OCTAM and generates less than 110 net daily trips. As such the project would result in a less than significant impact under SB 743.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

No Impact. The design features of the proposed project do not incorporate any hazardous or incompatible features. The drive aisles/fire lanes within the project site have been designed to be both efficient and safe for vehicular traffic. Additionally, the project would not be an incompatible use, nor would it be hazardous due to its design. Therefore, no impact would occur.

d) Result in inadequate emergency access?

Less Than Significant Impact. The project provides two 35-foot and one 27-foot driveway entries on Myford Road. Project design features and ingress and egress are developed to comply with all relevant emergency regulations. Additionally, construction of the proposed project is not expected to require road closures or otherwise adversely affect emergency access around the site perimeter.

As a standard practice, if road closures (complete or partial) were necessary, the Police and Fire Departments would be notified of the construction schedule and any required detours would allow emergency vehicles to use alternate routes for emergency response. The impact on emergency access would be less than significant.

Cumulative Impacts

The proposed project would not result in direct or indirect significant impacts related to transportation. Therefore, the proposed project would not result in incremental effects to transportation that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. As a result, no cumulative impacts related to transportation would occur.

TRIBAL CULTURAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
18. TRIBAL CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?				X
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?		X		

The discussion below relies on the City's General Plan as it relates to the cultural and tribal resources and the project site.

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: i) Listed or eligible for listing in the California:

i) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).*

No Impact. As discussed above in Section 4.5, *Cultural Resources*, the proposed project would result in no impact on sites that are listed or eligible for listing in the California Register of Historic Resources.

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public

Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Potentially Significant Unless Mitigation Incorporated. Per the City's standard practice and in accordance with Assembly Bill 52 (AB 52), including Section 21080.3.1(d), the City circulated letters via certified mail on June 30, 2022 to the tribes referenced in Section 3.0 (10) to request comments and input on the proposed project and the potential to affect Tribal and Cultural Resources.

At the expiration of the AB-52 noticing period (30 days) on August 1, 2022, the City only received one response letter from the Gabrieleño Band of Mission Indians – Kizh Nation ("Kizh Nation") to request consultation. On August 16, 2022, Kizh Nation proposed three (3) mitigation measures to the City, which are included verbatim below as MM TCR-1, TCR-2, and TCR-3. With implementation of MM TCR-1, TCR-2, and TCR-3, the proposed project's potential impacts would be reduced to a level considered less than significant.

Mitigation Measures

TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities:

A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (the "Kizh" or the "Tribe"). The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Grounddisturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of grounddisturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes. Subsequent to the discovery and assessment of the TCR(s), if the Kizh does not relocate the TCR(s) to a location off-site, the project applicant shall be permitted to relocate the TCR(s) to a location within the project site boundary outside of the building footprint, truck court, and paved drive aisles and walkways. The project applicant shall be required to work in coordination with the Kizh to determine the exact location the TCR(s) is to be placed.

TCR-2: Unanticipated Discovery of Human Remains and Associated Funerary Objects:

A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.

C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that

determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)

E. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

F. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance, except as required to be disclosed by project applicant or its successor in interest.

G. Subsequent to the discovery and assessment of human remains and/or burial goods, the project applicant shall be required to work in coordination with the Kizh to reintern the human remains in the discovered location within the project site boundary, or if in the discretion of the Kizh, it is determined that reinternment is not possible without material project delays, then to relocate the human remains and/or burial goods to a location within the project site boundary outside of the building footprint, truck court, and paved drive aisles and walkways. The project applicant shall be required to work in coordination with the Kizh in good faith to determine the exact location the human remains and/or burial goods are to be placed. (Cal. Pub. Res. Code § 5097.98(e).)

TCR-3: Procedures for Burials and Funerary Remains:

A. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

B. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

C. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

D. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours.

E. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

F. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

G. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the California Native American Heritage Commission (NAHC). The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

H. Subsequent to the discovery and assessment of human remains and/or burial goods (three or less burials), the project applicant shall be permitted to inter or relocate the human remains and/or burial goods (three or less burials) to a location within the project site boundary outside of the building footprint, truck court, and paved drive aisles and walkways in accordance with California Public Resources Code §5097.98(e).

Cumulative Impacts

The proposed project would result in less than significant impacts to tribal cultural resources after incorporation of mitigation. The chances of cumulative impacts occurring as a result of project implementation plus implementation of other projects in the region is not likely since all past, present, and reasonably foreseeable project would have been or subject to individual project-level environmental review. Since project-related impacts would be reduced to a less than significant level with mitigation, and because existing laws and regulations are in place to protect tribal cultural resources and prevent significant impact to such resources, the potential incremental effects of the proposed project would not be cumulatively considerable.

UTILITIES AND SERVICE SYSTEMS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			x	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			x	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			x	
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			x	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			x	

Utility providers for the proposed Project were contacted and the correspondence with these providers is included in **Appendix I**. As described in **Appendix I**, power will be provided by SCE, natural gas will be provided by SoCalGas, domestic water, irrigation water, fire water, and sewer will be provided by IRWD, and telecommunications will be provided by AT&T, fiber will be provided by Charter Communications, and cable will be provided by Cox Communications.

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. The City does not own or operate wastewater treatment facilities or sewers and sends all collected wastewater to the Orange County Sanitation District (OCSD) for treatment and disposal. Wastewater services within the City are

provided by OCSD and IRWD. Collected wastewater is sent to OCSD's facilities located in the Cities of Huntington Beach and Fountain Valley. OCSD's Plant No. 1 in Fountain Valley has a capacity of 320 million gallons per day (MGD) and Plant No. 2 in Huntington Beach has a capacity of 312 MGD.[22]

The proposed project is located within an urbanized area of the City of Tustin. Accordingly, the proposed project does not increase the need for utility facilities beyond what was evaluated in the City's General Plan. The proposed project includes uses that are consistent with the approved land use and zoning for the project site, thus the wastewater pipelines would be sufficient to convey project wastewater. Additionally, sewer, water, and wastewater lines are currently in place to serve the proposed project and relocation or expansion of these lines beyond the scope of the proposed project site, or construction of a new or expanded sewer, water, wastewater treatment facilities as a result of the proposed project would not be required. Stormwater, drainage, electric power, natural gas, and telecommunications facilities are in place to serve the project without the need for construction or relocation of utility facilities. Further, the applicant obtained "will serve" letters from required utility providers (see Appendix I) to provide service to the project including domestic water, fire water, and sewer (IRWD), power (SCE telecommunications (AT&T), fiber (Charter Communications), cable (Cox Communications), and natural gas (SoCalGas). Therefore, the proposed project would not require the construction of new sewer, water, wastewater, stormwater, drainage, electric power, natural gas, or telecommunication facilities which could cause significant environmental effects. Significant impacts would not occur, and no mitigation is required.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less Than Significant Impact. The proposed project would be served with potable water by the IRWD. According to IRWD's 2020 Urban Water Management Plan (UWMP), IRWD's will meet the projected water demands of existing and planned uses through 2040 under a single dry-year condition and over five years of consecutive drought, as well as in normal year conditions because IRWD sources imported water, groundwater, recycled water, and local surface water. Further, local supplies make up about 80% of IRWD's water supplies.[23]

The project would not require a zone change as it would be consistent with the City's approved land use and zoning. Thus, the project would be consistent with the water demand estimated for these parcels in the analysis provided in the UWMP.

Potable water would be supplied using imported water supplies, local surface and groundwater supplies and through recycling and water conservation. Water demand during construction would be temporary and would not require additional water beyond

[22] City of Tustin. (2016). 2015 Urban Water Management Plan. Retrieved from https://www.tustinca.org/Archive/39. Accessed March 7, 2022.
[23] Irvine Ranch Water District.(2021). 2020 Urban Water Management Plan. Page ES-3. Retrieved from https://www.irwd.com/doing-business/urban-water-management-plan. Accessed March 7, 2022.

the needs of typical construction projects of this type. Given that the project's proposed use is consistent with the project site's zoning and General Plan designation, and therefore consistent with the City's planned growth, which was accounted for in the City's UWMP, adequate water supplies would be available to serve the proposed project, impacts would be less than significant, and mitigation is not required.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. As discussed above, there are sufficient wastewater treatment facilities and capacity to service the project. The project would also be required to develop appropriately sized water and wastewater conveyance facilities to and from the project site. Thus, less than significant impacts would occur.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. The County of Orange owns and operates the Frank R. Bowerman Sanitary Landfill, which serves the City of Tustin. The proposed project is anticipated to generate solid waste during the temporary, short-term construction phase, as well as the operational phase, but it is not anticipated to result in inadequate landfill capacity. The Bowerman landfill has a maximum permitted capacity of approximately 266 million cubic yards, and a remaining capacity of approximately 205 million cubic yards. The landfill has an expected operational life through the year 2053, with the potential for vertical, or downward expansion.[24] The proposed project would replace two industrial/office buildings with footprints of approximately 81,008 square feet and 55,090 square feet with one 148,437 square foot proposed warehouse distribution building. Therefore, solid waste generated by the 148,437 square feet of proposed warehouse distribution uses would be similar to the solid waste currently generated by the 136,098 square feet of industrial/office uses that would be replaced by the proposed project. For these reasons, the proposed project's solid waste disposal needs can be met by the Frank R. Bowerman Sanitary Landfill.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less Than Significant Impact. The proposed project, as with all other developments in the City, would be required to adhere to City ordinances with respect to waste reduction and recycling. As a result, no impacts related to State and local statutes governing solid waste are anticipated and no mitigation is required.

[24] California Department of Resources Recycling and Recovery. (2022). Frank R. Bowerman Sanitary Landfill Detail (30-AB-0360). Retrieved from https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2767?siteID=2103. Accessed March 7, 2022.

Cumulative Impacts

The proposed project would have a less than significant impact with respect to utilities/service systems. The project would require water and wastewater infrastructure, as well as solid waste disposal for building facility construction and operation. Development of public utility infrastructure is part of an extensive planning process involving utility providers and jurisdictions with discretionary review authority. The coordination process associated with the preparation of development and infrastructure plans is intended to ensure that adequate resources are available to serve both individual projects and cumulative demand for resources and infrastructure as a result of cumulative growth and development in the area. Each individual project is subject to review for utility capacity to avoid unanticipated interruptions in service or inadequate supplies. Coordination with the utility companies would allow for the provision of utility service to the proposed project and other developments. The project and other planned projects are subject to connection and service fees to assist in facility expansion and service improvements triggered by an increase in demand. Because of the utility planning and coordination activities described above, the proposed Project, taken in sum with past, present, and reasonably foreseeable projects, would not result in significant cumulative utility impacts.

WILDFIRE

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				X
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. As discussed in Section 4.9, *Hazards and Hazardous Materials*, Threshold 4.9 (f), the proposed project would not impair or physically interfere with an adopted emergency response or evacuation plan, including the City of Tustin Emergency Operations Plan, which was revised in November 2019. The project does not include the construction of new roadways or vacation of roadways that would alter the Circulation Plan. Primary access to all major roads would be maintained during construction of the proposed project. Further, the conditions of approval for the project would include any additional requirements set forth by the City to ensure proper radio coverage for first responders in case of emergency at the project site. Therefore, no associated impacts would occur.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than Significant Impact. The proposed project is located in a predominately developed area consisting of industrial and commercial uses. The project site is currently

improved with two industrial/office buildings (81,008 and 55,090 square feet), ancillary auto parking lot, and landscaping. On-site vegetation consists of landscaped ornamental vegetation. According to wind rose data for the project area, wind generally travels to the south and southwest and has an average speed of 6.5 mph.[25] The surrounding area is largely developed and does not include large areas of vacant or open spaces areas, thus minimizing the likeliness of an uncontrolled spread of wildfire emanating from the project site. In addition, the project site does not include any steep slopes which would exacerbate the spread of wildfires. Further, as discussed in Section 4.9, *Hazards and Hazardous Materials*, Threshold 4.9 (g), the project site is mapped as a non-very high fire hazard severity zone (VHFHSZ). Impacts would be less than significant.

c) *Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

Less than Significant Impact. As described in Section 4.19, *Utilities and Service Systems*, Threshold 4.19 (b) above, water for the proposed project would be provided by the IRWD and additional water facilities would not be required to serve the project. The addition of the proposed project would not create an additional demand for water beyond those identified in the City's General Plan. Thus, adequate water required for fire emergency services would be available to the proposed project.

Additionally, the project would not include the installation of above ground utilities or power lines that could exacerbate the fire risk. The construction of underground utilities would reduce the fire risk associated with above ground utilities to a less than significant level.

d) *Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

Less than Significant Impact. As described in Section 4.10, *Hydrology and Water Quality,* Threshold 4.10 (c) above, potential hazards related to downstream flooding are less than significant. Under proposed conditions, on-site surface runoff would be captured and routed through a Bio Clean Modular Wetlands System for stormwater treatment before being discharge off-site. As discussed in Section 4.7, *Geology and Soils*, Threshold 4.7 (a), the project site is not located within an area susceptible to landslides. The proposed project would be constructed in accordance with the Uniform Building Code (UBC) and CBC, as well as the Geotechnical Investigation conducted for the project and the grading requirements contained within Article 8 of the City's Development Code. Thus, impacts would be less than significant.

[25] Iowa State University. (2022). Iowa Environmental Mesonet. Retrieved from https://mesonet.agron.iastate.edu/sites/windrose.phtml?station=SNA&network=CA_ASOS. Accessed March 31, 2022.

Cumulative Impacts

The proposed project would not result in direct or indirect significant impacts related to wildfires. Therefore, the proposed project would not result in incremental effects to wildfires that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. As a result, no cumulative impacts related to wildfires would occur.

MANDATORY FINDINGS OF SIGNIFICANCE

ENVIRONMENTAL IMPACTS Issues		Potentially Significant Issues	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
21.	**MANDATORY FINDINGS OF SIGNIFICANCE. Does the project:**				
a)	Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				X
b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X	
c)	Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	

a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

No Impact. All impacts to the environment, including impacts to habitat for fish and wildlife species, fish and wildlife populations, plant and animal communities, rare and endangered plants and animals, and historical and pre-historical resources were evaluated as part of this IS/MND. As discussed in Section 4.4, *Biological Resources*, the project would not have a significant impact on a sensitive habitat or species.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less Than Significant Impact. As discussed throughout this IS/MND, implementation of the proposed project has the potential to result in effects to the environment that are individually limited, and cumulatively may be considerable in specific areas in conjunction with past, present, and reasonably foreseeable development. In all instances where the proposed project has the potential to contribute to a cumulatively considerable impact to the environment, mitigation measures have been imposed to reduce potential effects to less-than-significant levels. As such, with incorporation of the Project Design Features and mitigation measures imposed throughout this IS/MND, the project would not contribute to environmental effects that are individually limited, but cumulatively considerable, and impacts would be less than significant.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact. The project's potential to result in environmental effects that could adversely affect human beings, either directly or indirectly, has been discussed throughout this IS/MND. In instances where the project has potential to result in direct or indirect adverse effects to human beings, mitigation measures have been applied to reduce the impact to below a level of significance. With required implementation of Project Design Features and mitigation measures identified in this IS/MND, construction and operation of the proposed project would not involve any activities that would result in environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly.

Chapter 2. Response to Comments on the Public Review MND

This chapter of the Final Mitigated Negative Declaration (MND) contains responses to the comments that the City of Tustin (Lead Agency) received on the Public Review MND (Chapter 1) for the Myford II Project during the public review period, which began April 20, 2023 and concluded on May 10, 2023. This document has been prepared in accordance with California Environmental Quality Act (CEQA) as amended (Public Resources Code Section 21000 et seq.) and the Guidelines for Implementation of the California Environmental Quality Act (State CEQA Guidelines) (Cal. Code Regs., tit. 14, § 15000 et seq.) and represents the independent judgment of the Lead Agency. This document, together with the Public Review MND, the Revisions to the Public Review MND, and the Mitigation Monitoring and Reporting Program comprise the Final MND. The following public comments were submitted to the City of Tustin during the public review period:

1. Dan Phu, Orange County Transit Authority, May 10, 2023 (1 page)
2. Tiffany Lin, City of Irvine, May 10, 2023 (2 pages)
3. David Solomon, Young's Holdings, Inc., May 15, 2023 (3 pages)

The public comments and responses to comments are included in the public record and are available to the Lead Agency decision-makers for their review and consideration prior to making their decision whether to approve the proposed Project. Pursuant to State CEQA Guidelines Section 15074(b) *Consideration and Adoption of a Negative Declaration or Mitigated Negative Declaration*, none of the comments provide substantial evidence that the Project will have significant environmental effects which would require preparation of an Environmental Impact Report. Further, none of the information in the letters or responses constitute the type of significant new information that requires recirculation of the MND for further public review under State CEQA Guidelines Section 15073.5 *Recirculation of a Negative Declaration Prior to Adoption*. None of this new material indicates that the Project will result in a significant new environmental impact not previously disclosed in the Myford II Project MND. Additionally, none of this information indicates that there would be a substantial increase in the severity of a previously identified environmental impact that will not be mitigated, or that there would be any of the other circumstances requiring recirculation described in State CEQA Guidelines Section 15073.5.

This Response to Comments includes revisions to the Public Review Draft MND based upon: (1) clarifications required to prepare a response to a specific comment; and/or (2) typographical errors. These revisions do not alter any impact significance conclusions as disclosed in the MND. Changes made to the MND are identified as ~~strikeout~~ text to indicate deletions and in **<u>underlined</u>** text to signify additions within Chapter 1 of this document.

Pursuant to California Public Resources Code (PRC) Section 21091(d)(1) and CEQA Guidelines § 15074(b), the City (the lead agency) is required to consider the comments received during its consultation and review periods for the MND; however, CEQA does not require a Lead Agency to prepare written responses to comments received for the MND. To that end, the City of Tustin has elected to prepare the following written responses with the intent of providing a comprehensive and meaningful evaluation of the proposed Project.

Subject: Notice of Intent (NOI) to adopt Mitigated Negative Declaration (MND) Regarding Myford II Industrial Building

Dear Ms. Carver:

Thank you for providing the Orange County Transportation Authority (OCTA) with the Notice of Intent to adopt the MND for the Myford II Industrial Building Project. The following comment is provided for your consideration:

- On page 68 of the MND, Table 12: Regional Transportation Plan/Sustainable Communities Strategy Consistency, Goal 2 Compliance, please remove any mention of an existing transit route on Myford Road near the project area. No such transit route exists.

Throughout the development of this project, we encourage communication with OCTA on any matters discussed herein. If you have any questions or comments, please contact me at (714) 560-5907 or at dphu@octa.net.

Sincerely,

Dan Phu
Manager, Environmental Programs

DP:tc

Applicant Response: Table 12 on page 68 of the MND has been revised to remove any reference to a transit route on Myford Road near the project area.

May 10, 2023

Leila Carver, Senior Planner Consultant

Tustin, CA 92780

Subject: **Notice of Intent to Adopt Mitigated Negative Declaration for 148,437 SF Industrial Building**

Dear Leila Carver:

Staff is in receipt of the notice of intent to adopt a mitigated negative declaration for the request to propose a new industrial building. The 148,437 square foot building includes 143,437 square feet of warehouse area, 5,000 square feet of office area, 103 on-site parking stalls, and 37,004 square feet of landscaping on approximately 7.18 acres located at 14321 and 14351 Myford Road.

Staff has reviewed the project proposal and has a couple of comments pertaining to truck operations. The comments have been included as Attachment 1. If you have any questions, please contact me at tilin@cityofirvine.org or 949-724-6361.

Sincerely,

Tiffany Lin
Associate Planner

ec: Marika Poynter, Manager of Planning Services

ATTACHMENT A

Project Background: The proposed project is located just north of a new warehouse building and west of Momentous Sports Facility on Myford Road. The proposed project is comprised on one warehouse distribution building totaling approximately 148,437 sf including 143,437 sf of warehouse, 5,000 sf of two-story office space and 19 loading docks. Project site will be accessed by three driveways; passenger vehicles have the option to access any of the three project driveways while trucks would access the project site at either the southerly or northerly driveways. Based on the Trip Generation Memo prepared for the project, the proposed project results in a decrease of 90 (PCE) daily, decrease of 6 (PCE) morning peak hour trips, and an increase of 52 (PCE) afternoon peak hour trips.

COMMENT 1
The City of Irvine is requesting the following information pertaining to truck operations:

•To ensure that trucks can safely maneuver on public streets shared with the City of Irvine, provide truck turning templates (WB-67 and CA Legal) including concurrent truck turns at the intersections of Jamboree/Michelle, Myford/Michelle,Myford/Walnut, Jamboree/Walnut, and at project driveways. Truck turns templates must demonstrate the ability to turn at these locations without clipping curbs, encroaching into conflicting lanes or damaging signal equipment. Improvements at these locations may be needed if truck turning cannot be accommodated with the existing intersection configurations.

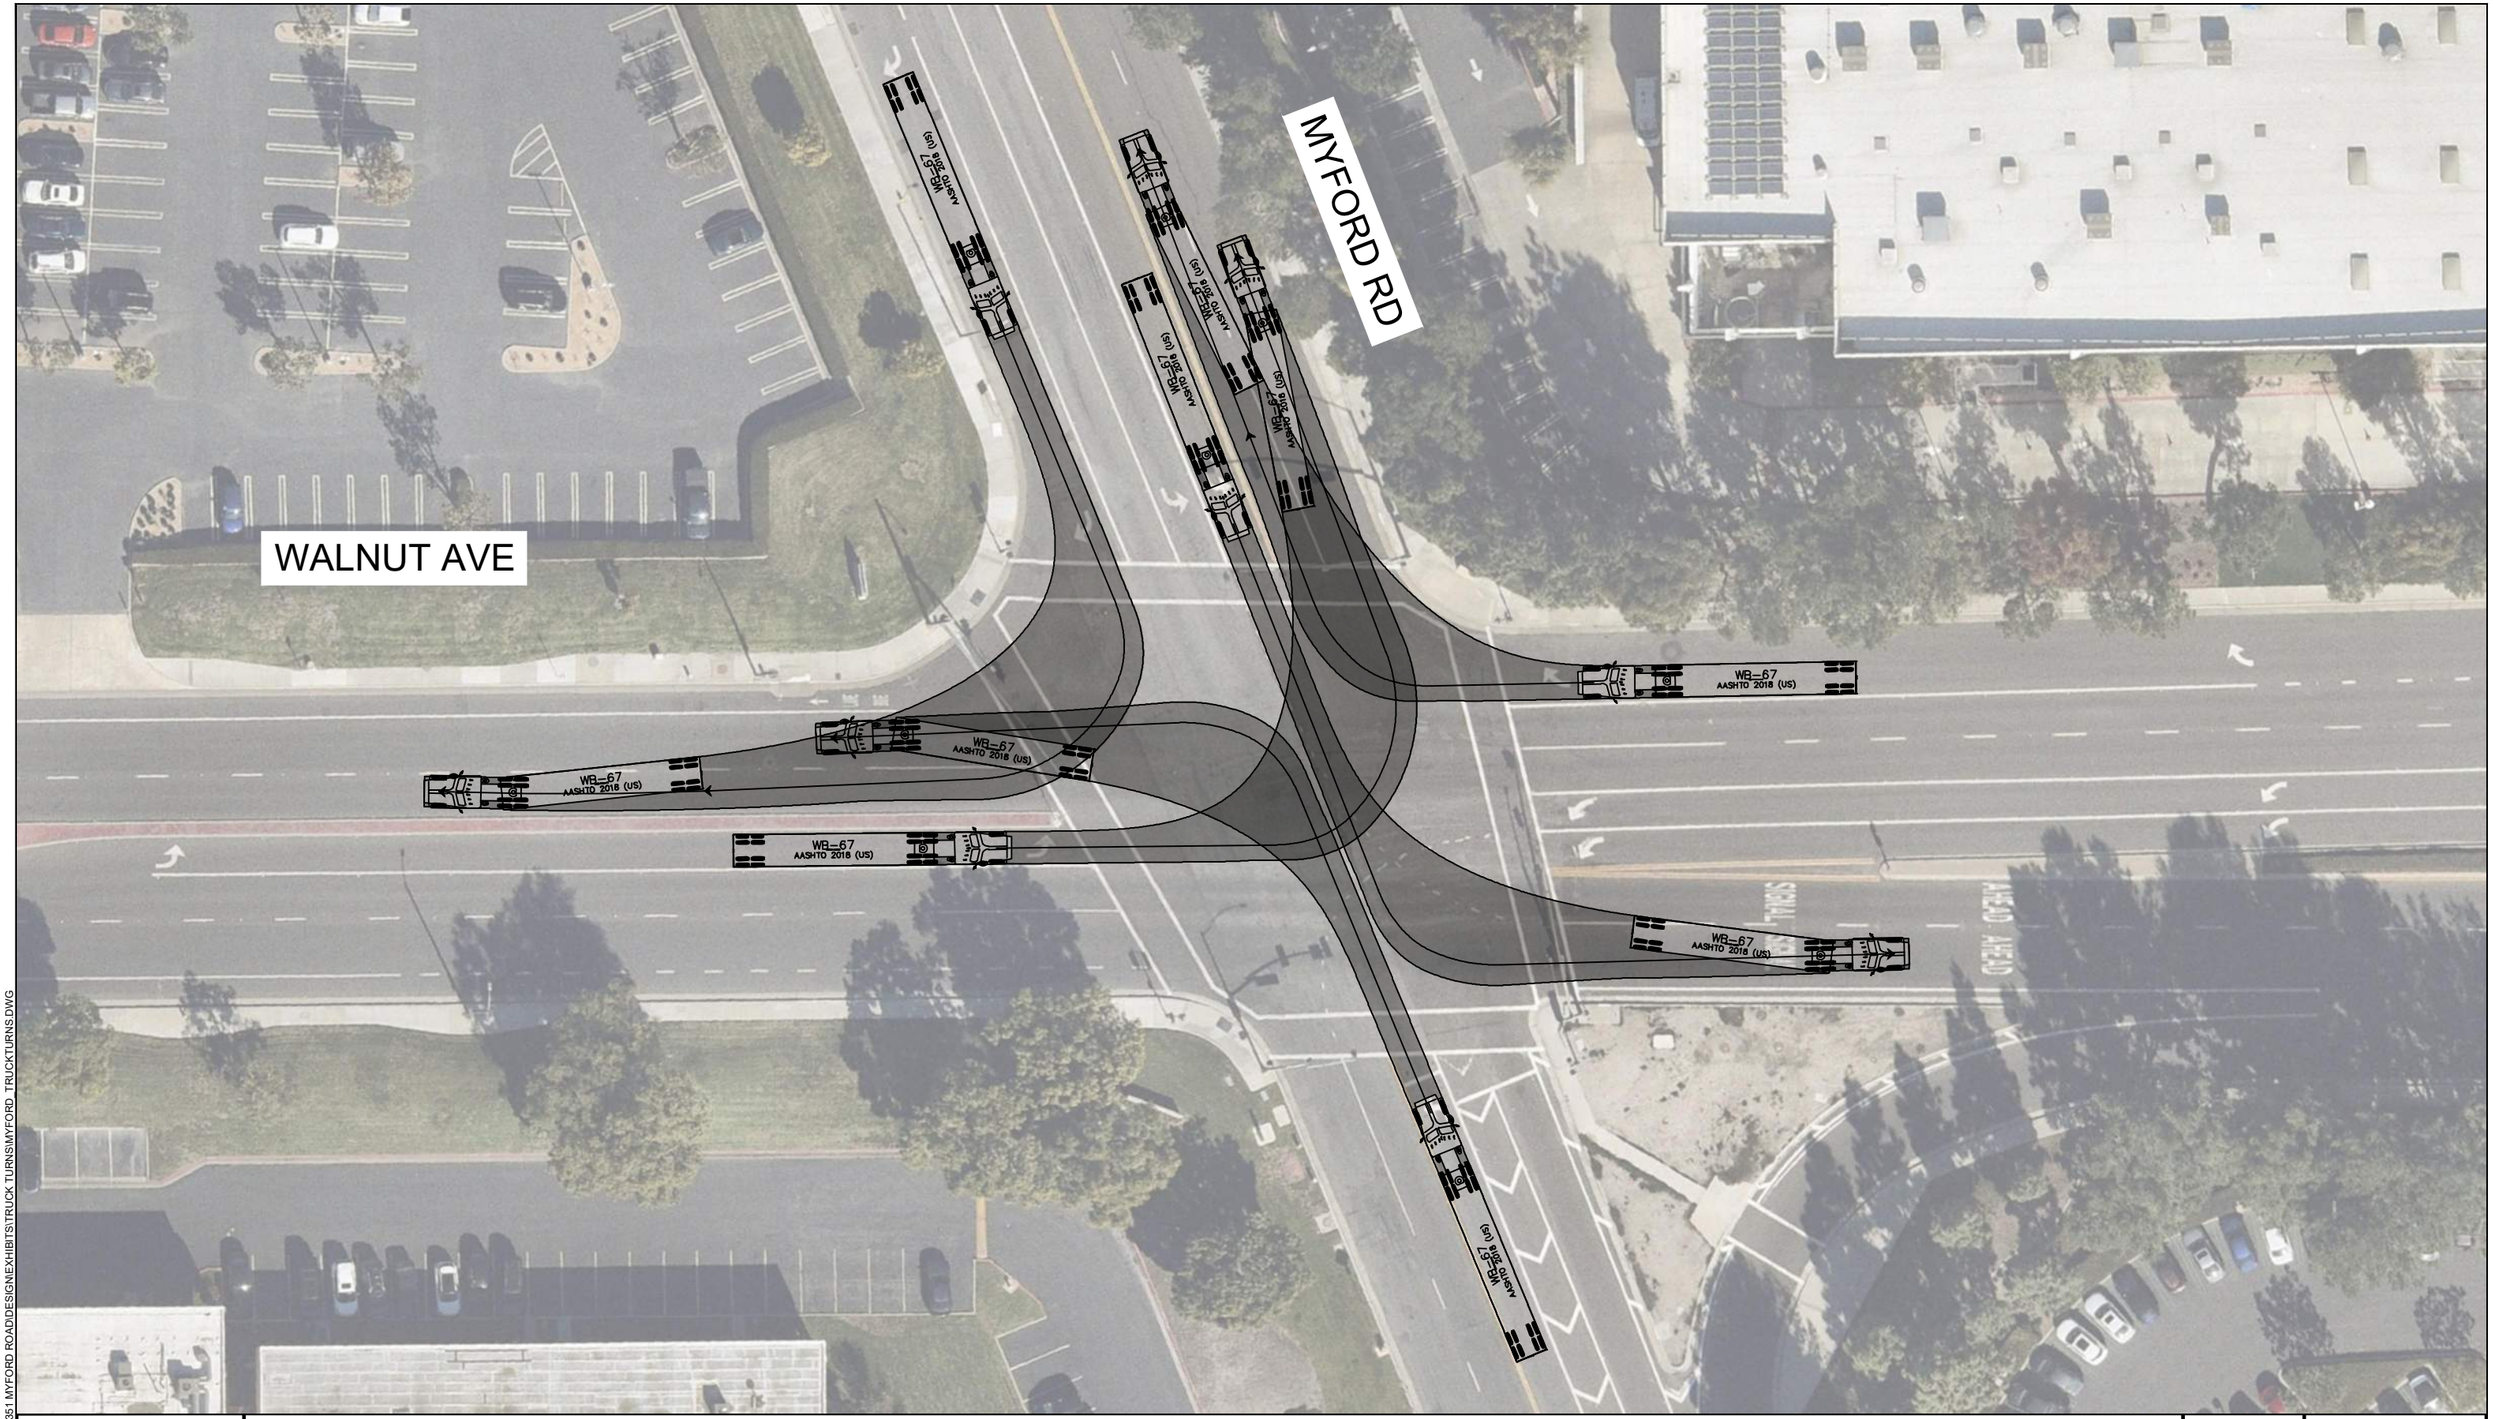
Applicant Response: Please see Exhibit A – Truck Turning Templates for the depiction of WB-67 truck turning movements at the four (4) intersections requested, which confirms no conflicts are anticipated to occur.

•Provide truck ingress and egress routes.

Applicant Response: The proposed Project is speculative in nature. Therefore, the Applicant does not know the exact planned truck ingress/egress routes to be used by the building's future occupant(s). However, it can reasonably be inferred that trucks entering/exiting the project will take the most efficient routes to the closest freeways: (1) I-5 Freeway via I-5 Fwy./Jamboree Road on/off ramp, (2) I-5 Freeway via I-5 Fwy./Tustin Ranch Road on/off ramp, and (3) State Route 261 via SR-261/Jamboree Road on/off ramp.

- **I-5 Freeway via I-5 Fwy./Jamboree Road on/off ramp: From the site, both Michelle Drive and Walnut Avenue are permitted as truck routes by the City of Tustin (Tustin General Plan Circulation Element Arterial Highway Plan) and Jamboree Road is designated as a truck route by the City of Irvine (Exhibit – Designated and Restricted Truck Routes per Irvine Municipal Code).**
- **I-5 Freeway via I-5 Fwy./Tustin Ranch Road on/off ramp: From the site, both Walnut Avenue and Tustin Ranch Road are permitted as truck routes by the City of Tustin (Tustin General Plan Circulation Element Arterial Highway Plan).**
- **State Route 261 via SR-261/Jamboree Road on/off ramp: From the site, Walnut Avenue is permitted as a truck route by the City of Tustin (Tustin General Plan Circulation Element Arterial Highway Plan) and Jamboree Road is designated as a truck route by the City of Irvine (Exhibit – Designated and Restricted Truck Routes per Irvine Municipal Code).**

•Consider requiring truck management strategies to ensure that trucks do not queue on Myford Road, and other adjacent public roadways.



Applicant Response: Per sheet DAB-A1.1 (Overall Site Plan), the project was designed with both entrances to the truck court set back far from Myford Road to allow for ample truck queueing on-site at both drive approaches, if needed.

More specifically, the truck court gate on the north side of the building is set back approximately 256' from the project's east property line along Myford Road at the north drive approach, and the truck court gate on the south side of the building is set back approximately 284' from the project's east property line along Myford Road at the south drive approach.

Using a standard length for WB-67 design truck and trailer of approximately 71' (incl. 53' trailer, 15' truck, plus 3' gap between), the project allows for approximately three (3) trucks to queue on the north drive aisle and approximately four (4) trucks to queue on the south drive aisle.

Per the Trip Generation and Vehicle Miles Traveled (VMT) Memorandum prepared by Kimley-Horn and Associates, Inc. dated May 5, 2022 (ISMND, Appendix H), it is anticipated that the proposed project would generate two (2) truck trips in the AM peak hour and three (3) truck trips in the PM peak hour. Therefore, the ample, onsite drive aisles proposed as part of the project could queue the anticipated peak hour truck traffic without trucks needing to queue on Myford Road or in any other adjacent public roadways.

Re: City of Tustin - Draft Mitigated Negative Declaration / Design Review 20220013 and Subdivision Map 2022-0003 / Tentative Parcel Map 2022-153

Dear Ms. Carver:

Young's Holdings Inc. ("Young's Holdings") is the owner of the property located at 14352 Franklin Ave., Tustin, CA ("Property"). Young's Holdings submits this opposition letter and objects to the City of Tustin's ("City") proposed approval of the draft Mitigated Negative Declaration ("MND"), Design Review 2022-0013, and Subdivision Map 2022-0003 / Tentative Parcel Map 2022-153 ("Entitlements") for the properties located at 14321 and 14351 Myford Road (APNs: 432-473-13 and -19) ("Panattoni Parcels"), which are to be considered as part of Items 16 and 17 on the City's May 23, 2023 Planning Commission Meeting.

Young's Holdings has a direct interest in the City's potential approval of the Entitlements, as Young's Holdings' Property is located directly adjacent to and behind the Panattoni Parcels (see Enclosure 1 for a Project Site Map). The City's consideration of the Entitlements is based on a hydrology report that was prepared in February 2022 (see 08App-F-to-ISMND-Myford-II-Tustin-41823 (tustinca.org)) which did not take into consideration the heavy rains that the area experienced in the fall of 2022 and winter of 2023. The recent rainfall significantly flooded another adjacent parcel to the south located at 14451 Myford Road (formerly owned by AT&T, which is now an Amazon warehouse). In the hydrology map prepared as part of the Panattoni Parcels' Entitlement submissions, the ponding limits are right up to the edge of the Property line on the Young's Holdings' Property; therefore, Young's Holdings is extremely concerned that its Property will experience flooding as a result of the proposed development of the Panattoni Parcels (see Enclosure 2 for the Hydrology Map).

Applicant Response: The Applicant, through an affiliated entity, designed, entitled, and constructed the adjacent industrial warehouse building project located at 14451 Myford Road. The drainage system on said property was specifically designed so that in the event of a storm event, the truck court would be flooded with excess water to a manageable depth (e.g. 1' or less), before percolating below ground, treated, and discharged into the City's existing 48" storm drain located within an easement along the project's westerly property line.

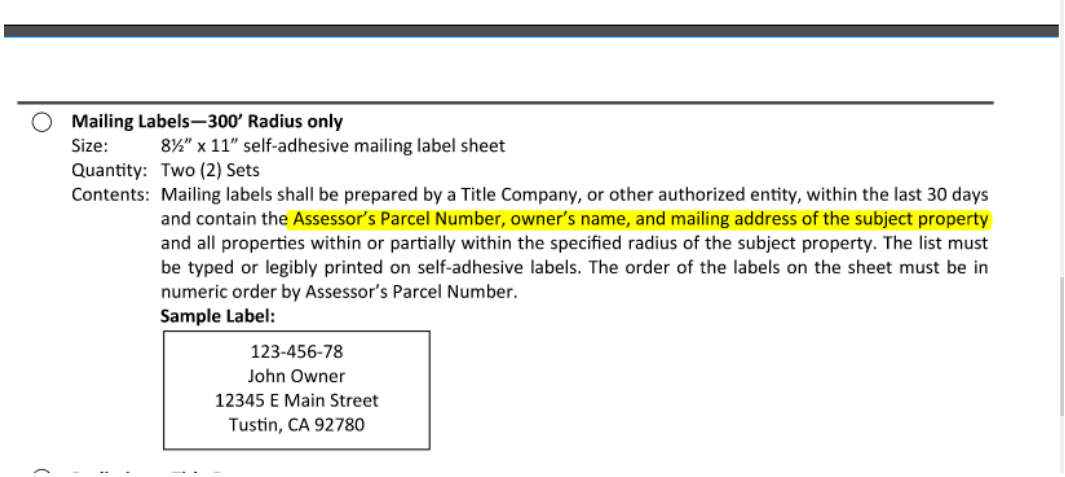
The flooding observed on this property (14451 Myford Road) is confirmation that the drainage system was functioning properly as designed, rather than an indication of a deficient system.

In order to address these serious and significant flooding concerns, Young's Holdings requests that the City require the hydrology study to be redone to take into account the potential for higher, more frequent rainfall, and based on a 200-year flood event. The data considered as part of the hydrology study should be revisited and re-validated given the larger, more frequent storms that the area has recently experienced. Additionally, Young's Holdings believes that added drainage is necessary on the rear of the Panattoni Parcels which connects into the City's sewer system; the proposed single drain is not sufficient. Young's Holdings also requests that the City review and verify the proposed grading is sufficient to prevent flooding on the Young's Holdings Property; the City should consider requiring an increased slope at the rear of the Panattoni Parcels to capture potential water runoff.

Applicant Response: The preliminary hydrology study (Preliminary Hydrology Calculations prepared by Thienes Engineering, Inc. dated August 11, 2022) included as Appendix F to the IS/MND was prepared in accordance with the City of Tustin's engineering standards and design storm event (100 yr. storm) related to hydrology/drainage.

Additionally, a formal hydrology calculations report will be prepared during final design of the proposed project and processed through plan check by the City of Tustin for approval. Through plan check by the City, the proposed onsite drainage facilities and the associated hydrology calculations will be thoroughly reviewed to ensure the entire drainage system is in accordance with all applicable standards by the jurisdictions having authority.

Young's Holdings also contends that the City's proposed adoption of an MND is insufficient for the Entitlements. Specifically, an Environmental Impact Report ("EIR") is required to be prepared whenever there is a fair argument that a project may result in a potentially significant impact on the environment. (*Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602.) This standard effectuates the California Environmental Quality Act's ("CEQA") strong presumption in favor of environmental review and sets a low threshold for the preparation of an EIR. (*Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207.) Here, there is a fair argument that the Entitlements will result in potentially significant land use impacts, including substantial flooding of surrounding properties, and therefore the City is required to prepare an EIR prior to taking an action to approve the proposed Entitlements.



Applicant Response: Detailed technical studies analyzing the potential environmental impacts of the proposed project determined that all impacts would be less than significant either before or after mitigation, therefore an IS/MND is the appropriate environmental document consistent with CEQA, and an EIR is not required under CEQA. As discussed in Section 4.10, Hydrology and Water Quality of the IS/MND, the proposed project would comply with the City's requirements for detention and stormwater treatment and there would be no unavoidable significant impacts related to hydrology and water quality.

Under CEQA Guidelines Section 15384, argument, speculation, unsubstantiated opinion or narrative, evidence that is not credible, and evidence of social and economic impacts does not constitute substantial evidence. (Pala Band of Mission Indians v. County of San Diego (1998) 68 Cal.App.4th 556, 580.) While it is acknowledged that the commenter accurately states what the fair argument standard constitutes, here, neither this nor any other comment presents

substantial evidence of a fair argument that the project may cause a significant impact. Protect Niles v City of Fremont (2018) 25 CA5th 1129; Jensen v City of Santa Rosa (2018) 23 CA5th 877, 897. In the absence of substantial evidence provided in comments, an IS/MND is the proper means to evaluate a project under CEQA. Rominger v County of Colusa (2014) 229 CA4th 690.

Finally, Young's Holdings is submitting this objection letter after the MND comment period has closed because Young's Holdings just recently learned of the application from its tenant. The City did not properly provide notice to Young's Holdings of its consideration of the Entitlements, instead only sending notice to a tenant on the Property instead of the address of record for the Property's owner.

Applicant Response: The Applicant noticed all properties within a 300' radius in accordance with City of Tustin requirements. The City requires the Applicant to address the notice to the property owner at the "*mailing address of the subject property.*" Enclosed below is a screenshot from the City of Tustin – Instructions for Filing a Development Application Form (Link - Instructions for Filing a Dev. Application):

○ **Mailing Labels—300' Radius only**
Size: 8½" x 11" self-adhesive mailing label sheet
Quantity: Two (2) Sets
Contents: Mailing labels shall be prepared by a Title Company, or other authorized entity, within the last 30 days and contain the Assessor's Parcel Number, owner's name, and mailing address of the subject property and all properties within or partially within the specified radius of the subject property. The list must be typed or legibly printed on self-adhesive labels. The order of the labels on the sheet must be in numeric order by Assessor's Parcel Number.
Sample Label:

123-456-78
John Owner
12345 E Main Street
Tustin, CA 92780

Young's Holdings contends that the City's consideration of the Entitlements is premature and would violate state environmental laws. We urge the City to delay action on the Entitlements until such time as the City has undertaken a proper analysis of the hydrology and flooding impacts associated with the proposed development of the Panattoni Parcels, and in particular the evaluation of more recent data given the heavy rains experienced over the last year.

Applicant Response: As stated above, the project's impacts related to Hydrology and Water Quality were properly analyzed under CEQA within the circulated Initial Study/Mitigated Negative Declaration (IS/MND). Moreover, the formal Hydrology Study and plans detailing the proposed onsite drainage system will be plan checked by the City of Tustin for approval, prior to the City's issuance of the Grading Permit for the project.

Should the City continue to proceed with approving the Entitlements for the Panattoni Parcels, Young's Holdings reserves all its rights and remedies to challenge the City's actions.

Young's Holdings, Inc.

Air Quality Modeling Data

Myford Existing - Orange County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Myford Existing

Orange County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	62.51	1000sqft	1.43	62,506.00	0
Industrial Park	20.72	1000sqft	0.48	20,720.00	0
Manufacturing	22.74	1000sqft	0.52	22,740.00	0
Unrefrigerated Warehouse-No Rail	30.13	1000sqft	0.69	30,130.00	0
Parking Lot	176.86	1000sqft	4.06	176,860.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - existing site area

Construction Phase - existing only

Trips and VMT - Demolished material hauled to Frank R. Bowerman Landfill, approximately 7.9 miles from site.

Demolition -

Grading -

Vehicle Trips - existing land uses/trips

Construction Off-road Equipment Mitigation -

Myford Existing - Orange County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	5.00	1000sqft	0.11	5,000.00	0
Unrefrigerated Warehouse-No Rail	143.44	1000sqft	3.29	143,440.00	0
Parking Lot	164.22	1000sqft	3.78	164,220.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - building area

Construction Phase - anticipated schedule

Trips and VMT - Demolished material hauled to Frank R. Bowerman Landfill, approximately 7.9 miles from site.

Demolition -

Grading -

Vehicle Trips - Office = 928 daily passenger car trips, Warehouse = 28 daily truck trips

Construction Off-road Equipment Mitigation - SCAQMD Rule 403

Fleet Mix - office = passenger cars, warehouse = trucks

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	5.00	1000sqft	0.11	5,000.00	0
Unrefrigerated Warehouse-No Rail	143.44	1000sqft	3.29	143,440.00	0
Parking Lot	164.22	1000sqft	3.78	164,220.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - building area

Construction Phase - anticipated schedule

Trips and VMT - Demolished material hauled to Frank R. Bowerman Landfill, approximately 7.9 miles from site.

Demolition -

Grading -

Vehicle Trips - Office = 928 daily passenger car trips, Warehouse = 28 daily truck trips

Construction Off-road Equipment Mitigation - SCAQMD Rule 403

Fleet Mix - office = passenger cars, warehouse = trucks

Cultural Resources Records Search for the Myford II Warehouse Project, Tustin, Orange County, California

Dear Ms. Schooner:

This memo summarizes a cultural resources records search for the Myford II Warehouse Project (Project) located at 14321 and 14351 Myford Road, Tustin, Orange County, California. ASM Affiliates, Inc. (ASM) requested a search of existing records held by the South Central Coastal Information Center (SCCIC), part of the California Historical Resources Information System (CHRIS), which encompassed the Project area and a radius of 1 mi. around it. In addition, historic aerial photographs and historic USGS topographic maps of the Project area were analyzed. A request was also made for a search of the Native American Heritage Commission's (NAHC) Sacred Lands File. The SCCIC records search summary letter is included as Attachment A and the NAHC response will be provided upon receipt.

PROJECT DESCRIPTION

The Myford II warehouse project (proposed Project) is located in the City of Tustin (City) south of Interstate 5 (I-5), southeast of State Route 55 (SR 55), and northwest of State Route 261 (SR 261) as illustrated on the USGS Tustin, California 7.5-minute topographic quadrangle (Figure 1). The overall project site is located on approximately 7.18 acres on the west side of Myford Road between Walnut Avenue and Michelle Drive. The project site is located at 14321 and 14351 Myford Road in the City of Tustin, California, just west of the city's border with the City of Irvine. The project site is located in an infill industrial and commercial area and is bounded by commercial buildings to the north, west and south, and Myford Road to the east, within the Planned Community Industrial zoning designation (PC IND). The project site consists of two lots fronting onto Myford Road. The southernmost lot (14351 Myford Road) features an approximately 81,008 square foot office building and the northernmost lot (14321 Myford Road) features industrial building with a footprint of approximately 55,090 square feet. Both buildings are surrounded by asphalt pavement used for employee parking with outdoor storage located along the perimeter of the northernmost lot. Screening walls are located on the western perimeter and portions of the northern and southern perimeter of each lot. Onsite vegetation on both lots consists of landscaped ornamental vegetation found on the perimeter of the site and along the parking aisles.

RESULTS OF ARCHIVAL RESEARCH

SCCIC Records Search Results

The SCCIC records search was conducted to determine whether the Project area has been previously subject to survey as well as to detect the presence or absence of cultural resources previously documented within the Project area. The search included all records and documents on file with the SCCIC, as well as the National Register of Historic Places, the Office of Historic Preservation (OHP) Historic Property Directory, and the OHP Archaeological Determinations of Eligibility list.

A total of 56 previous reports were identified as a result of the records search (Table 1). Six of these encompassed all or a portion of the Project area, with one located just outside of the proposed Project parcel (bolded in Table 1 below). Three of the six reports are large-scale overviews that do not address the Project location specifically. As documented in report OR-01413, a portion of this project included survey of a small parcel just to the southwest of the proposed Project; this report had negative results and concluded that the area had a low prehistoric sensitivity. A small area within the proposed Project parcel was documented in OR-01662, while OR-04000 included a linear component adjacent to the eastern edge of the parcel; no resources were documented by either project within or near the Project parcel.

The search also revealed that six resources have been previously documented within the 1-mi. records search radius (Table 2). None of these resources are within or in direct proximity to the Project area.

Table 2. Resources Previously Recorded within the 1-Mile Records Search Radius

Primary # (P-30-)	Trinomial (CA-SBR-)	Date (Recorded by)	Description	Attribute Codes
001652	1652	2006 (C. Demcak, ARMC)	-	AP2. Lithic scatter; AP15. Habitation debris

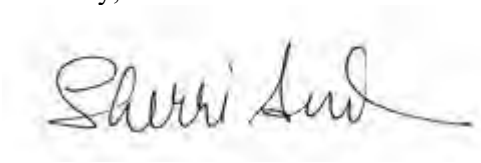
Tang, CRM Tech)	OHP Property Number - 144278; Atchison, Topeka & Santa Fe RR, Burlington Northern Santa Fe RR; Burlington Northern Santa Fe; Metrolink Railroad	HP37. Highway/trail; HP39. Other

Historical Imagery

Historical aerial photographs from 1946, 1952, 1963, 1972, 1980, 1985, 1992-2000, 2002-2005, 2009, 2010, 2012, 2014, 2016, and 2018 were analyzed on historicaerials.com, as were historical topographic maps dated 1896, 1899, 1901, 1907, 1915, 1925, 1932, 1935, 1945, 1950, 1957, 1962, 1967, 1975, 1982, 2012, 2015, and 2018.

Historical imagery provides minimal additional information regarding the use of the Project area over time. Michelle Drive appears on early topographic maps dating from 1896 with other roads not appearing in the area until 1932. No significant change is evident again until 1982 when Myford Road appears as well as a variety of structures throughout the area. Similarly, the aerials images show the Project area largely undeveloped until the 1980 image, which shows roads and structures as depicted on the topographic map, with minimal change to the most recent image taken in 2018.

NAHC Sacred Lands File Search



ASM requested for search of the Sacred Lands File (SLF) held by the California Native American Heritage Commission (NAHC) to supplement the SCCIC records search to inquire as to whether resources important to local Native American groups may exist within the proposed Project area that may not appear within the CHRIS system. The NAHC response has not yet been received; it will be provided upon receipt.

CONCLUSION

Review of the results of the SCCIC records search and historical imagery indicate that the Project location does not contain any nor has it contained any known historical properties as defined by CEQA. The results of prior studies encompassing and adjacent to the Project site suggest that the area overall has a low potential for containing previously undocumented archaeological or historical resources.

If you have any further questions or concerns, please do not hesitate to contact me.

Re: Records Search Results for the Panattoni 14351 Myford Project

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the Tustin, CA USGS 7.5' quadrangle. Due to the COVID-19 emergency, we have temporarily implemented new records search protocols. With the exception of some reports that have not yet been scanned, we are operationally digital for Los Angeles, Orange, and Ventura Counties. See attached document for your reference on what data is available in this format. The following reflects the results of the records search for the project area and a 1-mile radius:

As indicated on the data request form, the locations of resources and reports are provided in the following format: ☐ custom GIS maps ☒ shape files ☐ hand drawn maps

Resources within project area: 0	None
Resources within 1-mile radius: 6	SEE ATTACHED LIST
Reports within project area: 6	OR-00305, OR-01413, OR-01662, OR-02225, OR-02534, OR-04000
Reports within 1-mile radius: 56	SEE ATTACHED LIST

Resource Database Printout (list): ☒ enclosed ☐ not requested ☐ nothing listed
Resource Database Printout (details): ☐ enclosed ☒ not requested ☐ nothing listed
Resource Digital Database (spreadsheet): ☐ enclosed ☒ not requested ☐ nothing listed
Report Database Printout (list): ☒ enclosed ☐ not requested ☐ nothing listed
Report Database Printout (details): ☐ enclosed ☒ not requested ☐ nothing listed

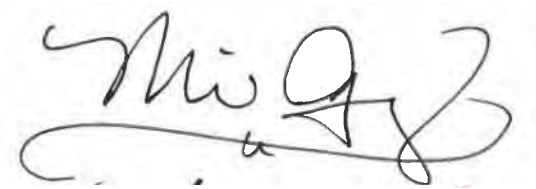
Archaeo Determinations of Eligibility 2012: ☐ enclosed ☐ not requested ☒ nothing listed

Historical Maps: ☒ enclosed ☐ not requested ☐ nothing listed
Ethnographic Information: ☒ not available at SCCIC
Historical Literature: ☒ not available at SCCIC
GLO and/or Rancho Plat Maps: ☒ not available at SCCIC
Caltrans Bridge Survey: ☒ not available at SCCIC; please go to http://www.dot.ca.gov/hq/structur/strmaint/historic.htm
Shipwreck Inventory: ☒ not available at SCCIC; please go to http://shipwrecks.slc.ca.gov/ShipwrecksDatabase/Shipwrecks_Database.asp
Soil Survey Maps: (see below) ☒ not available at SCCIC; please go to http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx



Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System,

Subject: Report of Geotechnical Investigation
Proposed Industrial Development
14321 and 14351 Myford Road (Myford II)
Tustin, California
GPI Project No. 3078.I

Dear Michael:

Transmitted herewith is an electronic copy of our report of geotechnical investigation for the subject project. The report presents our evaluation of the foundation conditions at the site and recommendations for design and construction.

Based on the results of our investigation, it is our opinion that from a geotechnical viewpoint it is feasible to develop the site as proposed. With remedial earthwork to overexcavate and recompact the existing fill soils and a portion of the upper natural soils, the proposed building can be supported on conventional shallow footings. The upper clay soils are very moist to wet, compressible, have a high potential for expansion, and we discuss remedial measures in the report for support of the foundations, floor slab, and hardscape. The moisture content of the upper soils is high, and wet soils are anticipated that will require drying prior to reuse as compacted fill. Subgrade stabilization may be required locally or in wet weather periods, but our experience at the adjacent site indicates that the in-place soils can support smaller rubber tire scrapers without yielding. Based on the shallow groundwater and clay soils, stormwater infiltration will not be feasible.

We appreciate the opportunity of offering our services on this project and look forward to seeing the project through its successful completion. Feel free to call us if you have any questions regarding our report or need further assistance.

Very truly yours,
Geotechnical Professionals Inc.

1.0 INTRODUCTION

1.1 GENERAL

This report presents the results of a geotechnical investigation performed by Geotechnical Professionals Inc. (GPI) for the proposed industrial development project at 14321 and 14351 Myford Road in Tustin, California. The geographical site location is shown on the Site Location Map, Figure 1. GPI conducted a site investigation and is providing field observations and testing during construction for the industrial development to the south of the site at 14451 Myford Road (GPI, 2021).

1.2 PROJECT DESCRIPTION

The proposed development is about 7.18 acres and will include a one-story, approximately 148,437 square-foot industrial building (both office and warehouse space) with associated parking and drives. The building will likely be of tilt-up concrete construction with a concrete slab-on-grade floor and truck loading docks on the north and south sides of the building. Structural loads were not available at the time this report was prepared. Based on our experience with similar projects, structural loads are anticipated to be up to 100 kips (columns) and 8 kips per lineal foot (walls).

The site plan (Scheme 13, dated August 9, 2022 by HPA Architecture) shows the proposed warehouse building located at the center of the site, with truck loading docks located on the west side of the building. Vehicle surface parking will be located at the east side of the site adjacent to Myford Road.

Grading plans are not yet available. We anticipate grades to be up to 3 feet above existing grades for the dock-high portion of the building, the proposed truck dock will be cut up to 4 feet below existing grades, and the remainder of the parking and landscape areas similar to existing grades with cuts and fills up to 2 feet.

The existing and proposed site configurations are shown on the Existing and Proposed Site Plans, Figures 2 and 3, respectively.

Our recommendations are based upon the above structural and grading information. We should be notified if the actual loads and/or grades change during the project design to either confirm or modify our recommendations.

1.3 PURPOSE OF INVESTIGATION

The primary purpose of this investigation and report is to provide an evaluation of the existing geotechnical and seismic conditions at the site, as they relate to the design and construction of the proposed development. More specifically, this investigation was aimed at providing geotechnical recommendations for earthwork and design of foundations and pavements.

2.0 SCOPE OF WORK

Our scope of work for this investigation consisted of a review of historical aerial photographs, geotechnical field exploration, laboratory testing, engineering analysis, and the preparation of this report.

Our geotechnical field exploration program consisted of five Cone Penetration Tests (CPT's) and six exploratory borings. The CPT's were advanced to depths ranging from 44 to 80 feet below existing site grades (CPT C-3 refused prematurely at a depth of 44 feet on dense subsurface soils, prior to the planned depth). The exploratory borings were drilled to depths of 21½ to 51½ feet below existing site grades. Details of the field procedures and logs of the CPT's and borings are presented in Appendices A and B, respectively. The locations of the subsurface explorations are shown on Figures 2 and 3.

Laboratory tests were performed on selected representative soil samples as an aid in soil classification and to evaluate the engineering properties of the soils. The geotechnical laboratory testing included determinations of moisture content and dry density, Atterberg Limits, shear strength (direct shear), consolidation, expansion index, compaction (maximum density/optimum moisture), and soil corrosivity. Laboratory testing procedures and results are summarized in Appendix C.

Soil corrosivity testing was performed by HDR under subcontract to GPI. Their test results are presented in Appendix C.

Engineering evaluations were performed to provide earthwork criteria, foundation and slab design parameters, preliminary pavement sections, and assessments of seismic hazards. The results of our evaluations are presented in the remainder of the report.

3.0 SITE CONDITIONS

3.1 SITE HISTORY

Our understanding of the development history of the site is based on a review of historical aerial photographs (Historic Aerials). Up to at least 1972, the subject site was undeveloped and likely used for agricultural purposes. By 1980, the buildings at each site are in-place, and the site remained relatively unchanged since.

3.2 SURFACE CONDITIONS

The site is bounded on the east by Myford Road, and existing industrial developments on the north, south, and west. The site to the south is under construction for Panattoni (Myford I). The existing site conditions are shown on the Existing Site Plan, Figure 2.

The existing site grades range from a high of about Elevation +70 feet at the northern property boundary to a low of about +64 feet at the southwestern property boundary. Overall, the site is relatively flat, with slopes typically less than or equal to 1 percent.

The pavement sections at our boring locations varied from about 4 to 6 inches of asphalt concrete over 4 to 6 inches of aggregate base, with two locations (west side of the existing northern building) consisting of 7 inches of portland cement concrete over 3 to 6 inches of aggregate base. The existing pavement is generally in good condition, with limited surficial cracking in the asphalt parking and drive areas. In the PCC pavement areas (north and west side of the northern building), we observed the pavement to be relatively new and in good condition.

3.3 SUBSURFACE SOILS

Our field investigation disclosed a subsurface profile consisting of undocumented fill overlying natural soils. Detailed descriptions of the subsurface conditions encountered are shown on the Logs of CPT's and Borings in Appendices A and B, respectively.

Fill soils, to depths of approximately 2 to 3 feet, were encountered in our exploratory borings. The undocumented fills consisted predominantly of silty clays with trace amounts of sand. We anticipate deeper undocumented fills may be encountered during grading within the limits of the existing buildings. The clayey fills were very moist to wet, with moisture contents ranging from 19 to 39 percent (roughly 3 to 23 percent above optimum).

The underlying natural soils consisted predominantly of firm to very stiff clays and silts with few deposits of sandy silts and sands with thin lenses of silty sands and sands throughout the profiles. We encountered significant calcium carbonate deposits in the natural fine grained soils. The moisture content of the soils within 10 feet of the ground surface is predominantly very moist to wet, varying from 13 to 41 percent, with an average moisture content of about 28 percent, approximately 12 percent above the optimum

moisture content. The upper natural materials exhibit low to moderate strength and moderate to high compressibility characteristics.

Our laboratory tests indicate the upper fill and natural soils to have medium to high potential for expansion (EIs ranging from 65 to 102). At an adjacent site, the expansion index of the upper soils was measured as high as 110 (very high). As such, the clays are anticipated to shrink and swell with changes in moisture content.

3.4 GROUNDWATER AND CAVING

Groundwater was encountered between depths of 20 to 25 feet in our recent explorations. We encountered groundwater at depths of 11 and 19 feet below the ground surface in our exploratory borings performed at the adjacent site to the south in 2019. Historical data provided by the California Geologic Survey (CGS) indicates that the shallowest depth to groundwater is approximately 12 to 13 feet below existing grades in the site vicinity (CGS, 1998).

Caving was not encountered in our 8-inch diameter hollow-stem borings. Based on the fines and moisture contents of the soils encountered, the caving potential of the upper soils is considered to be low, with the exception of the soils beneath the groundwater.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 GENERAL

Based on the results of our investigation, it is our opinion that from a geotechnical viewpoint it is feasible to develop the site as proposed. The proposed structure can be supported on shallow foundations following remedial grading to mitigate the geotechnical constraints discussed below. The most significant geotechnical issues that will affect the design and construction of the proposed structure are as follows:

- The undocumented fill and upper compressible natural soils are not considered to be suitable for uniform support of new foundations or floor slabs. We recommend the existing fill and upper compressible soils be removed and replaced as properly compacted fill. Details are presented in the “Earthwork” section of this report.

- Moisture contents of the near surface soils (immediately beneath the existing pavements to within 10 feet of the existing grades) are predominantly very moist to wet, averaging about 13 percent above the optimum moisture content. Therefore, active discing in favorable weather to dry these materials prior to placement as fill or backfill should be expected. In addition, the exposed subgrade soils will be well over the optimum moisture content. Although the in-place moisture contents would indicate that subgrade stabilization would be required to support rubber-tire compaction equipment, our experience at the adjacent site indicates that the in-place soils can support smaller rubber tire paddlewheel scrapers without stabilization. The earthwork contractor should evaluate the moisture content of the existing soils when planning the earthwork.

- The on-site soils consist predominantly of highly expansive clays. Retaining wall backfill and the soils placed within the upper 24 inches (18 inches if cement treated) of the finished subgrade in floor slab and within the upper 18 inches of finished subgrade in hardscape areas should consist of cement-treated on-site soils or granular, non-expansive import fills. If the site is designed to balance or has export, we anticipate cement-treatment of the building pad and hardscape subgrade surface is the more feasible mitigation option rather than importing non-expansive select fill to “cap” the building pad. Crushed aggregate base created from the site demolition may be used as select fill.

- Because of the elevated in-place moisture content of the upper site soils, earthwork operations in the rainy season will be difficult (high cost and low production). With favorable weather, we anticipate active mechanical drying using earthwork equipment such as a disc will be a feasible option to lower the soil moisture content. In the rainy season, we would anticipate significantly longer drying times or the need for drying with cement treatment.

- Static settlements of the proposed building were evaluated with respect to the anticipated foundation loads (maximum 100-kip column loads) and the placement of additional fill to raise the building pad above the existing grades (approximately 2 to 3 feet). For foundations, we estimate approximately 1-inch of static settlement under the more heavily loaded columns. When raising grades above the existing grade, we estimate an approximate settlement of ⅓-inch per foot of grade increase (i.e., raising grades by 3 feet will result in about 1 inch of areal settlement). Additional details are presented in the "Foundations" section of this report.

- Given the above settlement information, we recommend reinforcing the building floor slab. Also, we recommend that the placement of concrete within the pour strips along the wall footings and diamond block-outs around the columns be delayed as long as possible to allow settlement to occur before connecting the slab to walls or columns.

- The site is located in a seismic hazard zone for soil liquefaction. Based on our analyses, we computed potential seismic-induced liquefaction settlements of about ¼ to ½ inch. Dry seismic subsidence, unrelated to liquefaction, is estimated to be negligible due to the shallow groundwater depth and presence of clays.

- The upper very moist to wet, expansive clays will provide poor support for pavements, resulting in relatively thick sections and the need to underlay concrete with aggregate base. As an alternative, the pavement subgrade can be cement-treated to improve stability and allow thinner pavement sections.

- Corrosivity testing was performed on a representative sample obtained from our borings indicate a negligible level of soluble sulfate and chloride content with respect to concrete. Resistivity testing of the soils indicated they were considered to be corrosive to buried ferrous metals.

Our recommendations related to the geotechnical aspects of the development of the site are presented in the subsequent sections of this report.

4.2 SEISMIC CONSIDERATIONS

4.2.1 General

The site is located in a seismically active area of Southern California and is likely to be subjected to strong ground shaking due to earthquakes on nearby faults.

We assume the seismic design of the proposed development will be in accordance with the 2019 California Building Code (CBC) criteria. For the 2019 CBC, a Site Class D may be used. Using the Site Class, which is dependent on geotechnical issues, and the appropriate internet website (https://seismicmaps.org/), the corresponding seismic design parameters from the CBC are as follows:

S_S = 1.268g	$S_{MS} = F_a * S_S$ = 1.268g	S_{DS} = 2/3 * S_{MS} = 0.845g
S_1 = 0.454g	$S_{M1} = F_V * S_1$ = 0.840g	S_{D1} = 2/3 * S_{M1} = 0.560g

In accordance with the 2019 CBC, site-specific response spectra are required for structures located in a Site Class D (with S_1 greater than or equal to 0.2) unless, per the exceptions detailed in Section 11.4 8 of ASCE 7-16, the structure is designed using seismic response coefficient (Cs) determined by either:

- Equation 12.8-2 for values of $T \leq 1.5\ T_S$,
- 1.5 times the value computed by Equation 12.8-3 for values of $T_L \geq T > 1.5\ T_S$, or
- 1.5 times the value computed by Equation 12.8-4 for values of $T > T_L$.

If this exception is not taken and the structure will still be designed in accordance with the 2019 CBC, GPI should be notified that site-specific response spectra is requested. Based on the mapped seismic parameters, the T_S period is approximately 0.66 seconds (therefore $1.5*T_S$ is approximately 0.99 seconds).

The above seismic code values should be confirmed by the Project Structural Engineer using the value above and the pertinent internet website and tables from the building code. The Project Structural Engineer should also evaluate the period of the proposed structure with respect to the T_S value above when reviewing whether a site-specific response analysis will be requested.

4.2.2 Strong Ground Motion Potential

Based on published information (earthquake.usgs.gov), the most significant fault in the proximity of the site is the San Joaquin Hills Fault, which is located about 2¼ miles from the subject site.

During the life of the project, the site will likely be subject to strong ground motions due to earthquakes on nearby faults. Based on the OSHPD website (https://seismicmaps.org/), we computed that the site could be subjected to a peak ground acceleration (PGA_M) of 0.583g for a magnitude 7.2 earthquake (San Joaquin Hills). This acceleration has been computed using the mapped Maximum Considered Geometric Mean peak ground

acceleration from ASCE 7-16 (ASCE, 2017) and a site coefficient (F_{PGA}) based on site class. The predominant earthquake magnitude was determined using a 2-percent probability of exceedance in a 50-year period, or an average return period of 2,475 years. The structural design will need to incorporate measures to mitigate the effects of strong ground motion.

4.2.3 Potential for Ground Rupture

The site is not located within an Alquist-Priolo Special Studies Zone and there are no known faults crossing or projecting toward the site. Therefore, ground rupture due to faulting is considered unlikely at this site.

4.2.4 Liquefaction

Liquefaction is a phenomenon in which saturated cohesionless soils undergo a temporary loss of strength during severe ground shaking and acquire a degree of mobility sufficient to permit ground deformation. In extreme cases, the soil particles can become suspended in groundwater, resulting in the soil deposit becoming mobile and fluid-like. Liquefaction is generally considered to occur primarily in loose to medium dense deposits of saturated sandy soils. Thus, three conditions are required for liquefaction to occur: (1) a sandy soil of loose to medium density; (2) saturated conditions; and (3) rapid, large strain, cyclic loading, normally provided by earthquake motions.

The site is located within an area mapped by the State of California as having a potential for soil liquefaction (CGS, 1999). Groundwater was encountered as shallow as 20 feet in our most recent explorations, and as shallow as 11 feet in our recent exploratory borings for the adjacent site to the south. Historical groundwater levels at the site are estimated to be approximately 12 to 13 feet below the ground surface at the site. A groundwater depth of 11 feet was used in our evaluation.

Revisions to the 2019 California Building Code (CBC), ASCE 7-16, and Special Publication 117A (CGS, 2008) require that the ground motion used for this evaluation be based on the Peak Ground Acceleration (PGA_M) adjusted for site class effects. This value is computed using the mapped Maximum Considered Geometric Mean (MCE_G) peak ground acceleration for a Site Class D and a site coefficient, F_{PGA}. In accordance with the 2019 CBC, we considered a ground acceleration of 0.58g for a magnitude 7.2 earthquake (San Joaquin Hills) for our analyses, which corresponds to the PGA_M obtained using the methods described above.

The potential for liquefaction was evaluated using the methods presented by the NCEER (Youd, 1997) and Robertson (Robertson, 2009), with modifications provided in Special Publication 117A. Criterion for liquefaction susceptibility of the fine-grained soils was based on methods presented in Bray and Sancio (2006).

The materials encountered below the shallow groundwater depth of 11 feet consisted primarily of firm to very stiff clays with minor layers of medium dense to dense sands and silty sands.

Based on our evaluation, we estimate a potential for liquefaction induced settlement on the order of ¼ to ½ inch. The differential (across a 60-foot span) liquefaction-induced settlement is anticipated to be less than ¼ inch (angular distortion of 1/2880). The differential settlement across other spans can be extrapolated from the information provided.

4.2.5 Seismic Ground Subsidence

Seismic ground subsidence (not related to liquefaction induced settlements), occurs when loose, granular (sandy) soils above the groundwater are densified during strong earthquake shaking. The subsurface soils above the groundwater table were generally very moist to wet, firm to stiff clays and silts. If strong earthquake shaking occurs, the seismic ground subsidence (not related to liquefaction) is not anticipated to impact the site.

4.3 EARTHWORK

The earthwork anticipated at the project site will consist of clearing and grubbing, excavation of undocumented fills, loose natural soils and disturbed soils, subgrade preparation and stabilization, moisture conditioning of fill soils, and the placement and compaction of fill.

Earthwork operations in the rainy season will be difficult (high cost and low production) due to the elevated in-place moisture content of the upper site soils. With favorable weather, we anticipate active mechanical drying using earthwork equipment such as a disc may be a feasible option to lower the soil moisture content. In the rainy season, we would anticipate significantly longer drying times or the need for drying with cement treatment. Cement treatment may be considered as a potential alternative to mechanical drying regardless of weather conditions.

4.3.1 Clearing and Grubbing

Prior to grading, the areas to be developed should be stripped of vegetation and cleared of debris. Buried obstructions, such as footings, utilities, and tree roots should be removed. Deleterious material generated during the clearing operation should be removed from the site. The pavement sections across the site were relatively thick at our boring locations (average of 4¾ inches AC over 4½ inches AB) and demolition of the existing building will result in concrete debris. Inert demolition debris, such as concrete and asphalt, may be crushed for reuse in engineered fills in accordance with the criteria presented in the “Materials for Fill” section of this report.

If deeper excavations are required for the demolition of the existing development, they should be left open, documented with respect to depth and location, or backfilled under the observation of a GPI representative.

Although not encountered during our investigation, leach lines, cesspools or septic systems encountered during grading should be removed in their entirety. The resulting excavation should be backfilled as recommended in the “Subgrade Preparation” and

"Placement and Compaction of Fill" sections of this report. As an alternative, cesspools can be backfilled with lean sand-cement slurry.

At the conclusion of the clearing operations, a GPI representative should observe and accept the site prior to further grading.

4.3.2 Excavations

Excavations at this site will include removal of undocumented fill soils and upper compressible natural soils, footing excavations, and trenching for proposed utility lines.

Prior to placing fills or construction of the proposed building, undocumented fill and compressible natural soils occurring within the proposed building pad area should be removed and replaced as properly compacted fill. For planning purposes, removals for the building foundations should extend to depths of at least 5 feet below existing grades or 3 feet below the base of the planned foundations, whichever is deeper. Localized deeper removals may be required where deeper fills are encountered. Based on the provided preliminary plans, we anticipate that sufficient space is available for open-cut excavations.

For minor structures such as site walls, removals should extend at least 3 feet below the existing grade or 2 feet below the base of foundations, whichever is deeper. In proposed pavement and hardscape areas, the existing near-surface soils should be removed to a depth of 1 foot below existing grades or finished subgrade, whichever is deeper, moisture-conditioned (dried), and replaced as properly compacted fill. Deeper removals may be required where deeper disturbance of the soils is caused in demolishing the existing building.

The actual depths of removals should be determined in the field during grading by a representative of GPI.

The corners of the areas to be overexcavated should be accurately staked in the field by the Project Surveyor. The base of the excavations should extend laterally at least 5 feet beyond the outside edge of the perimeter foundations or a minimum distance equal to the depth of overexcavation/compaction below finish grade (i.e., a 1:1 projection below the top edge of footings), whichever is greater. This includes the footprint of the building and other foundation supported improvements, such as loading dock and site walls, trash enclosures, and canopies.

Where not removed by the aforementioned excavations, existing utility trench backfill within building areas should be removed and replaced as properly compacted fill. The limits of removal should be confirmed in the field. We recommend that known utilities be shown on the grading plan.

Temporary construction excavations may be made vertically without shoring to a depth of 4 feet below adjacent grade. For cuts up to 12 feet deep, the entire cut should be properly shored or sloped back to at least 1:1 or flatter. For cuts deeper than 12 feet, dewatering will likely be required, and the entire slope should be properly shored or sloped back at

least 1½:1 (horizontal to vertical) or flatter. Some raveling of the localized sandy deposits should be anticipated at the slope inclinations recommended. If raveling cannot be tolerated, flatter slope inclinations should be considered. The exposed slope face should be kept moist (but not saturated) during construction to reduce local sloughing.

In areas where removals are performed adjacent to property lines, existing streets, or other improvements where temporary slopes are not feasible, “ABC” slot cuts may be utilized instead of shoring. The slots should be no wider than 7 feet and no deeper than 8 feet, and should be backfilled immediately to finish grade prior to excavation of the adjacent two slots on each side. Where the localized sand and gravel deposits are encountered, narrower slots may be required. We should review the plans for excavation adjacent to property lines and existing improvements when they are developed.

Surcharge loads should not be permitted within a horizontal distance equal to the height of cut from the top of the excavation or 5 feet from the top of the slopes, whichever is greater, unless the cut is properly shored. Excavations that extend below an imaginary plane inclined at 45 degrees below the edge of adjacent existing site facilities should be properly shored to maintain support of adjacent elements. Excavations and shoring systems should meet the minimum requirements given in the State of California Occupational Safety and Health Standards.

4.3.3 Subgrade Preparation

The subgrade soils exposed at the base of the overexcavation will consist of wet (over-optimum) clays. Although the in-place moisture contents would indicate that subgrade stabilization would be required to support rubber-tire compaction equipment, our experience at the adjacent site indicates that the in-place soils can support smaller rubber tire paddlewheel scrapers without stabilization. The earthwork contractor should evaluate the moisture content of the existing soils when planning the earthwork.

Although not anticipated based on our adjacent site experience, if stabilization is required to achieve a firm and unyielding bottom to support the fill placement, stabilization can consist of either 18 inches of cement treatment, or 18 inches of crushed miscellaneous base (CMB) over a geogrid such as Tensar BX1100, or equivalent. Within the building pad, the stabilization method used should be consistent to provide uniformity in support of the foundations and floor slab. Outside the building pad, such as in pavement areas, the stabilization can consist of cement treatment and/or placement of aggregate base/geogrid.

For clarification, the cement treatment or CMB/geogrid stabilization options described above are in addition to the overexcavation depths detailed in Section 4.3.2 and are not considered a replacement for the recommended depths of properly compacted fill.

4.3.4 Material for Fill

The on-site soils are, in general, suitable for use as compacted fill. As previously noted, the on-site clays are highly expansive (EI of up to 102) and are expected to shrink and swell with changes in moisture content. As such, the on-site clays are not suitable for

placement beneath floor slabs or hardscape or used as retaining wall backfill. Based on the tested expansion index, we recommend either the soils within 24 inches of the finished subgrade in floor slab consist of select non-expansive soils as detailed below (including crushed inert debris generated from demolishing the existing building and pavements), or 18 inches of cement-treated on-site soils. Soils placed within 18 inches of hardscape subgrade should consist of either cement-treated on-site soils or select non-expansive soils. Retaining wall backfill should consist of imported select, granular soils. Based on our subsurface explorations, suitable granular material is not anticipated to be available within the anticipated over excavation depths.

The over-optimum clayey soils removed during overexcavation will need to be dried mechanically using active discing during warm, dry weather.

Imported fill material should be predominately granular (contain no more than 40 percent fines - portion passing No. 200 sieve) and non-expansive (E.I. less than 20). The import should also exhibit an R-value of at least 30 if used in proposed paved areas. GPI should be provided with a sample (at least 50 pounds) and notified of the location of soils proposed for import at least 72 hours prior to importing. Each proposed import source should be sampled, tested and accepted for use prior to delivery of the soils to the site. Soils imported prior to acceptance by GPI may be rejected if not suitable.

Both imported and existing on-site soils to be used as fill should be free of debris and pieces larger than 6 inches in greatest dimension.

If on-site concrete or asphalt concrete are crushed/pulverized to re-use as aggregate base for stabilizing wet, yielding subgrade, it should be crushed to maximum particle size of 3 inches. If used to support pavements, it should be crushed to meet the specifications of Class II or crushed miscellaneous base (CMB). If mixing with the on-site soils, we recommend the mixture consist of about 50 percent aggregate base and be well blended with the on-site soils using a disc or equivalent equipment.

4.3.5 Placement and Compaction of Fills

Fill soils should be placed in horizontal lifts, moisture-conditioned, and mechanically compacted to at least 90 percent of the maximum dry density in accordance with ASTM D 1557. Granular soils (if used) within the upper 1 foot of the pavement subgrade should be compacted to at least 95 percent. The optimum lift thickness will depend on the compaction equipment used and can best be determined in the field. The following uncompacted lift thickness can be used as preliminary guidelines.

Plate compactors	4-6 inches
Small vibratory or static rollers (5-ton)	6-8 inches
Scrapers, heavy loaders, and large vibratory rollers	8-12 inches

The maximum lift thickness should not be greater than 12 inches and each lift should be thoroughly compacted and accepted prior to subsequent lifts.

The moisture content of the existing near surface soils is well above the optimum moisture content. As such, the soils will require mixing and moisture conditioning (drying) prior to placement as properly compacted fill. With clear and dry weather conditions, it may be feasible to use a disc to mechanically dry the over-optimum soils. During the rainy season, significantly longer drying times will be required (high cost/low production). The moisture content of the clayey fill materials should be at least 3 percent over optimum moisture conditions at the time of compaction (1 to 3 percent over optimum for granular soils where placed).

During backfill of excavations, the fill should be properly benched into the construction slopes as it is placed in lifts. The moisture content of properly compacted soils should be maintained prior to covering or reprocessed and moisture conditioned immediately prior to covering.

Because of the expansiveness of the on-site soils, it will be important to maintain the elevated moisture contents in the compacted fill prior to covering. Soils that are allowed to dry out will require moisture conditioning that is likely to include reprocessing to introduce the moisture.

4.3.6 Cement Treatment

In areas where cement treatment of the soils is performed (subgrade stabilization, building pad subgrade, or pavement areas), we recommend the use of 5 percent cement by unit weight of soil (assume 125 pcf). The cement should be distributed across the soil using an appropriate mechanical spreader equipped with a self-contained vacuum system capable of capturing dust fines to minimize the spread of the cement outside the treated area. The cement, soil, and water should be mixed a minimum of two times using a four-wheel drive rotary mixer that can introduce water during mixing through a metering device. We recommend the moisture content of the cement-treated subgrade be within one percentage point below or two percentage points above the optimum content to ensure proper chemical action.

For the building pad subgrade or in pavement areas, the initial compaction of the cement-treated subgrade should be performed using a RexPactor 3-70 or equivalent, followed by final compaction using steel drum rollers. The final compaction should be performed within 2½ hours after the initial application of water during mixing. The cement-treated soils should be compacted to densities of at least 90 percent of the maximum dry density determined in accordance with ASTM D 1557. Following cement-treatment and compaction, construction traffic should be kept off of the subgrade for at least 72 hours, with the exception of maintaining a wet surface during the curing period.

We recommend the treatment should be performed by a subcontractor experienced with in-place cement treatment. Based on prior experience with similar projects, the cement-treatment specialty contractor should have performed a minimum of five comparable cement stabilization projects within the last 2 years.

4.3.7 Shrinkage and Subsidence

Shrinkage is the loss of soil volume caused by compaction of fills to a higher density than before grading. Subsidence is the settlement of in-place subgrade soils caused by loads generated by large earthmoving equipment. For the upper soils, an average shrinkage value of 15 to 20 percent and a subsidence of 0.2 feet may be assumed. These values are estimates only and exclude losses due to removal of vegetation or debris. Actual shrinkage and subsidence will depend on the types of earthmoving equipment used and should be determined during grading. The upper soils within the existing building pads may have been previously compacted, resulting in lower shrinkage values.

4.3.8 Trench/Wall Backfill

Utility trench and wall backfill should be mechanically compacted in lifts. The on-site clays are not suitable for use as retaining wall backfill. In addition, the moisture content of the upper clays is very moist to wet, and the soils will require drying before reusing as properly compacted fill. Lift thickness should not exceed those values given in the "Placement and Compaction of Fills" section of this report. Jetting or flooding of backfill materials should not be permitted. A representative of GPI should observe and test all trench and wall backfills as they are placed.

In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, sand-cement slurry may be substituted for compacted backfill. Slurry should also be used as backfill within the pipe zone for utilities that extend adjacent to and below building foundations. The slurry should contain 1½ sacks of cement per cubic yard and have a maximum slump of 5 inches. When set, such a mix typically has the consistency of compacted soil.

4.3.9 Observation and Testing

A representative of GPI should observe excavations, subgrade preparation, and fill placement activities. Sufficient in-place field density tests should be performed during fill placement and in-place compaction to evaluate the overall compaction of the soils. Soils that do not meet minimum compaction requirements should be reworked and tested prior to placement of any additional fill.

4.4 FOUNDATIONS

4.4.1 Foundation Type

The proposed structures may be supported on conventional isolated and/or continuous shallow footings, provided the subsurface soils are prepared in accordance with the recommendations given in this report. Footings should be supported on properly compacted fill.

4.4.2 Allowable Bearing Pressures

Based on the shear strength and elastic settlement characteristics of the recompacted on-site soils, a static allowable net bearing pressure of 2,500 pounds per square foot (psf) may be used for both continuous footings and isolated column building footings. These bearing pressures are for dead-plus-live-loads, and may be increased one-third for short-term, transient, wind and seismic loading. The actual bearing pressure used may be less than the value presented above and can be based on economics and structural loads to determine the minimum width for footings as discussed below. The maximum edge pressures induced by eccentric loading or overturning moments should not be allowed to exceed these recommended values.

For minor structures, such as site walls and property line screen walls, where reduced excavation depths have been recommended and lateral limits of the overexcavation may be limited, we recommend a maximum allowable bearing capacity of 1,500 pounds per square foot be used.

4.4.3 Minimum Footing Width and Embedment

The following minimum footing widths and embedments are recommended for the corresponding allowable bearing pressure.

STATIC BEARING PRESSURE (psf)	MINIMUM FOOTING WIDTH (inches)	MINIMUM FOOTING* EMBEDMENT (inches)
2,500	48	24
2,250	36	24
2,000	24	24
1,500	15	18

* Refers to minimum depth below lowest adjacent grade at the time of foundation construction. If interior footings are not fully loaded before the slab is in-place, the depth of interior footings may be taken from the top of the floor slab.

A minimum footing width of 15 inches should be used even if the actual bearing pressure is less than 1,500 psf. Because of the expansive nature of the on-site soils, we recommend a minimum footing depth of 18 inches.

4.4.4 Estimated Settlements

For the building foundation loads anticipated, total static settlement of the heavily loaded column footings (100 kips) is expected to be on the order of 1-inch. Maximum differential settlements between similarly loaded adjacent footings or along a 60-foot span of a continuous footing are expected to be about ½-inch (angular distortion of 1/1440). The differential settlement across other distances can be extrapolated based on the above recommendations.

Conceptual grading plans are not available at the time of this report. Due to soft, compressible soils at depth, if grades are going to be raised, we estimate an approximate settlement of ⅓-inch per foot of grade increase.

Potential seismic settlements presented in a previous section of this report should be added to these values when considering total settlements.

The above estimates assume that the recommended earthwork will be performed and that the footings will be sized in accordance with our recommendations.

Given the above anticipated settlements, we recommend that placement of concrete within the pour strips and diamond block-outs be delayed as long as possible (at least 30 days after loads are applied) to allow settlements to occur before connecting the floor slab to walls or columns.

4.4.5 Lateral Load Resistance

Soil resistance to lateral loads will be provided by a combination of frictional resistance between the bottom of footings and underlying soils and by passive soil pressures acting against the embedded sides of the footings. For frictional resistance, a coefficient of friction of 0.27 may be used for design. In addition, an allowable lateral bearing pressure equal to an equivalent fluid weight of 250 pounds per cubic foot may be used, provided the footings are poured tight against compacted fill soils.

For structures where lateral limits of the overexcavation may be limited, we recommend an allowable lateral bearing pressure equal to an equivalent fluid weight of 200 pounds per cubic foot be used. These values may be used in combination without reduction.

4.4.6 Foundation Concrete

Based on laboratory testing by HDR (Appendix C) soluble sulfate contents of a representative sample of the on-site soils were 615 mg/kg. For the 2019 CBC, foundation concrete should conform to the requirements outlined by ACI 318, Section 19.3 for a negligible level of soluble sulfate exposure for soil (Category S0). The chloride content of the sample tested was 41 mg/kg, which is considered to be low (Category C1).

4.4.7 Footing Excavation Observation

Prior to placement of steel and concrete, a representative of GPI should observe and approve footing excavations.

4.5 BUILDING FLOOR SLABS

Slab-on-grade floors should be supported on either 24 inches of granular (sandy) non-expansive, compacted soils or 18 inches of cement treated on-site soils as discussed in the “Material for Fill” section. The moisture content of the upper 24 inches of the compacted subgrade should be maintained at or above the optimum moisture content until covering.

The finished pad subgrade will either be cement-treated or consist of imported select soils and, as such, the potential of expansion of the finished subgrade will be minimal. We understand the floor slab is currently proposed to be a 7- or 8-inch thick and constructed with 4,000 psi concrete reinforced with #3 rebar spaced at 16 inches on center each way. From a geotechnical perspective, we take no exception to the floor slab design.

For elastic design of slabs-on-grade supporting sustained concentrated loads, a modulus of subgrade reaction (k) of 150 pounds per cubic inch (pounds per square inch per inch of deflection) may be used for imported granular soils. If the upper soils within the building pad are cement treated and properly compacted, a modulus of subgrade reaction (k) of 300 pounds per cubic inch may be used. The structural design should consider both long-term loads related to building operations and short-term construction loads.

Although not anticipated under most of the building, a vapor/moisture retarder should be placed under slabs that are to be covered with moisture-sensitive floor coverings (parquet, vinyl tile, etc.) or will be storing moisture sensitive supplies. Currently, common practice is to use a 15-mil polyolefin product such as Stego Wrap for this purpose. We take no exception if a sand layer is used above or below the vapor barrier as it is not a geotechnical issue, and is a decision of the Project Architect.

It should be noted that the material used as a vapor retarder is only one of several factors affecting the prevention of moisture accumulation under floor coverings. Other factors include maintaining a low water to cement ratio for the concrete used for the floor slab, effective sealing of joints and edges (particularly at pipe penetrations), as well as excess moisture in the concrete. The manufacturer of the floor coverings should be consulted for establishing acceptable criteria for the condition of floor surface prior to placing moisture-sensitive floor coverings.

4.6 RETAINING STRUCTURES AND SHORING

The following recommendations are provided for retaining walls less than 6 feet in retained height. We recommend that walls be backfilled with non-expansive (Expansion Index of 20 of less) granular (no more than 40 percent passing No. 200 U.S. standard sieve) soils. Based on our subsurface explorations, such material is not anticipated to be available within the upper 10 feet below existing grades. We anticipate import of select materials to be required, and the need for such materials should be noted on the project plans.

4.6.1 Retaining Walls

Active earth pressures can be used for designing walls that can yield at least ½-inch laterally in 10 feet of wall height under the imposed loads. For level backfill comprised of on-site or imported granular soils, the magnitude of active pressures is equivalent to the pressures imposed by a fluid weighing 35 pounds per cubic foot (pcf). This pressure may also be used for the design of temporary excavation support.

At-rest pressures should be used for restrained walls that remain rigid enough to be essentially non-yielding. At-rest pressures imposed by a fluid weighing 55 pounds per cubic foot should be used for drained granular backfill.

A seismic lateral earth pressure should be used for the design of retaining walls supporting 6 feet or more of backfill. We recommend a total lateral earth pressure of 55 pcf (active plus seismic). If walls are designed using the above at-rest pressure, total (static plus seismic) lateral earth pressure may be limited to that value.

Walls subject to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third and one-half the anticipated surcharge pressure for unrestrained and restrained walls, respectively. In addition to the recommended earth pressure, the upper 10 feet of retaining walls adjacent to streets should be designed to resist a uniform lateral pressure of 100 pounds per square foot (psf), acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If traffic is kept at least 10 feet from the walls, the traffic surcharge may be neglected.

The wall backfill should be well-drained to relieve possible hydrostatic pressure or designed to withstand these pressures. A drain consisting of perforated pipe and gravel wrapped in filter fabric should be used. One cubic foot of rock should be used for each lineal foot of pipe. The fabric (non-woven filter fabric, Mirafi 140N or equivalent) should be lapped at the top. We prefer pipe and gravel drains to weep holes to avoid potential for constant flow of surface water in front of the wall. For retaining walls constructed adjacent to temporary shoring, a composite geotextile drain may be used with a manifold-type collection drain at the base. In addition, “rock pockets” can be installed at the base of the shoring with a collection pipe extending from the “rock pocket” to the collection system. A representative of GPI should observe and approve wall drains prior to placement of wall backfill.

The Structural Engineer should specify the use of select, granular wall backfill on the plans. Wall footings should be designed as discussed in the "Foundations" section. Earthwork associated with the site walls should be performed as discussed in the “Earthwork” section.

4.6.2 Temporary Shoring

Where there is not sufficient space for sloped embankments, such as along the property limits or adjacent to existing structures, shoring will be required. One method of shoring would consist of steel soldier piles placed in drilled holes and backfilled with concrete. Driven or vibrated soldier piles may also be more economical alternative to drilled holes, and they can be used for supporting cuts that do not support existing structures. The presence of groundwater should be considered when evaluating the alternatives.

For cantilever shoring up to 10 feet in height with level backfill, the magnitude of active pressure is equivalent to the pressures imposed by a fluid weighing 35 pounds per cubic foot (pcf). The active pressure should be applied to the full embedment depth of the cantilever shoring.

In addition to the recommended earth pressure, the shoring should be designed for surcharge loads due the adjacent structures and construction traffic surcharge loads. The upper 10 feet of the shoring adjacent to streets should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pound per square foot surcharge behind the shoring due to normal street traffic. If traffic is kept at least 10 feet from the shoring, the traffic surcharge may be neglected. Existing adjacent structures will impart a surcharge load on shoring. The location and depth of the adjacent building footings, as well as the loading, will need to be determined to estimate the surcharge pressure on the shoring.

For design of soldier piles spaced at least two diameters on centers, the allowable lateral bearing value (passive value) of the soils below the excavation may be taken to be 500 pounds per square foot at the excavated surface, up to a maximum of 5,000 psf. These values can also be used to design a pile supported retaining wall, which we understand is being considered along the northern property line. To develop the full lateral value, provisions should be made to assure firm contact between the soldier piles and the undisturbed soils. The concrete placed in the soldier pile excavation below the excavated level may be a lean mix, but it should be of adequate strength to transfer the imposed loads to the surrounding soils.

The shoring contractor should evaluate the potential drilling conditions when planning the installation methods.

Driven or vibrated soldier piles may be a feasible and more economical alternative. If soldier piles are vibrated or driven, predrilling should not be allowed below the planned excavation level. Predrilling should be performed with a continuous flight auger capable of reversing the auger to minimize the removal of soil during the process. The diameter used for predrilling should not exceed 80 percent of the maximum depth of the soldier pile section. For design, the width of the driven or vibrated pile should be taken as the width of the flange.

Continuous lagging will be required between the soldier piles. Careful installation of the lagging will be necessary to achieve bearing against the retained earth. We recommend that the voids between the lagging and retained earth be backfilled with a lean-mix sand-cement slurry prior to continuing the excavation deeper. The soldier piles should be designed for the full anticipated lateral pressure. However, the pressure on the lagging will be less because of arching of the soils between piles. We recommend that the lagging be designed for the recommended earth pressure but limited to a maximum value of 400 pounds per square foot, provided the soldier beam spacing is 8 feet or less.

4.7 CORROSIVITY

A representative sample of the site’s soils indicates that they are corrosive to buried ferrous metals. Soil corrosion with regards to foundation concrete was addressed in a prior section of this report. GPI does not practice corrosion protection engineering. If corrosion protection recommendations are required, a corrosion engineer such as HDR should be consulted to provide recommendations to protect these elements from corrosion.

4.8 DRAINAGE

Positive surface gradients should be provided adjacent to structures to direct surface water run-off and roof drainage away from foundations and slabs toward suitable discharge facilities. Long-term ponding of surface water should not be allowed on pavements. We recommend that landscape planters be avoided immediately adjacent to the building. If planters are required, they should be provided with surface drains and planted with drought tolerant plants to reduce the potential for the infiltration of surface water beneath the building foundations and floor slab.

4.9 EXTERIOR CONCRETE AND MASONRY FLATWORK

The on-site clays have a high expansion index and are anticipated to shrink and swell in changes in moisture content. Exterior concrete and masonry flatwork should be supported on at least 18 inches of non-expansive, compacted fill or cement-treated treated soils. Prior to placement of concrete, the subgrade should be prepared as recommended in "Subgrade Preparation" section. The use of untreated clayey soils in the slab-subgrade should not be permitted.

We recommend the Project Civil Engineer design the concrete hardscape and sidewalks, including determination of thickness and reinforcing. For exterior flatwork, hardscape, and sidewalks, we recommend a minimum slab thickness of 4 inches with minimum slab reinforcement of No. 3 rebar placed at 16 inches on-center, in both directions. Control joints to direct shrinkage cracking in exterior slabs and sidewalks should be provided at maximum spacing of 8 and 6 feet on center in two directions, respectively. Where flatwork is planned at building entries, we recommend it be structurally connected to the perimeter building foundation to reduce the potential differential settlement at this joint. These recommendations should be considered as minimums based on the geotechnical site conditions, and the Project Civil Engineer should confirm if more stringent recommendations are needed for other purposes.

4.10 PAVED AREAS

Based on the soils encountered in our explorations and R-value testing of the onsite soils at the adjacent site, we used an R-value of 10 for design to allow for some variability in the exposed conditions. The California Division of Highways Design Method was used for design of the recommended preliminary pavement sections. These recommendations assume that the pavement subgrades will consist of existing near surface soils. The following pavement sections are recommended for typical distribution center traffic uses and untreated, on-site clay subgrade:

UNTREATED SUBGRADE SOIL

PAVEMENT AREA	TRAFFIC INDEX	SECTION THICKNESS (inches)	
		ASPHALT/PORTLAND CONCRETE	AGGREGATE BASE COURSE
Asphalt Concrete			
Automobile Parking	4.0	3.0	7.0
Automobile Drives	5.5	3.5	10.0
Truck Drives	7.0	4.0	15.0
Heavy Truck Apron	8.0	5.0	16.0
Portland Cement Concrete			
Automobile Parking	4.0	7.0	4.0
Automobile Drives	5.5	7.5	4.0
Truck Drives/Loading Dock Apron	7.0	8.0	4.0
Heavy Truck Apron	8.0	8.5	4.0

To improve the pavement support characteristics of the on-site clays resulting in thinner pavement sections, cement treatment can be performed. We recommend that cement treatment in pavement areas consist of a treatment depth of at least 12 inches and 5 percent cement by unit-weight of soil (assumed 125 pcf). The following pavement sections are recommended for typical distribution center traffic uses and cement-treated subgrade soil:

CEMENT-TREATED SUBGRADE SOIL

PAVEMENT AREA	TRAFFIC INDEX	SECTION THICKNESS (inches)	
		ASPHALT/PORTLAND CONCRETE	AGGREGATE BASE COURSE
Asphalt Concrete			
Automobile Parking	4.0	3.0	4.0
Automobile Drives	5.5	3.0	6.0
Truck Drives	7.0	3.5	9.0
Heavy Truck Apron	8.0	4.0	10.0
Portland Cement Concrete			
Automobile Parking	4.0	6.0	---
Automobile Drives	5.5	6.5	---
Truck Drives/Loading Dock Apron	7.0	7.0	---
Heavy Truck Apron	8.0	7.5	---

The concrete used for paving should have a modulus of rupture of at least 490 psi (equivalent to an approximate compressive strength of 3,000 psi at the time the pavement is subjected to traffic).

The pavement subgrade underlying the aggregate base should be properly prepared and compacted in accordance with the recommendations outlined under "Subgrade Preparation". If desired, we can evaluate the use of cement treatment of pavement subgrade to provide thinner pavement sections and more moisture resistant subgrade conditions beneath the pavement.

The pavement base course should be compacted to at least 95 percent of the maximum dry density (ASTM D 1557). Aggregate base should conform to the requirements of Section 26 of the California Department of Transportation Standard Specifications for

Class II aggregate base (three-quarter inch maximum) or Section 200-2 of the Standard Specifications for Public Works Construction (Green Book) for untreated base materials (except processed miscellaneous base).

Cement-treatment of the subgrade will create a rigid section that is prone to developing shrinkage cracks. The cracks can cause stress concentrations in the asphalt surface and the development of reflective cracking in the asphalt. Placing a flexible material, like an aggregate base course, between the treated subgrade and asphalt pavement will provide stress relief and help minimize reflective cracking. We also recommend “micro-cracking” the cement-treated subgrade to provide a more flexible subgrade section and reduce the potential for reflective cracking. Micro-cracking is the process by which minute, subsurface cracks are generated in the cement-treated subgrade and is achieved by loading the cement-treated subgrade within 30 to 72 hours after initial cure and completion of compaction. The implementation of micro-cracking will help to minimize the development of shrinkage cracks while not impacting the pavement’s overall structural capacity. Additional details on the micro-cracking process can be found in Section 301-3.4.13 of the 2018 Standard Specifications or Public Works Construction (Green Book).

The above recommendations assume that the base course and compacted subgrade will be properly drained. The design of paved areas should incorporate measures to prevent moisture build-up within the base course which can otherwise lead to premature pavement failure. For example, curbing adjacent to landscaped areas should be deep enough to act as a barrier to infiltration of irrigation water into the adjacent base course.

4.11 SUBSURFACE INFILTRATION

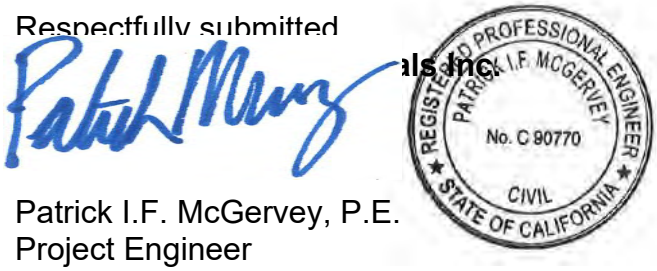
Current regulations require that storm water be infiltrated into the site soils of new developments, when possible. The soil types present at the site control the ability of water to infiltrate into the subgrade. Based upon our subsurface investigation, the subsurface natural soils underlying the site consist predominately of very moist to wet clays, which typically are inadequate to accept infiltration.

Due to the presence of clayey soils and shallow groundwater, infiltration of stormwater is not considered feasible for the site.

4.12 GEOTECHNICAL OBSERVATION AND TESTING

We recommend that a representative of GPI observe the earthwork during construction to confirm that the recommendations provided in our report are applicable during construction. The earthwork activities include grading, compaction of fills, subgrade preparation, pavement construction and foundation excavations. If conditions are different than expected, we should be afforded the opportunity to provide an alternate recommendation based on the actual conditions encountered.

5.0 LIMITATIONS



The report, exploration logs, and other materials resulting from GPI's efforts were prepared exclusively for use by B8 Myford II Industrial Owner LLC and Panattoni Development Company, Inc. and their consultants in designing the proposed development. The report is not intended to be suitable for reuse on extensions or modifications of the project or for use on any project other than the currently proposed development, as it may not contain sufficient or appropriate information for such uses. If this report or portions of this report are provided to contractors or included in specifications, it should be understood that they are provided for information only. This report cannot be utilized by another entity without the express written permission of GPI. This report is an instrument of our services and remains the property of GPI.

Soil deposits may vary in type, strength, and many other important properties between points of exploration due to non-uniformity of the geologic formations or to man-made cut and fill operations. While we cannot evaluate the consistency of the properties of materials in areas not explored, the conclusions drawn in this report are based on the assumption that the data obtained in the field and laboratory are reasonably representative of field conditions and are conducive to interpolation and extrapolation.

Furthermore, our recommendations were developed with the assumption that a proper level of field observation and construction review will be provided during grading, excavation, and foundation construction by GPI. If field conditions during construction appear to be different than is indicated in this report, we should be notified immediately so that we may assess the impact of such conditions on our recommendations. If construction phase services are performed by others, they must accept full responsibility (as Project Geotechnical Engineer) for all geotechnical aspects of the project, including this report.

Our investigation and evaluations were performed using generally accepted engineering approaches and principles available at this time and the degree of care and skill ordinarily exercised under similar circumstances by reputable Geotechnical Engineers practicing in this area. No other representation, either expressed or implied, is included or intended in our report.

Respectfully submitted,
Geotechnical Professionals Inc.

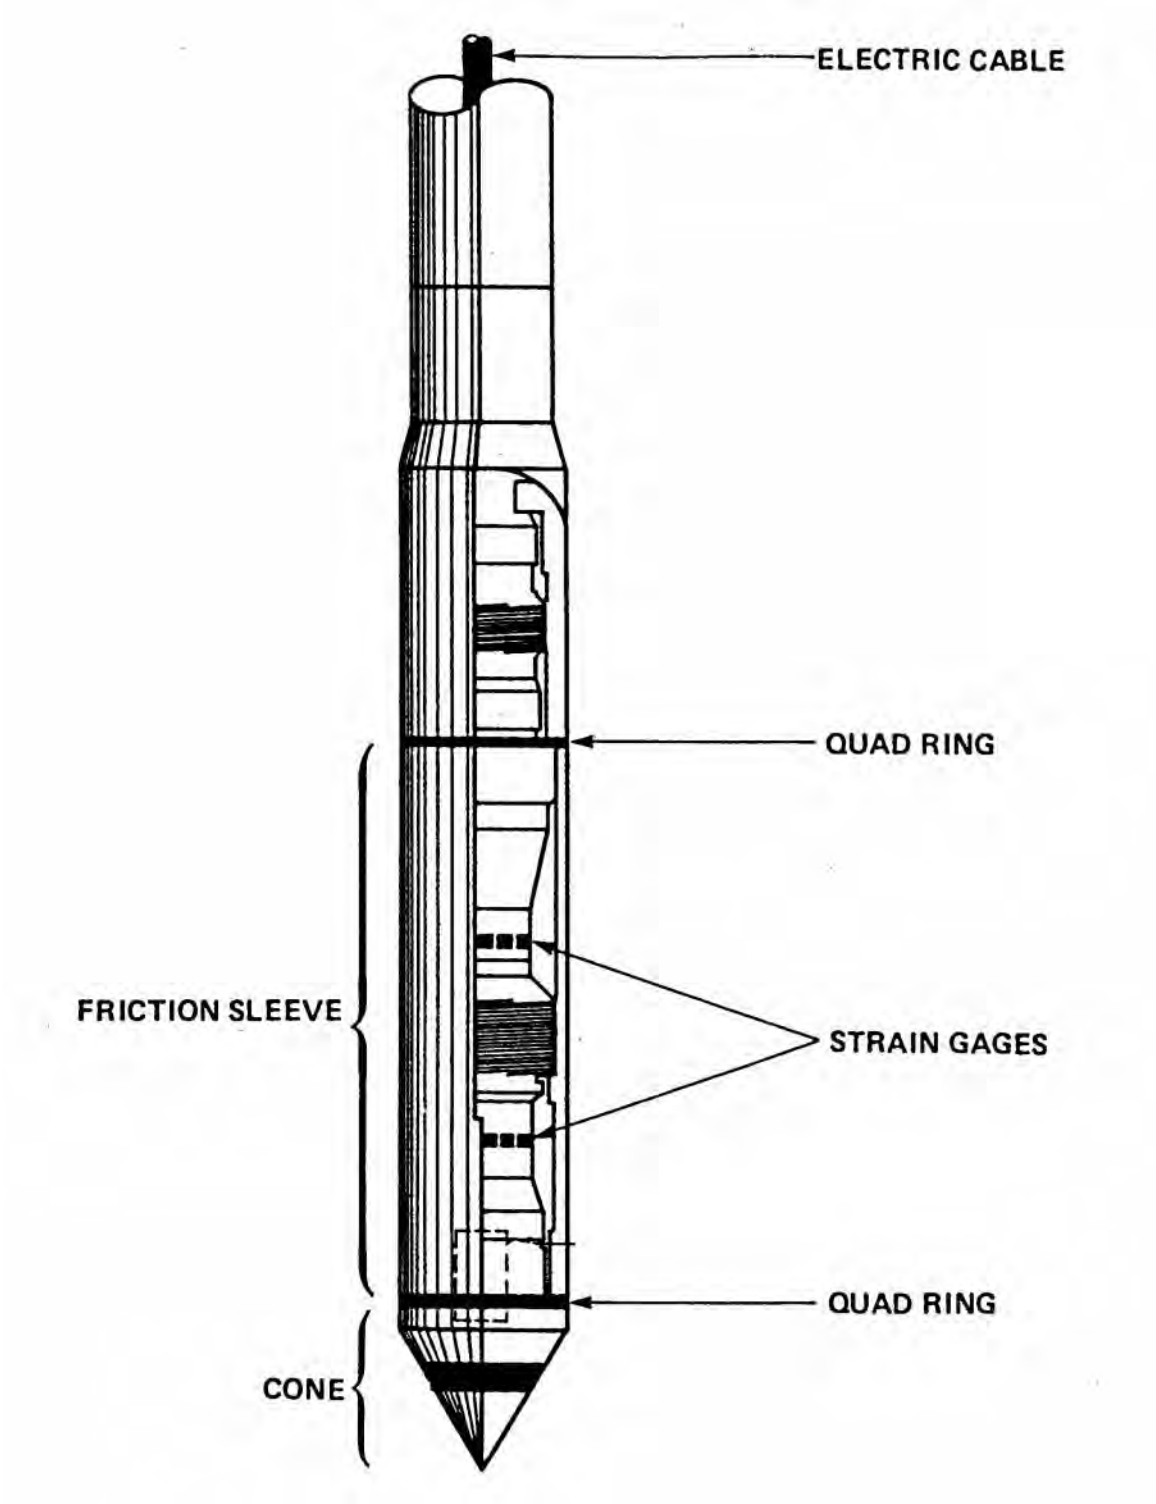
APPENDIX A

APPENDIX A

CONE PENETRATION TESTS

The subsurface conditions were investigated by performing five Cone Penetration Tests (CPT's) at the site. The soundings were advanced to depths of 44 to 80 feet below existing grades, with one CPT refusing at a depth of 44 feet on dense subsurface soils prior to the planned depth. The locations of the CPT's are shown on the Existing and Proposed Site Plans, Figures 2 and 3, respectively.

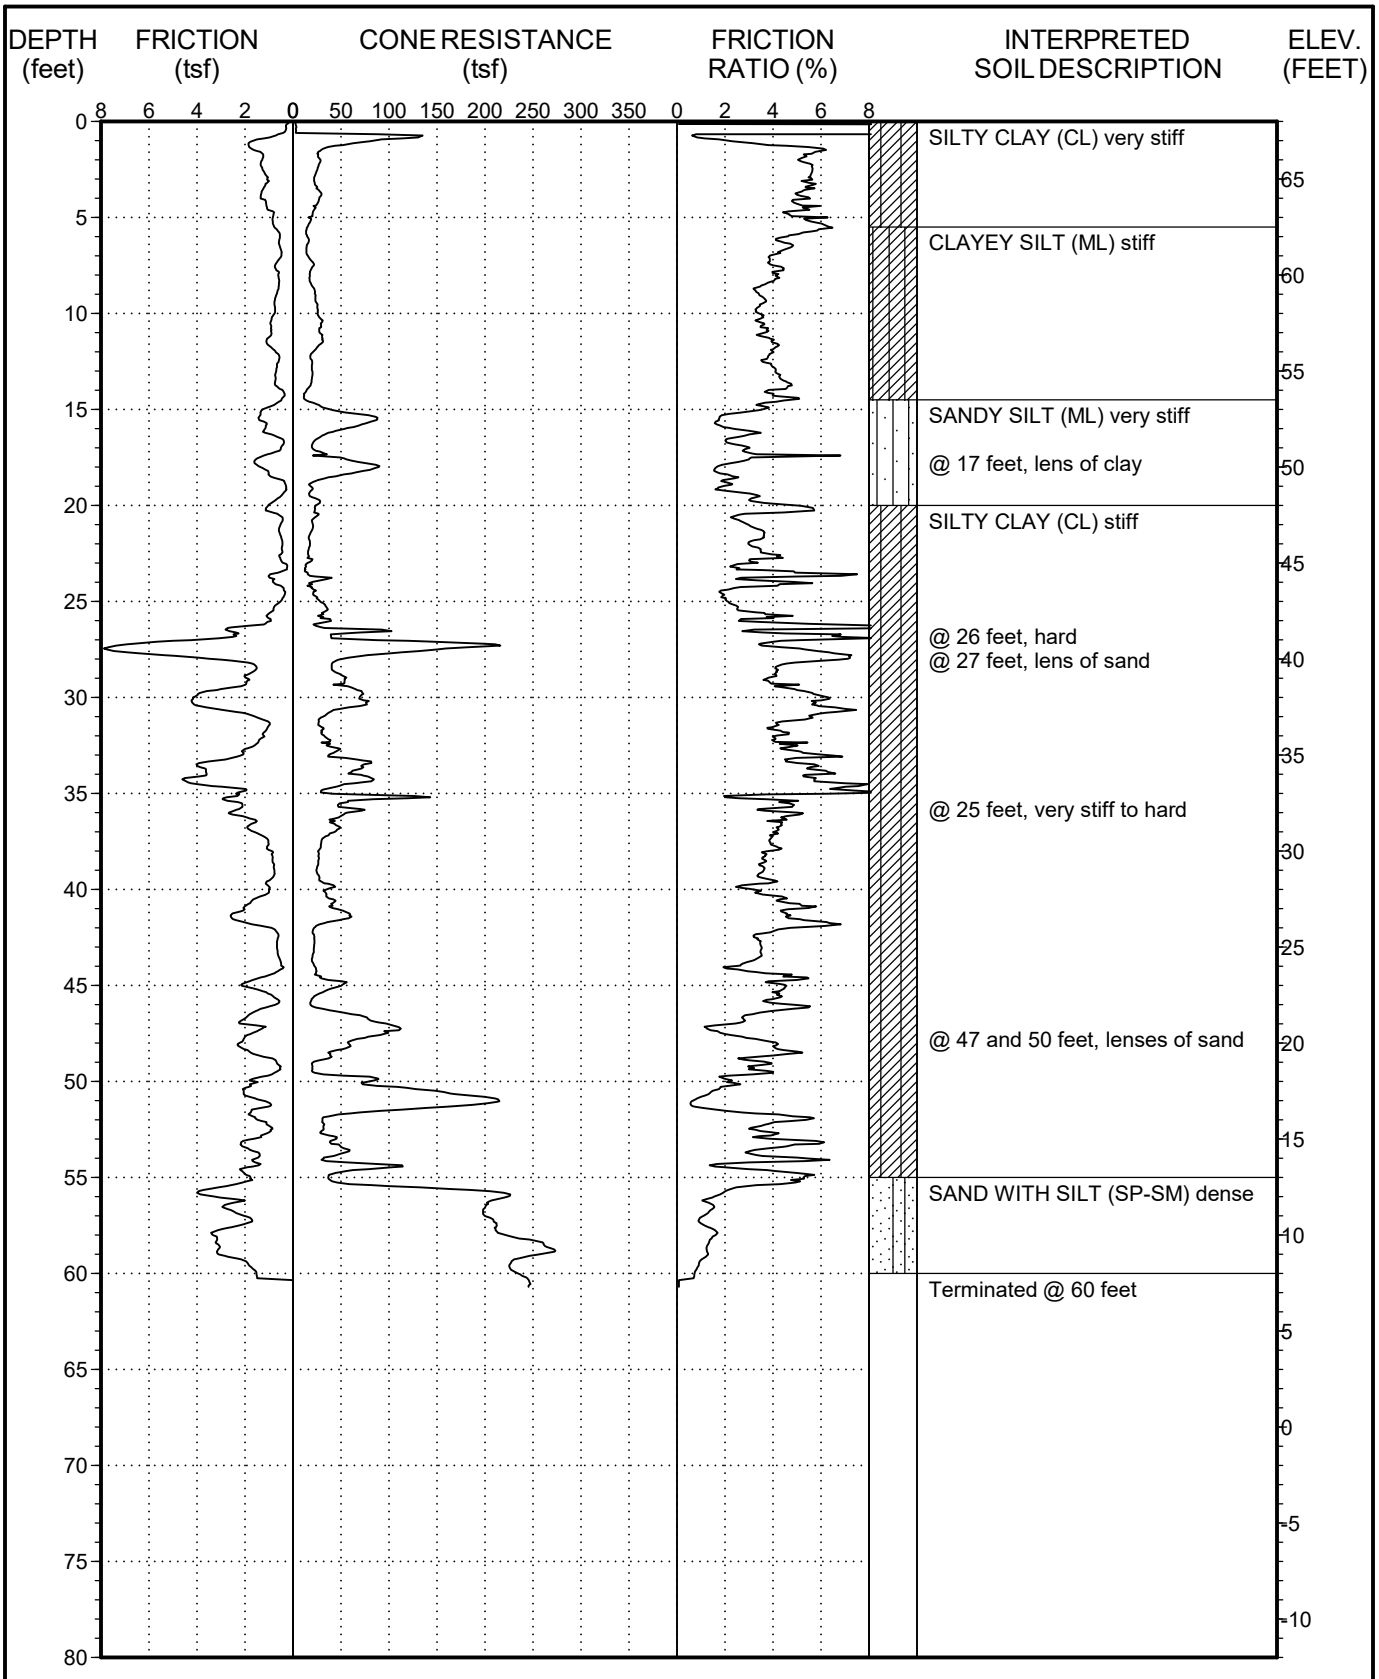


The Cone Penetration Test consists of pushing a cone-tipped probe into the soil deposit while simultaneously recording the cone tip resistance and side friction resistance of the soil to penetration (refer to Figure A-1). The CPT's described in this report were conducted in general accordance with ASTM specifications (ASTM D 5778) using an electric cone penetrometer.

The CPT equipment consists of a cone assembly mounted at the end of a series of hollow sounding rods. A set of hydraulic rams is used to push the cone and rods into the soil while a continuous record of cone and friction resistance versus depth is obtained in both analog and digital form at the ground surface. A specially designed truck is used to transport and house the test equipment and to provide a 30-ton reaction to the thrust of the hydraulic rams.

Data obtained during a CPT consists of continuous stratigraphic information with close vertical resolution. Stratigraphic interpretation is based on relationships between cone tip resistance and friction resistance. The calculated friction ratio (CPT friction sleeve resistance divided by cone tip resistance) is used as an indicator of soil type. Granular soils typically have low friction ratios and high cone resistance, while cohesive or organic soils have high friction ratios and low cone resistance. These stratigraphic material categories form the basis for all subsequent calculations, which utilize the CPT data.

Computer plots of the reduced CPT data acquired for this investigation are presented in Figures A-2 to A-6 of this appendix. The field testing and computer processing for the current investigation was performed by Kehoe Testing under subcontract to Geotechnical Professionals Inc. (GPI). The interpreted soil descriptions were prepared by GPI.



The CPT locations were laid out in the field by measuring from existing features at the site. The ground surface elevations at the CPT locations were estimated from Google Earth and should be considered approximate.

EXPLORATORY BORINGS

The subsurface conditions at the site were investigated by drilling and sampling six exploratory borings. The borings were advanced to depths of about 21½ to 51½ feet below the existing ground surface. The exploration location is shown on the Existing and Proposed Site Plans, Figures 2 and 3, respectively.

The borings were drilled using truck-mounted hollow-stem auger equipment. Relatively undisturbed samples were obtained using a brass-ring lined sampler (ASTM D 3550). The brass-rings have an inside diameter of 2.42 inches. The ring samples were driven into the soil by a 140-pound hammer dropping 30 inches. The number of blows needed to drive the sampler into the soil was recorded as the penetration resistance.

At selected locations, disturbed samples were obtained using a split-spoon sampler by means of the Standard Penetration Test (SPT, ASTM D 6066). The spoon sampler was driven into the soil by a 140-pound hammer dropping 30 inches, employing two turns of rope around the cathead. After an initial seating drive of 6 inches, the number of blows needed to drive the sampler into the soil a depth of 12 inches was recorded as the penetration resistance. These values are the raw uncorrected blowcounts.

The field explorations for the investigation were performed under the continuous technical supervision of GPI's representative, who visually inspected the site, maintained detailed logs of the borings, classified the soils encountered, and obtained relatively undisturbed samples for examination and laboratory testing. The soils encountered in the borings were classified in the field and through further examination in the laboratory in accordance with the Unified Soils Classification System. Detailed logs of the borings are presented in Figures B-1 to B-6 in this appendix.

The boring location was laid out in the field by measuring from existing features at the site. Upon completion, the boring was backfilled with the excavated soil cuttings. Excess soil cuttings were drummed, tested, and disposed of offsite. The ground surface elevations at the boring locations were estimated from Google Earth and should be considered approximate.

APPENDIX C

APPENDIX C

LABORATORY TESTS

INTRODUCTION

Representative undisturbed soil samples, tube samples and bulk samples were carefully packaged in the field and sealed to prevent moisture loss. The samples were then transported to our Cypress office for examination and testing assignments. Laboratory tests were performed on selected representative samples as an aid in classifying the soils and to evaluate the physical properties of the soils affecting foundation design and construction procedures. Detailed descriptions of the laboratory tests are presented below under the appropriate test headings. Test results are presented in the figures that follow.

MOISTURE CONTENT AND DRY DENSITY

Moisture content and dry density were determined from a number of the ring samples from the borings. The samples were first trimmed to obtain volume and wet weight and then were dried in accordance with ASTM D 2216. After drying, the weight of each sample was measured, and moisture content and dry density were calculated. Moisture content and dry density values are presented on the boring logs in Appendix B.

ATTERBERG LIMITS

Liquid and plastic limits were determined for selected samples in accordance with ASTM D4318. Results of the Atterberg Limits test are summarized on Figure C-1.

DIRECT SHEAR

Direct shear tests were performed on undisturbed and remolded bulk samples in accordance with ASTM D 3080. The bulk samples were remolded to approximately 90 percent of the maximum dry density. The test specimens were placed in the shear machine, and a normal load comparable to the in-situ overburden stress was applied. The samples were inundated, allowed to consolidate, and then were sheared to failure at a strain rate of 0.0007 inches per minute. The tests were repeated on additional test specimens under increased normal loads. Shear stress and sample deformation were monitored throughout the tests. The results of the direct shear tests are presented in Figures C-2 to C-4.

CONSOLIDATION

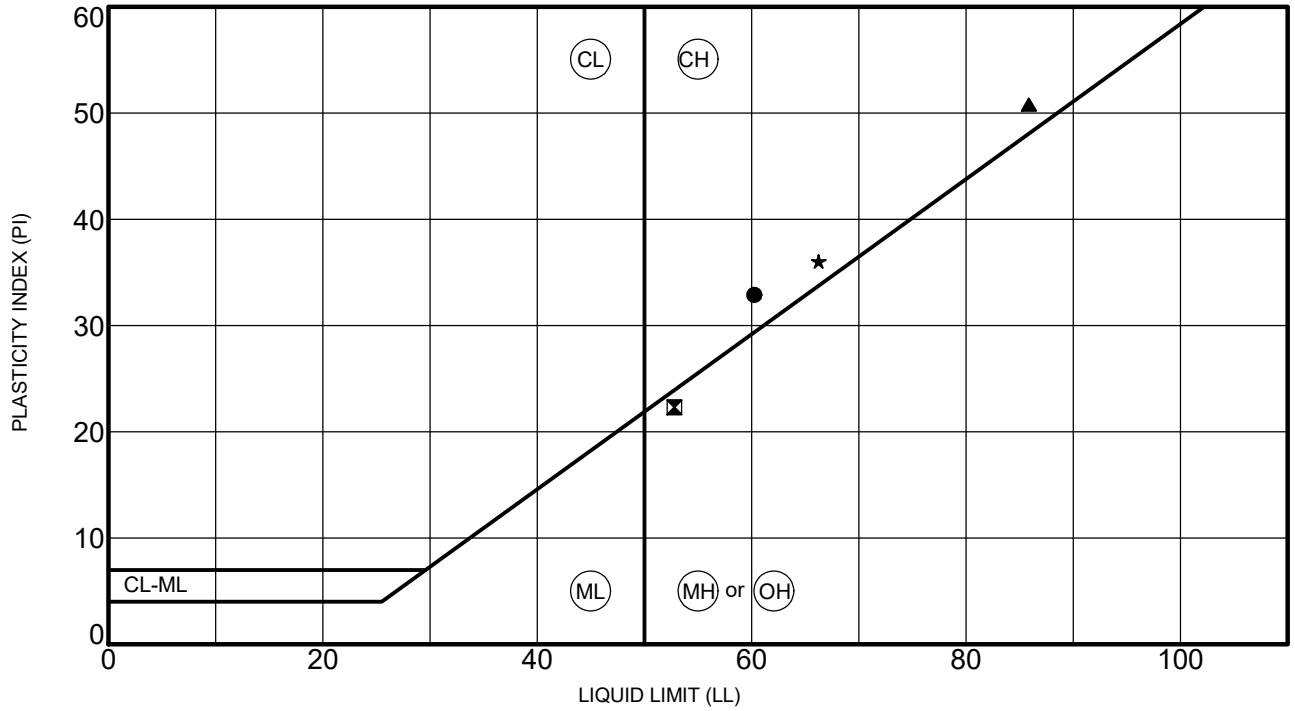
One-dimensional consolidation tests were performed on undisturbed samples in accordance with ASTM D 2435. After trimming the ends, the samples were placed in the consolidometer and loaded to up to either 0.4 or 0.5 ksf. Thereafter, the samples were incrementally loaded to a maximum load of up to either 25.6 or 34.1 ksf. The samples were inundated at either 1.6 or 2 ksf. Sample deformation was measured to 0.0001 inch. Rebound behavior was investigated by unloading the sample back to either 0.4 or 0.5 ksf.

Results of the consolidation tests, in the form of percent consolidation versus log pressure are presented in Figures C-5 to C-7.

COMPACTION TEST

A maximum dry density/optimum moisture tests was performed in accordance with ASTM D 1557 on a representative bulk sample of the site soils. The test result are as follows:

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	OPIMUM MOISTURE (%)	MAXIMUM DRY DENSITY (pcf)
B-2	0 – 5	Silty Clay (CH)	15.5	108



EXPANSION INDEX

Expansion index tests were performed on bulk samples. The tests were performed in accordance with ASTM 4829 to assess the expansion potential of the on-site soils. The results of the tests are summarized below:

BORING NO.	DEPTH (ft)	SOIL DESCRIPTION	EXPANSION INDEX
B-2	0 – 5	Silty Clay (CH)	65
B-3	0 – 5	Silty Clay (CH)	89
B-5	0 – 5	Silty Clay (CH)	102

CORROSIVITY

Soil corrosivity testing was performed by HDR on a soil sample provided by GPI. The test results are summarized in Table 1 of this Appendix.

1 INTRODUCTION

This report documents the results of a Greenhouse Gas (GHG) Emissions Assessment completed for the Myford II Project (Project). The purpose of this GHG Emissions Assessment is to evaluate the potential construction and operational emissions associated with the Project and determine the level of impact the Project would have on the environment.

1.1 Project Location

The proposed Project is located at 14321 and 14351 Myford Road in the City of Tustin (City), California, just west of the City's border with the City of Irvine. The City is in central Orange County, bordered by the cities of Irvine and Santa Ana to the west; the City of Orange and unincorporated County of Orange areas to the north; and on the east by the City of Irvine and unincorporated County of Orange territory (see Figure 1: Regional Vicinity and Figure 2: Site Vicinity).

The site is occupied by two existing industrial/office buildings totaling 136,098 square feet and is bounded by commercial buildings to the north, west and south, and Myford Road to the east, within the Planned Community Industrial (PC IND) zoning designation. Regional access to the site is provided by State Route 261 (SR-261) freeway, located approximately 0.3 miles east of the Project site, the Interstate 5 (I-5) freeway, located approximately 0.7 miles north of the site, and State Route 55 (SR-55) freeway located approximately 3 miles west of the site.

1.2 Project Description

The proposed Myford II Project is comprised of one warehouse distribution building totaling approximately 148,437 square feet with office space, parking, and landscaping on approximately 7.18 net acres as shown in Figure 3: Site Plan. Access to the site would be provided via three driveways on Myford Road.

Warehouse Facility

The proposed Project is currently planned as a "speculative building." Therefore, the future tenant(s) or buyer(s) of the building are not currently known. The proposed Project consists of a logistics warehouse building of approximately 148,437-square feet on approximately 7.18 acres. The warehouse Project would include 143,437 square feet of warehouse space and approximately 5,000-square feet of office space, in addition to other associated facilities and improvements, such as a perimeter fencing, parking, onsite and perimeter landscaping, lighting, and exterior sidewalks.

Site Access

Vehicular and truck site access is provided via three driveways off southbound Myford Road ranging size from 27' to 35'. The Project driveways will only service the Project. The drive aisles located on both the north and south of the building will be 35 feet wide.

Parking

Parking would be located along the east and west perimeters of the site. The proposed Project goes would provide 103 automobile parking stalls and 19 dock doors. The dock doors will be oriented to face west. Daily activities within the Project site will include maneuvering forklifts, lift equipment, and large semi-trucks through and around the site and backing into the loading docks, all of which emit warning (high pitch beep beep) sounds consistent with the Occupational Safety and Health Administration (OSHA) requirements.

2 ENVIRONMENTAL SETTING

2.1 Greenhouse Gases and Climate Change

Certain gases in the earth's atmosphere classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth.

The primary GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Examples of fluorinated gases include chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), and nitrogen trifluoride (NF_3); however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of GHGs exceeding natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the Earth's climate, known as global climate change or global warming.

GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants (TACs), which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of a GHG molecule is dependent on multiple variables and cannot be pinpointed, more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms of carbon sequestration. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere[1]. Table 1: Description of Greenhouse Gases describes the primary GHGs attributed to global climate change, including their physical properties.

[1] Intergovernmental Panel on Climate Change, *Carbon and Other Biogeochemical Cycles. In: Climate Change 2013: The Physical Science Basis*, *Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013. http://www.climatechange2013.org/ images/report/WG1AR5_ALL_FINAL.pdf.

Table 1: Description of Greenhouse Gases

Greenhouse Gas	Description
Carbon Dioxide (CO_2)	CO_2 is a colorless, odorless gas that is emitted naturally and through human activities. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, and industrial facilities. The atmospheric lifetime of CO_2 is variable because it is readily exchanged in the atmosphere. CO_2 is the most widely emitted GHG and is the reference gas (Global Warming Potential of 1) for determining Global Warming Potentials for other GHGs.
Nitrous Oxide (N_2O)	N_2O is largely attributable to agricultural practices and soil management. Primary human-related sources of N_2O include agricultural soil management, sewage treatment, combustion of fossil fuels, and adipic and nitric acid production. N_2O is produced from biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years. The Global Warming Potential of N_2O is 298.
Methane (CH_4)	CH_4, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Methane is the major component of natural gas, about 87 percent by volume. Human-related sources include fossil fuel production, animal husbandry, rice cultivation, biomass burning, and waste management. Natural sources of CH_4 include wetlands, gas hydrates, termites, oceans, freshwater bodies, non-wetland soils, and wildfires. The atmospheric lifetime of CH_4 is about 12 years and the Global Warming Potential is 25.
Hydrofluorocarbons (HFCs)	HFCs are typically used as refrigerants for both stationary refrigeration and mobile air conditioning. The use of HFCs for cooling and foam blowing is increasing, as the continued phase out of CFCs and HCFCs gains momentum. The 100-year Global Warming Potential of HFCs range from 124 for HFC-152 to 14,800 for HFC-23.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above Earth's surface. Because of this, they have long lifetimes, between 10,000 and 50,000 years. Two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Global Warming Potentials range from 6,500 to 9,200.
Chlorofluorocarbons (CFCs)	CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. They are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). CFCs were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. The Montreal Protocol on Substances that Deplete the Ozone Layer prohibited their production in 1987. Global Warming Potentials for CFCs range from 3,800 to 14,400.
Sulfur Hexafluoride (SF_6)	SF_6 is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas. The Global Warming Potential of SF_6 is 23,900.
Hydrochlorofluorocarbons (HCFCs)	HCFCs are solvents, similar in use and chemical composition to CFCs. The main uses of HCFCs are for refrigerant products and air conditioning systems. As part of the Montreal Protocol, HCFCs are subject to a consumption cap and gradual phase out. The United States is scheduled to achieve a 100 percent reduction to the cap by 2030. The 100-year Global Warming Potentials of HCFCs range from 90 for HCFC-123 to 1,800 for HCFC-142b.
Nitrogen Trifluoride (NF_3)	NF_3 was added to Health and Safety Code section 38505(g)(7) as a GHG of concern. This gas is used in electronics manufacture for semiconductors and liquid crystal displays. It has a high global warming potential of 17,200.

3 REGULATORY SETTING

3.1 Federal

To date, national standards have not been established for nationwide GHG reduction targets, nor have any regulations or legislation been enacted specifically to address climate change and GHG emissions reduction at the project level. Various efforts have been promulgated at the federal level to improve fuel economy and energy efficiency to address climate change and its associated effects.

Energy Independence and Security Act of 2007

The Energy Independence and Security Act of 2007 (December 2007), among other key measures, requires the following, which would aid in the reduction of national GHG emissions:

- Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel in 2022.
- Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct the National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
- Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

U.S. Environmental Protection Agency Endangerment Finding

The U.S. Environmental Protection Agency (EPA) authority to regulate GHG emissions stems from the U.S. Supreme Court decision in *Massachusetts v. EPA* (2007). The Supreme Court ruled that GHGs meet the definition of air pollutants under the existing Federal Clean Air Act (FCAA) and must be regulated if these gases could be reasonably anticipated to endanger public health or welfare. Responding to the Court's ruling, the EPA finalized an endangerment finding in December 2009. Based on scientific evidence it found that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6) constitute a threat to public health and welfare. Thus, it is the Supreme Court's interpretation of the existing FCAA and the EPA's assessment of the scientific evidence that form the basis for the EPA's regulatory actions.

Federal Vehicle Standards

In response to the U.S. Supreme Court ruling discussed above, Executive Order 13432 was issued in 2007 directing the EPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.

In 2010, an Executive Memorandum was issued directing the Department of Transportation, Department of Energy, EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of CO_2 in model year 2025, on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021, and NHTSA intends to set standards for model years 2022–2025 in a future rulemaking. On January 12, 2017, the EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks. It should be noted that the U.S. EPA in 2019 proposed to freeze the vehicle fuel efficiency standards at their planned 2020 level (37 mpg), canceling any future strengthening (currently 54.5 mpg by 2026). However, this proposal was scrapped in December 2021, and the current finalized rule calls for vehicles in model years 2023-2026 to reduce their greenhouse gas emissions between 5% and 10% each year. This means that by 2026, cars will be required to achieve 40 miles per gallon.

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for CO_2 emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the EPA, this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines.

In August 2016, the EPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program will apply to vehicles with model year 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks. The final standards are expected to lower CO_2 emissions by approximately 1.1 billion metric tons and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program.

In 2018, the President and the U.S. EPA stated their intent to halt various federal regulatory activities to reduce GHG emission, including the phase two program. California and other states have stated their intent to challenge federal actions that would delay or eliminate GHG reduction measures and have committed to cooperating with other countries to implement global climate change initiatives. On September 27, 2019, the U.S. EPA and the NHTSA published the "Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program." (84 Fed. Reg. 51,310 (Sept. 27, 2019.) The Part One Rule revokes California's authority to set its own GHG emissions standards and set zero-emission vehicle mandates in California. On March 31, 2020, the U.S. EPA and NHTSA finalized rulemaking for SAFE Part Two sets CO_2 emissions standards and corporate average fuel economy (CAFE) standards for passenger vehicles and light duty trucks, covering model years 2021-2026. The current U.S. EPA administration has repealed SAFE Rule Part One, effective January 28, 2022 and is reconsidering Part Two.

Clean Power Plan and New Source Performance Standards for Electric Generating Units

On October 23, 2015, the EPA published a final rule (effective December 22, 2015) establishing the carbon pollution emission guidelines for existing stationary sources: electric utility generating units (80 Federal Register [FR] 64510–64660), also known as the Clean Power Plan (CPP). These guidelines prescribe how states must develop plans to reduce GHG emissions from existing fossil-fuel-fired electric generating units.

The guidelines establish CO_2 emission performance rates representing the best system of emission reduction for two subcategories of existing fossil-fuel-fired electric generating units: one fossil-fuel-fired electric utility steam-generating unit and two stationary combustion turbines. Concurrently, the EPA published a final rule (effective October 23, 2015) establishing standards of performance for GHG emissions from new, modified, and reconstructed stationary sources: electric utility generating units (80 FR 64661–65120). The rule prescribes CO_2 emission standards for newly constructed, modified, and reconstructed affected fossil-fuel-fired electric utility generating units. The U.S. Supreme Court stayed implementation of the CPP pending resolution of several lawsuits. Additionally, in March 2017, the federal government directed the EPA Administrator to review the CPP to determine whether it is consistent with current executive policies concerning GHG emissions, climate change, and energy. On January 13, 2021 EPA finalized its revised NSPS for new power plants that abandoned the earlier proposal of increasing the limits on CO_2 emissions. However, the final rule contains a new restriction that Section 111 can only be used to regulate greenhouse gases from stationary sources if the source category is responsible for at least 3 percent of U.S. greenhouse gas emissions. Other sectors that are currently regulated under the Clean Air Act (such as oil and gas facilities) could be affected, and the rule could bind the EPA from issuing future GHG emissions on new stationary sources.

3.2 State of California

California Air Resources Board

The California Air Resources Board (CARB) is responsible for the coordination and oversight of State and local air pollution control programs in California. Various statewide and local initiatives to reduce California's contribution to GHG emissions have raised awareness about climate change and its potential for severe long-term adverse environmental, social, and economic effects. California is a significant emitter of CO_2 equivalents (CO_2e) in the world and produced 459 million gross metric tons of CO_2e in 2013. In the State, the transportation sector is the largest emitter of GHGs, followed by industrial operations such as manufacturing and oil and gas extraction.

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation, such as the landmark Assembly Bill (AB) 32, *California Global Warming Solutions Act of 2006*, was specifically enacted to address GHG emissions. Other legislation, such as Title 24 building efficiency standards and Title 20 appliance energy standards, were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major provisions of the legislation.

Assembly Bill 32 (California Global Warming Solutions Act of 2006)

AB 32 instructs the CARB to develop and enforce regulations for the reporting and verification of statewide GHG emissions. AB 32 also directed CARB to set a GHG emissions limit based on 1990 levels, to be achieved by 2020. It set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner.

CARB Scoping Plan

CARB adopted the Scoping Plan to achieve the goals of AB 32. The Scoping Plan establishes an overall framework for the measures that would be adopted to reduce California's GHG emissions. CARB determined that achieving the 1990 emissions level would require a reduction of GHG emissions of

approximately 29 percent below what would otherwise occur in 2020 in the absence of new laws and regulations (referred to as "business-as-usual")[2]. The Scoping Plan evaluates opportunities for sector-specific reductions, integrates early actions and additional GHG reduction measures by both CARB and the State's Climate Action Team, identifies additional measures to be pursued as regulations, and outlines the adopted role of a cap-and-trade program[3]. Additional development of these measures and adoption of the appropriate regulations occurred through the end of 2013. Key elements of the Scoping Plan include:

- Expanding and strengthening existing energy efficiency programs, as well as building and appliance standards.
- Achieving a statewide renewables energy mix of 33 percent by 2020.
- Developing a California cap-and-trade program that links with other programs to create a regional market system and caps sources contributing 85 percent of California's GHG emissions (adopted in 2011).
- Establishing targets for transportation-related GHG emissions for regions throughout California and pursuing policies and incentives to achieve those targets (several sustainable community strategies have been adopted).
- Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, heavy-duty truck measures, the Low Carbon Fuel Standard (amendments to the Pavley Standard adopted 2009; Advanced Clean Car standard adopted 2012), goods movement measures, and the Low Carbon Fuel Standard (adopted 2009).
- Creating targeted fees, including a public goods charge on water use, fees on gasses with high global warming potential, and a fee to fund the administrative costs of the State of California's long-term commitment to AB 32 implementation.
- The California Sustainable Freight Action Plan was developed in 2016 and provides a vision for California's transition to a more efficient, more economically competitive, and less polluting freight transport system. This transition of California's freight transport system is essential to supporting the State's economic development in coming decades while reducing pollution.
- CARB's Mobile Source Strategy demonstrates how the State can simultaneously meet air quality standards, achieve GHG emission reduction targets, decrease health risk from transportation emissions, and reduce petroleum consumption over the next fifteen years. The mobile Source Strategy includes increasing ZEV buses and trucks.

In 2012, CARB released revised estimates of the expected 2020 emissions reductions. The revised analysis relied on emissions projections updated in light of current economic forecasts that accounted for the economic downturn since 2008, reduction measures already approved and put in place relating to future fuel and energy demand, and other factors. This update reduced the projected 2020 emissions from 596

[2] CARB defines business-as-usual (BAU) in its Scoping Plan as emissions levels that would occur if California continued to grow and add new GHG emissions but did not adopt any measures to reduce emissions. Projections for each emission-generating sector were compiled and used to estimate emissions for 2020 based on 2002–2004 emissions intensities. Under CARB's definition of BAU, new growth is assumed to have the same carbon intensities as was typical from 2002 through 2004.

[3] The Climate Action Team, led by the secretary of the California Environmental Protection Agency, is a group of State agency secretaries and heads of agencies, boards, and departments. Team members work to coordinate statewide efforts to implement global warming emissions reduction programs and the State's Climate Adaptation Strategy.

million metric tons of CO_2e ($MMTCO_2e$) to 545 $MMTCO_2e$. The reduction in forecasted 2020 emissions means that the revised business-as-usual reduction necessary to achieve AB 32's goal of reaching 1990 levels by 2020 is now 21.7 percent, down from 29 percent. CARB also provided a lower 2020 inventory forecast that incorporated State-led GHG emissions reduction measures already in place. When this lower forecast is considered, the necessary reduction from business-as-usual needed to achieve the goals of AB 32 is approximately 16 percent.

CARB adopted the first major update to the Scoping Plan on May 22, 2014. The updated Scoping Plan summarizes the most recent science related to climate change, including anticipated impacts to California and the levels of GHG emissions reductions necessary to likely avoid risking irreparable damage. It identifies the actions California has already taken to reduce GHG emissions and focuses on areas where further reductions could be achieved to help meet the 2020 target established by AB 32.

In 2016, the Legislature passed Senate Bill (SB) 32, which codifies a 2030 GHG emissions reduction target of 40 percent below 1990 levels. With SB 32, the Legislature passed companion legislation, AB 197, which provides additional direction for developing the Scoping Plan. On December 14, 2017 CARB adopted a second update to the Scoping Plan[4]. The 2017 Scoping Plan details how the State will reduce GHG emissions to meet the 2030 target set by Executive Order B-30-15 and codified by SB 32. Other objectives listed in the 2017 Scoping plan are to provide direct GHG emissions reductions; support climate investment in disadvantaged communities; and, support the Clean Power Plan and other Federal actions.

Senate Bill 32 (California Global Warming Solutions Act of 2006: Emissions Limit)

Signed into law in September 2016, SB 32 codifies the 2030 GHG reduction target in Executive Order B-30-15 (40 percent below 1990 levels by 2030). The bill authorizes CARB to adopt an interim GHG emissions level target to be achieved by 2030. CARB also must adopt rules and regulations in an open public process to achieve the maximum, technologically feasible, and cost-effective GHG reductions.

SB 375 (The Sustainable Communities and Climate Protection Act of 2008)

Signed into law on September 30, 2008, SB 375 provides a process to coordinate land use planning, regional transportation plans, and funding priorities to help California meet the GHG reduction goals established by AB 32. SB 375 requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, aligns planning for transportation and housing, and creates specified incentives for the implementation of the strategies.

AB 1493 (Pavley Regulations and Fuel Efficiency Standards)

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the EPA's denial of an implementation waiver. The EPA subsequently granted the requested waiver in 2009, which was upheld by the by the U.S. District Court for the District of Columbia in 2011. The regulations establish one set of emission standards for model years 2009–2016 and a second set of emissions standards for model years 2017 to 2025. By 2025, when all rules will be fully implemented, new automobiles will emit 34 percent fewer CO_2e emissions and 75 percent fewer smog-forming emissions.

[4] California Air Resources Board, *California's 2017 Climate Change Scoping Plan,* November 2017.

SB 1368 (Emission Performance Standards)

SB 1368 is the companion bill of AB 32, which directs the California Public Utilities Commission (CPUC) to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 limits carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. The new law effectively prevents California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. The CPUC adopted the regulations required by SB 1368 on August 29, 2007. The regulations implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, for 1,100 pounds of CO_2 per megawatt-hour.

SB 1078 and SBX1-2 (Renewable Electricity Standards)

SB 1078 requires California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 changed the due date to 2010 instead of 2017. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, which established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Executive Order S-21-09 also directed CARB to adopt a regulation by July 31, 2010, requiring the State's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010 by Resolution 10-23. SBX1-2, which codified the 33 percent by 2020 goal.

SB 350 (Clean Energy and Pollution Reduction Act of 2015)

Signed into law on October 7, 2015, SB 350 implements the goals of Executive Order B-30-15. The objectives of SB 350 are to increase the procurement of electricity from renewable sources from 33 percent to 50 percent (with interim targets of 40 percent by 2024, and 25 percent by 2027) and to double the energy efficiency savings in electricity and natural gas end uses of retail customers through energy efficiency and conservation. SB 350 also reorganizes the Independent System Operator to develop more regional electricity transmission markets and improve accessibility in these markets, which will facilitate the growth of renewable energy markets in the western United States.

AB 398 (Market-Based Compliance Mechanisms)

Signed on July 25, 2017, AB 398 extended the duration of the Cap-and-Trade program from 2020 to 2030. AB 398 required CARB to update the Scoping Plan and for all GHG rules and regulations adopted by the State. It also designated CARB as the statewide regulatory body responsible for ensuring that California meets its statewide carbon pollution reduction targets, while retaining local air districts' responsibility and authority to curb toxic air contaminants and criteria pollutants from local sources that severely impact public health. AB 398 also decreased free carbon allowances over 40 percent by 2030 and prioritized Cap-and-Trade spending to various programs including reducing diesel emissions in impacted communities.

SB 150 (Regional Transportation Plans)

Signed on October 10, 2017, SB 150 aligns local and regional GHG reduction targets with State targets (i.e., 40 percent below their 1990 levels by 2030). SB 150 creates a process to include communities in

discussions on how to monitor their regions' progress on meeting these goals. The bill also requires the CARB to regularly report on that progress, as well as on the successes and the challenges regions experience associated with achieving their targets. SB 150 provides for accounting of climate change efforts and GHG reductions and identify effective reduction strategies.

SB 100 (California Renewables Portfolio Standard Program: Emissions of Greenhouse Gases)

Signed into Law in September 2018, SB 100 increased California's renewable electricity portfolio from 50 to 60 percent by 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

Executive Orders Related to GHG Emissions

California's Executive Branch has taken several actions to reduce GHGs using executive orders. Although not regulatory, they set the tone for the State and guide the actions of state agencies.

Executive Order S-3-05

Executive Order S-3-05 was issued on June 1, 2005, which established the following GHG emissions reduction targets:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Executive Order S-01-07

Issued on January 18, 2007, Executive Order S 01-07 mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. The executive order established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. CARB adopted the LCFS on April 23, 2009.

Executive Order S-13-08

Issued on November 14, 2008, Executive Order S-13-08 facilitated the California Natural Resources Agency development of the 2009 California Climate Adaptation Strategy. Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order S-14-08

Issued on November 17, 2008, Executive Order S-14-08 expands the State's Renewable Energy Standard to 33 percent renewable power by 2020. Additionally, Executive Order S-21-09 (signed on September 15, 2009) directs CARB to adopt regulations requiring 33 percent of electricity sold in the State come from renewable energy by 2020. CARB adopted the Renewable Electricity Standard on September 23, 2010, which requires 33 percent renewable energy by 2020 for most publicly owned electricity retailers.

Executive Order S-21-09

Issued on July 17, 2009, Executive Order S-21-09 directs CARB to adopt regulations to increase California's RPS to 33 percent by 2020. This builds upon SB 1078 (2002), which established the California RPS program, requiring 20 percent renewable energy by 2017, and SB 107 (2006), which advanced the 20 percent deadline to 2010, a goal which was expanded to 33 percent by 2020 in the 2005 Energy Action Plan II.

Executive Order B-30-15

Issued on April 29, 2015, Executive Order B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030 and directs CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of CO_2e (MMTCO2e). The 2030 target acts as an interim goal on the way to achieving reductions of 80 percent below 1990 levels by 2050, a goal set by Executive Order S-3-05. The executive order also requires the State's climate adaptation plan to be updated every three years and for the State to continue its climate change research program, among other provisions. With the enactment of SB 32 in 2016, the Legislature codified the goal of reducing GHG emissions by 2030 to 40 percent below 1990 levels.

Executive Order B-55-18.

Issued on September 10, 2018, Executive Order B-55-18 establishes a goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter. This goal is in addition to the existing statewide targets of reducing GHG emissions. The executive order requires CARB to work with relevant state agencies to develop a framework for implementing this goal. It also requires CARB to update the Scoping Plan to identify and recommend measures to achieve carbon neutrality. The executive order also requires state agencies to develop sequestration targets in the Natural and Working Lands Climate Change Implementation Plan.

Executive Order N-79-20

Issued on September 23, 2020, Executive Order N-79-20 established a goal to end the sales of new internal combustion engine vehicles in the state as soon as possible, and no later than 2035, and continue to phaseout fossil-fueled cars and trucks. By setting a course to end sales of internal combustion passenger vehicles by 2035, the Governor's Executive Order establishes a target for the transportation sector that helps put the state on a path to carbon neutrality by 2045. It is important to note that the Executive Order focuses on new vehicle sales for automakers, and therefore does not require Californians to give up the existing cars and trucks they already own.

California Regulations and Building Codes

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat even with rapid population growth.

Title 20 Appliance Efficiency Regulations

The appliance efficiency regulations (California Code of Regulations [CCR] Title 20, Sections 1601-1608) include standards for new appliances. Twenty-three categories of appliances are included in the scope of these regulations. These standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

Title 24 Building Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR Title 24, Part 6) was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The 2016 Building Energy Efficiency Standards approved on January 19, 2016 went into effect on January 1, 2017. The 2019 Building Energy Efficiency Standards were adopted on May 9, 2018 and took effect on January 1, 2020. Under the 2019 standards, homes will use about 53 percent less energy and nonresidential buildings will use about 30 percent less energy than buildings under the 2016 standards.

On August 11, 2021, the CEC adopted the 2022 Energy Code. In December, it was approved by the California Building Standards Commission for inclusion into the California Building Standards Code. The 2022 Energy Code encourages efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, strengthens ventilation standards, and more. Buildings whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 Energy Code.

Title 24 California Green Building Standards Code

The California Green Building Standards Code (CCR Title 24, Part 11 code) commonly referred to as the CALGreen Code, is a statewide mandatory construction code developed and adopted by the California Building Standards Commission and the Department of Housing and Community Development. The CALGreen standards require new residential and commercial buildings to comply with mandatory measures under the topics of planning and design, energy efficiency, water efficiency/conservation, material conservation and resource efficiency, and environmental quality. CALGreen also provides voluntary tiers and measures that local governments may adopt that encourage or require additional measures in the five green building topics. The most recent update to the CALGreen Code went into effect January 1, 2017. Updates to the 2016 CALGreen Code took effect on January 1, 2020 (2019 CALGreen). The 2019 CALGreen standards continue to improve upon the existing standards for new construction of, and additions and alterations to, residential and nonresidential buildings.

3.3 Regional

South Coast Air Quality Management District Rule 2305 (Warehouse Indirect Source Rule)

Rule 2305 was adopted by the SCAQMD Governing Board on May 7, 2021 to reduce nitrogen oxide and particulate matter emissions associated with warehouses and mobile sources attracted to warehouses. However, Rule 2305 would also reduce GHG emissions. This rule applies to all existing and proposed warehouses over 100,000 square feet located in the SCAQMD. Rule 2305 requires warehouse operators to track annual vehicle miles traveled associated with truck trips to and from the warehouse. These trip miles are used to calculate the warehouses WAIRE (Warehouse Actions and Investments to Reduce Emissions) Points Compliance Obligation. WAIRE Points are earned based on emission reduction measures and warehouse operators are required to submit an annual WAIRE Report which includes truck trip data and emission reduction measures. Reduction strategies listed in the WAIRE menu include acquire zero emission (ZE) or near zero emission (NZE) trucks; require ZE/NZE truck visits; require ZE yard trucks; install on-site ZE charging/fueling infrastructure; install onsite energy systems; and install filtration systems in residences, schools, and other buildings in the adjacent community. Warehouse operators that do not earn a sufficient number of WAIRE points to satisfy the WAIRE Points Compliance Obligation would be required to pay a mitigation fee. Funds from the mitigation fee will be used to incentivize the purchase of cleaner trucks and charging/fueling infrastructure in communities nearby.

South Coast Air Quality Management District Thresholds

The South Coast Air Quality Management District (SCAQMD) formed a GHG California Environmental Quality Act (CEQA) Significance Threshold Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. This working group was formed to assist SCAQMD's efforts to develop a GHG significance threshold and is composed of a wide variety of stakeholders including the State Office of Planning and Research, CARB, the Attorney General's Office, a variety of city and county planning departments in the South Coast Air Basin (SCAB), various utilities such as sanitation and power companies throughout the SCAB, industry groups, and environmental and professional organizations. The Working Group has proposed a tiered approach to evaluating GHG emissions for development projects where SCAQMD is not the lead agency, wherein projects are evaluated sequentially through a series of "tiers" to determine whether the project is likely to result in a potentially significant impact due to GHG emissions.

With the tiered approach, the Project is compared with the requirements of each tier sequentially and would not result in a significant impact if it complies with any tier. Tier 1 excludes projects that are specifically exempt from SB 97 from resulting in a significant impact. Tier 2 excludes projects that are consistent with a GHG reduction plan that has a certified final CEQA document and complies with AB 32 GHG reduction goals. Tier 3 excludes projects with annual emissions lower than a screening threshold. The SCAQMD has adopted a threshold of 10,000 metric tons of CO_2e ($MTCO_2e$) per year for industrial projects and a 3,000 $MTCO_2e$ threshold was proposed for non-industrial projects but has not been adopted. During Working Group Meeting #7 it was explained that this threshold was derived using a 90 percent capture rate of a large sampling of industrial facilities. During Meeting #8, the Working Group defined industrial uses as production, manufacturing, and fabrication activities or storage and distribution (e.g., warehouse, transfer facility, etc.). The Working Group indicated that the 10,000 $MTCO_2e$ per year threshold applies to both emissions from construction and operational phases plus indirect emissions (electricity, water use, etc.) The SCAQMD concluded that projects with emissions less than the screening threshold would not result in a significant cumulative impact.

Tier 4 consists of three decision tree options. Under the Tier 4 first option, SCAQMD initially outlined that a project would be excluded if design features and/or mitigation measures resulted in emissions 30 percent lower than business as usual emissions. However, the Working Group did not provide a recommendation for this approach. The Working Group folded the Tier 4 second option into the third option. Under the Tier 4 third option, a project would be excluded if it was below an efficiency-based threshold of 4.8 $MTCO_2e$ per service population per year. Tier 5 would exclude projects that implement offsite mitigation (GHG reduction projects) or purchase offsets to reduce GHG emission impacts to less than the proposed screening level.

Tier 3 Screening Thresholds

When the tiered approach is applied to a proposed project, and the project is found not to comply with Tier 1 or Tier 2, the project's emissions are compared against a screening threshold, as described above, for Tier 3. The screening threshold formally adopted by SCAQMD is an "interim" screening threshold for stationary source industrial projects where the SCAQMD is the lead agency under CEQA. The threshold was termed "interim" because, at the time, SCAQMD anticipated that CARB would be adopting a statewide significance threshold that would inform and provide guidance to SCAQMD in its adoption of a final threshold. However, no statewide threshold was ever adopted, and the interim threshold remains in effect.

For projects for which SCAQMD is not a lead agency, no screening thresholds have been formally adopted. However, the SCAQMD Working Group has recommended a threshold of 10,000 $MTCO_2e$/year for industrial projects and 3,000 $MTCO_2e$/year for residential and commercial projects. SCAQMD determined that these thresholds would "capture" 90 percent of GHG emissions from these sectors, "capture" meaning that 90 percent of total emissions from all new projects would be subject to some type of CEQA analysis (i.e., found potentially significant).[5]

Southern California Association of Governments

On September 3, 2020, the Southern California Association of Governments (SCAG) Regional Council adopted Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy [2020 RTP/SCS]). The RTP/SCS charts a course for closely integrating land use and transportation so that the region can grow smartly and sustainably. The strategy was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The RTP/SCS is a long-range vision plan that balances future mobility and housing needs with economic, environmental, and public health goals. The SCAG region strives toward sustainability through integrated land use and transportation planning. The SCAG region must achieve specific federal air quality standards and is required by state law to lower regional GHG emissions.

[5] SCAQMD, "Staff Report: Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans," December 5, 2008, Attachment E: "Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold," October 2008, p. 3-2.

3.4 Local

City of Tustin General Plan

The City of Tustin General Plan contains the following goals and policies that address greenhouse gas as part of the Conservation, Open Space, and Recreation Element:

Goal 4: Reduce emissions through reduced energy consumption.

Policy 4.1: Promote energy conservation in all sectors of the City including residential, commercial, and industrial.

Policy 4.2: Promote local recycling of wastes and the use of recycled materials.

Goal 11: Conserve energy resources through use of available energy technology and conservation practices.

Policy 11.1: Encourage the use of new technologies and innovative building design, site design and orientation techniques which minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping, and building materials.

Policy 11.2: Maintain local legislation to establish, update and implement energy performance building code requirements established under State Title 24 Energy Regulations.

4 SIGNIFICANCE CRITERIA AND METHODOLOGY

4.1 Thresholds and Significance Criteria

Addressing GHG emissions generation impacts requires an agency to determine what constitutes a significant impact. The amendments to the CEQA Guidelines specifically allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. This means that each agency is left to determine whether a project's GHG emissions will have a "significant" impact on the environment. The guidelines direct that agencies are to use "careful judgment" and "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" the project's GHG emissions[6].

Based upon the criteria derived from Appendix G of the CEQA Guidelines, a project normally would have a significant effect on the environment if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, based on any applicable threshold of significance; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

South Coast Air Quality Management District Thresholds

On December 5, 2008, the SCAQMD Governing Board adopted a 10,000 $MTCO_2e$ industrial threshold for projects where SCAQMD is the lead agency. The SCAQMD GHG CEQA Significance Threshold Working Group defined industrial uses as production, manufacturing, and fabrication activities or storage and distribution (e.g., warehouse, transfer facility, etc.) during Meeting #8. Additionally, the SCAQMD GHG Significance Threshold Stakeholder Working Group has specified that a warehouse is considered to be an industrial project.[7] During the GHG CEQA Significance Threshold Working Group Meeting #15, the SCAQMD noted that it was considering extending the industrial GHG significance threshold for use by all lead agencies. Furthermore, the Working Group indicated that the 10,000 $MTCO_2e$ per year threshold applies to both emissions from construction and operational phases plus indirect emissions (electricity, water use, etc.). The SCAQMD has not announced when staff is expecting to present GHG thresholds for land use projects where the SCAQMD is not the lead agency to the governing board.

As the Project involves the construction of new warehouse, the 10,000 $MTCO_2e$ per year industrial screening threshold has been selected as the significance threshold, as it is most applicable to the proposed Project. This threshold is selected because the proposed Project is analogous to an industrial use much more closely than any other land use such as commercial or residential in terms of its expected operating characteristics. Typical industrial zoned areas include storage facilities, warehouses, plants, and airports, while commercial land uses are generally designated as businesses that have some kind of interaction with the public and typically include offices, retail stores, hotels, or restaurants. Additionally, to ensure that the threshold is conservative in its application, although the SCAQMD uses their adopted 10,000 $MTCO_2e$ threshold to determine the significance of stationary source emissions for industrial

[6] 14 California Code of Regulations, Section 15064.4a

[7] South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #8*, 2009.

projects, the 10,000 $MTCO_2e$ threshold used in the analysis is conservatively applied to all sources of project-related GHG emissions whether stationary source, mobile source, area source, or other.

4.2 Methodology

Global climate change is, by definition, a cumulative impact of GHG emissions. Therefore, there is no project-level analysis. The baseline against which to compare potential impacts of the project includes the natural and anthropogenic drivers of global climate change, including world-wide GHG emissions from human activities which almost doubled between 1970 and 2010 from approximately 27 gigatonnes (Gt) of CO_2/year to nearly 49 $GtCO_2$/year.[8] As such, the geographic extent of climate change and GHG emissions cumulative impact discussion is worldwide.

The Project's construction and operational emissions were calculated using the California Emissions Estimator Model version 2020.4.0 (CalEEMod). Details of the modeling assumptions and emission factors are provided in Appendix A: Greenhouse Gas Emissions Data. For construction, CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecasted based on the proposed construction schedule and applying the mobile-source and fugitive dust emissions factors derived from CalEEMod. The Project's construction-related GHG emissions would be generated from off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles. The Project's operations-related GHG emissions would be generated by vehicular traffic, area sources (e.g. landscaping maintenance, consumer products), electrical generation, natural gas consumption, water supply and wastewater treatment, and solid waste.

5 POTENTIAL IMPACTS

5.1 Greenhouse Gas Emissions

Threshold 5.1 Would the Project generate GHG emissions, either directly or indirectly, that could have a significant impact on the environment?

Short-Term Construction Greenhouse Gas Emissions

The Project would result in direct emissions of GHGs from construction. The approximate quantity of daily GHG emissions generated by construction equipment utilized to build the Project is depicted in Table 2: Construction-Related Greenhouse Gas Emissions.

Table 2: Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$
Construction	469
30-Year Amortized Construction	16

Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.

As shown, the Project would result in the generation of approximately 469 $MTCO_2e$ over the course of construction. Construction GHG emissions are typically summed and amortized over a 30-year period, then added to the operational emissions[9]. The amortized Project construction emissions would be 16 $MTCO_2e$ per year. Once construction is complete, the generation of these GHG emissions would cease.

Long-Term Operational Greenhouse Gas Emissions

Operational or long-term emissions occur over the life of the Project. GHG emissions would result from direct emissions such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Total GHG emissions associated with the Project are summarized in Table 3: Project Greenhouse Gas Emissions. The Project is a speculative warehouse, and the modeled emissions are based on the conservative assumption that the Project would be occupied by a High-Cube Fulfillment Center Warehouse (ITE code 155), which has the highest trip generation rate among potential users for the site. Per the Trip Generation and Vehicle Miles Traveled (VMT) Analysis Memorandum, using the High-Cube Fulfillment Center Warehouse trip generation rate, the Project would generate 956 daily vehicle trips and approximately 28 of those trips would be trucks. However, a future tenant could have operations that would generate fewer emissions. As shown in Table 3, using conservative trip generation assumptions, the Project would potentially generate a net of approximately 373 $MTCO_2e$ annually from both

[9] The project lifetime is based on the standard 30-year assumption of the South Coast Air Quality Management District (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13,* August 26, 2009).

construction and operations and the Project-related GHG emissions would not exceed the SCAQMD's 10,000 $MTCO_2e$ per year threshold. Therefore, impacts would be less than significant.

Table 3: Project Greenhouse Gas Emissions

Emissions Source	$MTCO_2e$ per Year
Existing Conditions	1,755
Proposed Project	
Construction Amortized Over 30 Years	16
Area Source	<0.01
Energy	159
Mobile	1,360
Off-Road – Forklifts	124
Off-Road – Yard Trucks	252
Backup Generator	20
Waste	70
Water and Wastewater	127
Total Project Emissions	**2,128**
Net Emissions (Project – Existing)	***373***
SCAQMD Threshold	*10,000*
Exceeds Threshold?	**No**

Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.

Below is a description of the primary sources of operational emissions:

- **Area Sources**. Area source emissions occur from architectural coatings, landscaping equipment, and consumer products. Landscaping is anticipated to occur throughout the Project site. Additionally, the primary emissions from architectural coatings are volatile organic compounds, which are relatively insignificant as direct GHG emissions. The Project would result in <0.01 $MTCO_2e$/yr (refer to Table 3).

- **Energy Consumption**. Energy consumption consists of emissions from Project consumption of electricity and natural gas. Although the project is a speculative warehouse, the analysis conservatively assumed a worst-case scenario that total building area of the warehouse would be refrigerated. The Project would result in approximately 159 $MTCO_2e$/yr from energy consumption (refer to Table 3).

- **Off-Road Equipment.** Operational off-road emissions would be generated by off-road cargo handling equipment used during operational activities. For this project it was assumed that the warehouses would include three forklifts and one yard truck per SCAQMD data[10]. Based on CARB

[10] SCAQMD, *High Cube Warehouse Truck Trip Study White Paper Summary of Business Survey Results*, June 2014.

OFFROAD emissions data, the forklifts and yard truck would generate 124 and 252 $MTCO_2e$/yr, respectively.

- **Emergency Backup Generators**. As the Project warehouse is speculative, it is unknown whether emergency backup generators would be used. Backup generators would only be used in the event of a power failure and would not be part of the Project's normal daily operations. Nonetheless, emissions associated with this equipment were included to be conservative. Emissions from an emergency backup generator for each warehouse building were calculated separately from CalEEMod; refer to Appendix A. However, CalEEMod default emissions rates were used. If backup generators are required, the end user would be required to obtain a permit from the SCAQMD prior to installation. Emergency backup generators must meet SCAQMD's Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines), which would minimize emissions. Backup generator emissions would be 20 $MTCO_2e$/yr.

- **Mobile Sources**. Mobiles sources from the Project were calculated with CalEEMod based on the trip generation from the Transportation Analysis. As shown in Table 3, the mobile source emissions from the Project would be approximately 1,360 $MTCO_2e$/yr.

- **Solid Waste**. Solid waste releases GHG emissions in the form of methane when these materials decompose. The Project would result in approximately 70 $MTCO_2e$/yr from solid waste (refer to Table 3).

- **Water and Wastewater**. GHG emissions from water demand would occur from electricity consumption associated with water conveyance and treatment. The Project would result in approximately 127 $MTCO_2e$/yr from water and wastewater conveyance and treatment (refer to Table 3).

Table 3 shows that operational emissions from the proposed Project would generate approximately 2,128 $MTCO_2e$ per year. However, existing operations are currently generating 1,755 $MTCO_2e$/yr. Therefore, operation of the Project would result in a net increase of 373 $MTCO_2e$ /yr, and would be below the threshold of 10,000 $MTCO_2e$/yr.

It should be noted that the operational emissions reflect Project energy consumption based on the 2019 Title 24 Part 6 (Building Energy Efficiency Standards). The standards require updated thermal envelope standards (preventing heat transfer from the interior to exterior and vice versa), residential and nonresidential ventilation requirements, and nonresidential lighting requirements that would cut residential energy use by more than 50 percent (with solar) and nonresidential energy use by 30 percent. The standards also encourage demand responsive technologies including battery storage and heat pump water heaters and improve the building's thermal envelope through high performance attics, walls and windows to improve comfort and energy savings.[11] As noted above, the 2022 Energy Code becomes effective on January 1, 2023 and strengthens ventilation standards, includes new electric heat pump requirements, promotes electric-ready requirements for new homes (including the addition of circuitry for electric appliances, battery storage panels, and dedicated infrastructure), and expands solar

[11] California Energy Commission, *2019 Building Energy Efficiency Standards*, 2018. Available at: https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2019-building-energy-efficiency

photovoltaic and battery storage standards. The Project would be required to comply with the latest applicable version of the code depending on when permit applications are applied for (i.e., permit applications on or after January 1, 2023, must comply with the 2022 Energy Code[12]).

The Project would also comply with the appliance energy efficiency standards in Title 20 of the California Code of Regulations. The Title 20 standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances. The Project would be constructed according to the standards for high-efficiency water fixtures for indoor plumbing and water efficient irrigation systems required in 2019 Title 24, Part 11 (CALGreen).

At the State and global level, improvements in technology, policy, and social behavior can also influence and reduce operational emissions generated by a project. The state is currently on a pathway to achieving the Renewable Portfolio Standards goal of 33 percent renewables by 2020 and 60 percent renewables by 2030 per SB 100. Despite these goals, the majority of the Project's emissions would still be from mobile and energy sources. Future mobile source emissions are greatly dependent on changes in vehicle technology, fuels, and social behavior, which can be influenced by policies to varying degrees. Taking known future policies into account, CARB estimates that about 96 percent of future vehicles in Orange County would still run on fossil fuels, even with increased electric vehicle mode share.[13] This is assumed to also be applicable to the project vehicle fleet, absent data that may suggest otherwise. Due to these external factors, average emissions from transportation in 2050 would mostly still generate GHG emissions, but the quantity is uncertain in light of potential changes in technology and policy over the next 30 years.

The majority of Project emissions (approximately 87 percent) would occur from mobile and energy sources. As noted above, energy and mobile sources are targeted by statewide measures such as low carbon fuels, cleaner vehicles, strategies to promote sustainable communities and improved transportation choices that result in reducing VMT, continued implementation of the Renewable Portfolio Standard (the target is now set at 60 percent renewables by 2030), and extension of the Cap and Trade program (requires reductions from industrial sources, energy generation, and fossil fuels). The Cap and Trade program covers approximately 85 percent of California's GHG emissions as of January 2015. The statewide cap for GHG emissions from the capped sectors (i.e., electricity generation, industrial sources, petroleum refining, and cement production) commenced in 2013 and will decline approximately three percent each year, achieving GHG emission reductions throughout the program's duration. The passage of AB 398 in July 2017 extended the duration of the Cap and Trade program from 2020 to 2030. With continued implementation of various statewide measures, the Project's operational energy and mobile source emissions would continue to decline in the future.

Table 3 shows that GHG impacts would be less than significant. Project-related GHG emissions would not result in a cumulatively considerable contribution to the significant cumulative impact of climate change.

Standard Conditions and Requirements:

Standard Conditions are existing requirements and conditions of approval that are based on local, state, or federal regulations or laws that are frequently required independently of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because Standard Conditions are neither Project specific nor a result of development of the Project, they are not considered to be either PDFs or Mitigation Measures.

SC AQ-1 Prior to the issuance of grading permits, the City Engineer shall confirm that the Grading Plan, Building Plans and Specifications require all construction contractors to comply with South Coast Air Quality Management District's (SCAQMD's) Rules 402 and 403 to minimize construction emissions of dust and particulates. The measures include, but are not limited to, the following:

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.

SC AQ-2 The applicant shall require by contract specifications that the interior and exterior architectural coatings (paint and primer including parking lot paint) products used would comply with SCAQMD Rule 1113 which requires building envelope coatings to have a volatile organic compound rating of 50 grams per liter or less.

SC AQ -3 Require diesel powered construction equipment to turn off when not in use per Title 13 of the California Code of Regulations, Section 2449.

SC AQ -4 Install water-efficient irrigation systems and devices, such as soil moisture-based irrigation controls and sensors for landscaping according to the City's Water Efficient Landscape requirements (Article 9, Chapter 7 of the City's Municipal Code).

SC AQ -5 The Project shall be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. The Building Official, or designee shall ensure compliance prior to the issuance of each building permit. The Title 24 Energy Efficiency Standards (Section 110.10) require buildings to be designed to have 15 percent of the roof

area "solar ready" that will structurally accommodate later installation of rooftop solar panels. If future building operators pursue providing rooftop solar panels, they will submit plans for solar panels prior to occupancy.

SC AQ -6 The Project shall be designed in accordance with the applicable California Green Building Standards (CALGreen) Code (24 CCR, Part 11). The Building Official, or designee shall ensure compliance prior to the issuance of each building permit. These requirements include, but are not limited to:

- Design buildings to be water-efficient. Install water-efficient fixtures in accordance with Section 5.303 (nonresidential) of the California Green Building Standards Code Part 11.
- Recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste in accordance with Section 5.408.1 (nonresidential) of the California Green Building Standards Code Part 11.
- Provide storage areas for recyclables and green waste and adequate recycling containers located in readily accessible areas in accordance Section 5.410 (nonresidential) of the California Green Building Standards Code Part 11.
- Provide designated parking for any combination of low-emitting, fuel efficient and carpool/van pool vehicles. At least eight percent of the total parking spaces are required to be designated in accordance Section 5.106.5.2 (nonresidential), Designated Parking for Clean Air Vehicles, of the California Green Building Standards Code Part 11.
- To facilitate future installation of electric vehicle supply equipment (EVSE), nonresidential construction shall comply with Section 5.106.5.3 (nonresidential electric vehicle charging) of the California Green Building Standards Code Part 11.

SC AQ-7 All on-site forklifts shall be non-diesel and shall be powered by electricity, compressed natural gas, or propane if technically feasible.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

5.2 Greenhouse Gas Reduction Plan Compliance

Threshold 5.2 Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?

SCAG RTP/SCS Consistency

On September 3, 2020, the Southern California Association of Governments (SCAG) Regional Council adopted Connect SoCal (*2020-2045 Regional Transportation Plan/ Sustainable Communities Strategy* [RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions,

tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and Federal Clean Air Act (FCAA) requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the RTP/SCS goals is analyzed in detail in Table 4: Regional Transportation Plan/Sustainable Communities Strategy Consistency.

Compliance with applicable State standards would ensure consistency with State and regional GHG reduction planning efforts. The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in Table 4, the proposed Project would be consistent with the stated goals of the RTP/SCS. Therefore, the proposed Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Table 4: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		**Compliance**	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	N/A:	Although this Project is not a transportation improvement project, the Project is located near existing transit routes on Myford Road, Walnut Avenue, and access to I-5.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development are encouraged through

Table 4: Regional Transportation Plan/Sustainable Communities Strategy Consistency			
SCAG Goals		**Compliance**	
			the development of alternative transportation methods, green design techniques for buildings, and other energy-reducing techniques. This development project is required to comply with the provisions of the California Building Energy Efficiency Standards and the Green Building Standards Code (CALGreen).
GOAL 6:	Support healthy and equitable communities.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 9:	Encourage development of diverse housing types in areas that are supported by multiple transportation options.	N/A:	This is not a housing development project and is therefore not applicable. However, the Project is located within a relatively short walking distance to local bus routes.
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	N/A:	This is not a project-specific policy and is therefore not applicable.

The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in Table 4, the Project would be consistent with the stated goals of the RTP/SCS and the CARB Scoping Plan. Therefore, the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Consistency with the CARB Scoping Plan

The California State Legislature adopted AB 32 in 2006. AB 32 focuses on reducing GHGs (carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride) to 1990 levels by the year 2020. Pursuant to the requirements in AB 32, CARB adopted the Climate Change Scoping Plan (Scoping Plan) in 2008, which outlines actions recommended to obtain that goal. The Scoping Plan provides a range of GHG reduction actions that include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market- based mechanisms such as the cap-and-trade program, and an AB 32 implementation fee to fund the program.

The latest CARB Climate Change Scoping Plan (2017) outlines the state's strategy to reduce state's GHG emissions to return to 40 percent below 1990 levels by 2030 pursuant to SB 32. The CARB Scoping Plan is applicable to state agencies and is not directly applicable to cities/counties and individual projects. Nonetheless, the Scoping Plan has been the primary tool that is used to develop performance-based and efficiency-based CEQA criteria and GHG reduction targets for climate action planning efforts.

The 2017 Scoping Plan Update identifies additional GHG reduction measures necessary to achieve the 2030 target. These measures build upon those identified in the First Update to the Climate Change Scoping Plan (2013). Although a number of these measures are currently established as policies and measures, some measures have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions would be adopted as required to achieve statewide GHG emissions targets. As shown in Table 5, the Project is consistent with most of the strategies, while others are not applicable to the Project.

Table 5: Project Consistency with Applicable CARB Scoping Plan Measures

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
Transportation	California Cap-and-Trade Program Linked to Western Climate Initiative	Regulation for the California Cap on GHG Emissions and Market-Based Compliance Mechanism October 20, 2015 (CCR 95800)	**Consistent.** The Cap-and-Trade Program applies to large industrial sources such as power plants, refineries, and cement manufacturers. However, the regulation indirectly affects people who use the products and services produced by these industrial sources when increased cost of products or services (such as electricity and fuel) are transferred to the consumers. The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects' electricity usage are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the Program's first compliance period.
	California Light-Duty Vehicle GHG Standards	Pavley I 2005 Regulations to Control GHG Emissions from Motor Vehicles Pavley I 2005 Regulations to Control GHG Emissions from Motor Vehicles	**Consistent**. This measure applies to all new vehicles starting with model year 2012. The Project would not conflict with its implementation as it would apply to all new passenger vehicles purchased in California. Passenger vehicles, model year 2012 and later, associated with construction and operation of the Project would be required to comply with the Pavley emissions standards.
		2012 LEV III California GHG and Criteria Pollutant Exhaust and Evaporative Emission Standards	**Consistent.** The LEV III amendments provide reductions from new vehicles sold in California between 2017 and 2025. Passenger vehicles associated with the site would comply with LEV III standards.
	Low Carbon Fuel Standard	2009 readopted in 2015. Regulations to Achieve GHG Emission Reductions Subarticle 7. Low Carbon Fuel Standard CCR 95480	**Consistent.** This measure applies to transportation fuels utilized by vehicles in California. The Project would not conflict with implementation of this measure. Motor vehicles associated with construction and operation of the Project would utilize low carbon transportation fuels as required under this measure.
	Regional Transportation-Related GHG Targets.	SB 375. Cal. Public Resources Code §§ 21155, 21155.1, 21155.2, 21159.28	**Consistent**. The Project would provide development in the region that is consistent with the growth projections in the RTP/SCS.
	Goods Movement	Goods Movement Action Plan January 2007	**Not applicable**. The Project does not propose any changes to maritime, rail, or intermodal facilities or forms of transportation.

Table 5: Project Consistency with Applicable CARB Scoping Plan Measures

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
	Medium/Heavy-Duty Vehicle	2010 Amendments to the Truck and Bus Regulation, the Drayage Truck Regulation and the Tractor-Trailer GHG Regulation	**Consistent**. This measure applies to medium and heavy-duty vehicles that operate in the state. The Project would not conflict with implementation of this measure. Medium and heavy-duty vehicles associated with construction and operation of the Project would be required to comply with the requirements of this regulation.
	High Speed Rail	Funded under SB 862	**Not applicable**. This is a statewide measure that cannot be implemented by a project applicant or Lead Agency.
Electricity and Natural Gas	Energy Efficiency	Title 20 Appliance Efficiency Regulation	**Consistent.** The Project would not conflict with implementation of this measure. The Project would comply with the latest energy efficiency standards.
		Title 24 Part 6 Energy Efficiency Standards for Residential and Non-Residential Building	
		Title 24 Part 11 California Green Building Code Standards	
	Renewable Portfolio Standard/Renewable Electricity Standard.	2010 Regulation to Implement the Renewable Electricity Standard (33% 2020)	**Consistent**. The Project would obtain electricity from the electric utility, Southern California Edison (SCE). In 2018 SCE obtained 42 percent of its power supply from renewable sources, including large hydroelectric projects. Therefore, the utility would provide power when needed on site that is composed of a greater percentage of renewable sources.
	Million Solar Roofs Program	SB 350 Clean Energy and Pollution Reduction Act of 2015 (50% 2030)	
	Million Solar Roofs Program	Tax Incentive Program	**Consistent.** This measure is to increase solar throughout California, which is being done by various electricity providers and existing solar programs. The program provides incentives that are in place at the time of construction.
Water	Water	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The Project would comply with the CalGreen standards, which requires a 20 percent reduction in indoor water use. The Project would also comply with the City's Water-Efficient Landscaping Regulations (Article 9, Chapter 7 of the Tustin Municipal Code).
		SBX 7-7—The Water Conservation Act of 2009	
		Model Water Efficient Landscape Ordinance	
Green Buildings	Green Building Strategy	Title 24 Part 11 California Green Building Code Standards	**Consistent.** The State is to increase the use of green building practices. The Project would implement required green building strategies through existing regulation that requires the Project to comply with various CalGreen requirements. The Project includes sustainability design features that support the Green Building Strategy.
Industry	Industrial Emissions	2010 CARB Mandatory Reporting Regulation	**Not applicable.** The Mandatory Reporting Regulation requires facilities and entities with more than 10,000 $MTCO_2e$ of combustion and process emissions, all facilities belonging to certain industries, and all electric power entities to submit an annual GHG emissions

Table 5: Project Consistency with Applicable CARB Scoping Plan Measures

Scoping Plan Sector	Scoping Plan Measure	Implementing Regulations	Project Consistency
			data report directly to CARB. As shown above, although total Project GHG emissions would exceed 10,000 $MTCO_2e$, the majority of these emissions are from mobile sources. Therefore, this regulation would not apply.
Recycling and Waste Management	Recycling and Waste	Title 24 Part 11 California Green Building Code Standards AB 341 Statewide 75 Percent Diversion Goal	**Consistent.** The Project would not conflict with implementation of these measures. The Project is required to achieve the recycling mandates via compliance with the CALGreen code. The City has consistently achieved its state recycling mandates.
Forests	Sustainable Forests	Cap and Trade Offset Projects	**Not applicable.** The Project is in an area designated for urban uses. No forested lands exist on-site.
High Global Warming Potential	High Global Warming Potential Gases	CARB Refrigerant Management Program CCR 95380	**Consistent**. The regulations are applicable to refrigerants used by large air conditioning systems and large commercial and industrial refrigerators and cold storage system. The Project would not conflict with the refrigerant management regulations adopted by CARB.
Agriculture	Agriculture	Cap and Trade Offset Projects for Livestock and Rice Cultivation	**Not applicable**. The Project site is designated for urban development. No grazing, feedlot, or other agricultural activities that generate manure occur currently exist on-site or are proposed to be implemented by the Project.

Source: California Air Resources Board, *California's 2017 Climate Change Scoping Plan*, November 2017 and CARB, *Climate Change Scoping Plan*, December 2008.

As seen in Table 4 and Table 5, the Project would be consistent with all applicable plan goals. In addition, the Project would include several sustainable design features that would help reduce GHG emissions. As shown in Table 3, with mitigation the Project is estimated to emit approximately 2,128 $MTCO_2e$ per year directly from on-site activities and indirectly from off-site motor vehicles (a net increase of 373 $MTCO_2e$). The GHG emissions caused by long-term operation of the Project would be less than significant.

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the Project would benefit from the implementation of current and potential future regulations (e.g., improvements in vehicle emissions, SB 100/renewable electricity portfolio improvements, CARB's Mobile Source Strategy, etc.) enacted to meet an 80 percent reduction below 1990 levels by 2050.

The majority of the GHG reductions from the Scoping Plan would result from continuation of the Cap-and-Trade regulation. Assembly Bill 398 (2017) extends the state's Cap-and-Trade program through 2030 and the Scoping Plan provide a comprehensive plan for the state to achieve its GHG targets through a variety of regulations enacted at the state level. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 60 percent renewable electricity by 2030 and 100 percent renewable by 2045), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the Mobile Source Strategy and Sustainable Freight Action Plan.

Several of the State's plans and policies would contribute to a reduction in mobile source emissions from the Project. These include the following:

- **CARB's Advanced Clean Truck Regulation**: Adopted in June 2020, CARB's Advanced Clean Truck Regulation requires truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8.

- **Executive Order N-79-20**: Executive Order N-79-20 establishes the goal for all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035 and all medium and heavy-duty vehicles will be zero-emission by 2045. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium-and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new ZEVs "towards the target of 100 percent."

- **CARB's Mobile Source Strategy**: CARB's Mobile Source Strategy takes an integrated planning approach to identify the level of transition to cleaner mobile source technologies needed to achieve all of California's targets by increasing the adoption of ZEV buses and trucks.

- **CARB's Sustainable Freight Action Plan**: The Sustainable Freight Action Plan which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks. This Plan applies to all trucks accessing the Project site and may include existing trucks or new trucks that are part of the statewide goods movement sector.

- **CARB's Emissions Reduction Plan for Ports and Goods Movement**: CARB's Emissions Reduction Plan for Ports and Goods Movement identifies measures to improve goods movement efficiencies such as advanced combustion strategies, friction reduction, waste heat recovery, and electrification of accessories.

While these measures are not directly applicable to the Project, any commercial activity associated with goods movement would be required to comply with these measures as adopted. As such, the Project would not interfere with their implementation.

The Project would not obstruct or interfere with efforts to increase ZEVs or state efforts to improve system efficiency. As described above, the Project would be consistent with all applicable plan goals. Compliance with applicable State standards (e.g., continuation of the Cap-and-Trade regulation; CARB's Mobile Source Strategy, Sustainable Freight Action Plan, and Advanced Clean Truck Regulation; Executive Order N-79-20; SB 100/renewable electricity portfolio improvements that require 60 percent renewable electricity by 2030 and 100 percent renewable by 2045, etc.) would ensure consistency with State and regional GHG reduction planning efforts.

The Project does not conflict with the applicable plans that are discussed above and therefore with respect to this particular threshold, the Project does not have a significant impact.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

5.3 Cumulative Setting and Impacts

Cumulative Setting

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about 1 day), GHGs have much longer atmospheric lifetimes of 1 year to several thousand years that allow them to be dispersed around the globe.

Cumulative Impacts

It is generally the case that an individual project of this size and nature is of insufficient magnitude by itself to influence climate change or result in a substantial contribution to the global GHG inventory. GHG impacts are recognized as exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective. The additive effect of project-related GHGs would not result in a reasonably foreseeable cumulatively considerable contribution to global climate change. In addition, the Project as well as other cumulative related projects would also be subject to all applicable regulatory requirements, which would further reduce GHG emissions. As shown in Table 4 and Table 5, the Project would not conflict with any applicable GHG reduction plans including the CARB Scoping Plan and the RTP/SCS. Therefore, the Project's cumulative contribution of GHG emissions would be less than significant and the Project's cumulative GHG impacts would also be less than cumulatively considerable.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	5.00	1000sqft	0.11	5,000.00	0
Unrefrigerated Warehouse-No Rail	143.44	1000sqft	3.29	143,440.00	0
Parking Lot	164.22	1000sqft	3.78	164,220.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - building area

Construction Phase - anticipated schedule

Trips and VMT - Demolished material hauled to Frank R. Bowerman Landfill, approximately 7.9 miles from site.

Demolition -

Grading -

Vehicle Trips - Office = 928 daily passenger car trips, Warehouse = 28 daily truck trips

Construction Off-road Equipment Mitigation - SCAQMD Rule 403

Fleet Mix - office = passenger cars, warehouse = trucks

Myford II - Orange County, Annual

Report Transmittal
Phase I Environmental Site Assessment
14321 Myford Road
Tustin, California 92780

Dear Mr. LeBlanc:

Transmitted herewith is a Phase I Environmental Site Assessment report for the approximately 3.51-acre property at 14321 Myford Road in Tustin, California. If you have any questions about the report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 102 or at pmiller@avocetenv.com.

Respectfully submitted,

EXECUTIVE SUMMARY

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.51-acre[1] property at 14321 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The primary objective of the Phase I ESA is to evaluate the history and current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have adversely impacted the underlying vadose zone and/or groundwater. Based on the site's history and current condition, "Recognized Environmental Conditions" (RECs), "Controlled RECs" (CRECs), and "Historical RECs" (HRECs), as defined in ASTM Standard E1527-13 (ASTM, 2013), and "other environmental features" (OEFs) have been identified. For Phase I ESA purposes, OEFs are defined as conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which Avocet believes warrant mention for visibility purposes in the context of acquiring and/or redeveloping the site. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger scale aerial photograph of the site is presented in Figure 3.

OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a single-story building with a footprint of approximately 60,000 square feet. The site is currently occupied by Woodbridge Glass-Werner Systems, Inc. (Woodbridge Glass). Woodbridge Glass uses part of the building to manufacture aluminum window frames for commercial buildings, although the glass is installed elsewhere. The remainder of the building is administrative office space and the exterior areas are paved for parking and outdoor storage or are landscaped (Figure 3). According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	Area (Acres)	Address	Reported Owner
432-473-13	3.51	14321 Myford Road	Siciliani Brothers, LLC

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the site is believed to have been developed with the existing building in or shortly before 1980. Wespercorp, a manufacturer of computer parts and biomedical and analytical instruments, is believed to have been the first occupant at the site. Permits indicate Wespercorp operated two vapor spray degreasers with 1,1,1-trichloroethane (1,1,1-TCA), "trichlorotri-fluoroethane" (Freon 113), methylene chloride, or some combination of these three used as the degreasing solvent. However, it is not clear where the two degreasers were located or how long they were used for. It is not clear exactly when, but at some point, Silicon Systems, Inc. (SSi), which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the southwest-adjacent property at 14351 Myford Road. Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, permits indicate SSi operated a boiler, a soldering machine, and an oven at 14321 Myford Road; however, some or all of this equipment may actually have been installed next door at 14351 Myford Road, with 14321 Myford Road used as the mailing address.

Woodbridge Glass has occupied by the site since 2003 and manufactures aluminum window frames in the rear (northwest) end of the building, with the remainder built out as administrative office space. Woodbridge Glass's operations at the site include cutting and assembling aluminum frames, including welding, for commercial windows, although the glass for the windows is installed at another nearby facility. The workshop features multiple laser cutters, saws, and shearing machines. Potentially hazardous substances used in the manufacturing operations include synthetic cutting oil, small quantities of petroleum-based lubricants for machinery, and small quantities of gasoline and diesel used in equipment such as generators and forklifts. The outdoor portions of the site are paved and are either used for employee parking or for outdoor storage of aluminum bar stock and wooden pallets. Liquid wastes are stored inside the building, for the most part with secondary containment, and periodically transported offsite for disposal or to be recycled; none of the liquid waste is treated onsite. The subject site is not known to have featured, nor did Avocet observe, any subsurface infrastructure such as wastewater clarifiers, underground storage tanks (USTs), or floor drains.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site, as follows:

- **REC 1 – Former Degreasers.** Permits issued by South Coast Air Quality Management District (SCAQMD) in 1980 indicate that Wespercorp, a former occupant, operated two vapor spray degreasers at the site starting in 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents. It is not clear where the two degreasers were located or how long they were used; however, solvent releases from vapor degreasers are common, including via liquid "drag-out" and as heavier-than-air vapors. Based on the possible presence of organic vapors in the subsurface, Avocet considers the former degreasers a REC.

CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any HRECs at the site.

OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and redeveloping the site.

OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified two OEFs at the site, sequentially numbered after the REC, as follows:

- **OEF 2 – Site-Wide POL Use.** Petroleum, oil, and lubricants (POLs) have been used in the workshop since Woodbridge Glass started operating at the site in 2003. The workshop currently features drums and smaller containers of used and fresh cutting oil and lubricating oil for machinery. Drums and smaller storage containers are stored largely with secondary containment, but Avocet did observe a few containers without secondary containment during the walkover survey. Minor staining was observed during Avocet's walkover survey throughout the interior of the workshop, which suggests that periodic, *de minimis* surface spills have occurred. However, there are no indications of larger or more significant spills and none of the surfaces in the vicinity of these areas are unpaved.

- **OEF 3 – ACMs and LBP.** The site was developed in or before 1980, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has since been extensively remodeled and SCAQMD records indicate at least some ACMs were abated in 2011. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs, however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if volatile organic compounds (VOCs) are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that Wespercorp, a former occupant, operated two vapor spray degreasers at the site, a VIC cannot be ruled out, and as chlorinated solvents were released at the former Tungsten Carbide Manufacturing facility to the southwest, a VEC also cannot be ruled out without soil vapor sampling.

1.0 INTRODUCTION

This report documents a Phase I environmental site assessment (ESA) for the approximately 3.51-acre[1] property at 14321 Myford Road in Tustin, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC, which may acquire and redevelop the site for commercial/light industrial purposes. Avocet conducted this Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standards E1527-13 and E1527-21. ASTM E1527-13 has been accepted as meeting the U.S. Environmental Protection Agency (EPA) "all appropriate inquiries" (AAI) requirement for "innocent landowner" protection. ASTM E1527-21 is expected to also meet the AAI requirement but has not yet been approved by EPA. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger-scale aerial photograph of the site is presented in Figure 3.

1.1 OVERVIEW

The site is in a commercial/light industrial area of Tustin, southwest of the Santa Ana (5) Freeway and northwest of Jamboree Road and the Eastern Transportation Corridor, aka the 261 Toll Road (Figure 1). On a more local basis, the site is located within the block bounded by Franklin Avenue to the northwest, Myford Road to the southeast, Michelle Drive to the northeast, and Walnut Avenue to the southwest. The site currently features a single-story building with a footprint of approximately 60,000 square feet. The site is currently occupied by Woodbridge Glass-Werner Systems, Inc. (Woodbridge Glass). Woodbridge Glass uses part of the building to manufacture aluminum window frames for commercial buildings, although the glass is installed elsewhere. The remainder of the building is administrative office space, and the exterior areas are paved for parking and outdoor storage or are landscaped (Figure 3). According to information available from Environmental Data Resources, LLC (EDR), of Shelton, Connecticut, the site consists of a single parcel, as follows:

Assessor's Parcel Number	Area (Acres)	Address	Reported Owner
432-473-13	3.51	14321 Myford Road	Siciliani Brothers, LLC

Historical aerial photographs show that the site and much of the surrounding area was agricultural until the early 1970s; however, the site is believed to have been developed with the existing building in or shortly before 1980. Wespercorp, a manufacturer of computer parts and biomedical and analytical instruments, is believed to have been the first occupant at the site. Permits indicate Wespercorp operated two vapor spray degreasers with 1,1,1-trichloroethane (1,1,1-TCA), "trichlorotri-fluoroethane" (Freon 113), methylene chloride, or some combination of these three used as the degreasing solvent. However, it is not clear where the two degreasers were located or how long they were used. It is not clear exactly when, but at some point, Silicon Systems, Inc.

[1] The acreages and measurements provided in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

(SSi), which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the southwest-adjacent property at 14351 Myford Road. Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, permits indicate SSi operated a boiler, a soldering machine, and an oven at 14321 Myford Road; however, some or all of this equipment may actually have been installed next door at 14351 Myford Road, with 14321 Myford Road used as the mailing address.

Woodbridge Glass has occupied the site since 2003 and manufactures aluminum window frames in the rear (northwest) end of the building, with the remainder built out as administrative office space. Woodbridge Glass's operations at the site include cutting and assembling aluminum frames, including welding, for commercial windows, although the glass for the windows is installed at another nearby facility. The workshop features multiple laser cutters, saws, and shearing machines. Potentially hazardous substances used in the manufacturing operations include synthetic cutting oil, small quantities of petroleum-based lubricants for machinery, and small quantities of gasoline and diesel used in equipment such as generators and forklifts. The outdoor portions of the site are paved and are either used for employee parking or for outdoor storage of aluminum bar stock and wooden pallets. Liquid wastes are stored inside the building, for the most part with secondary containment, and periodically transported offsite for disposal or to be recycled; none of the liquid waste is treated onsite. The subject site is not known to have featured, nor did Avocet observe, any subsurface infrastructure such as wastewater clarifiers, underground storage tanks (USTs), or floor drains.

1.2 PHASE I ESA OBJECTIVES

The overall objective of the Phase I ESA documented herein is to assess the site in the context of the possible presence of potentially hazardous substances in the onsite structures and the documented presence of hazardous substances in soil and groundwater beneath the site. Specific objectives of the Phase I ESA are to:

- Document the history of the site in the context of the use, storage, handling, treatment, and disposal of potentially hazardous substances.
- Review and evaluate available information related to the investigation and remediation of known or suspected subsurface impacts.
- Assess the potential for previously unidentified hazardous substances to be present in the subsurface as a result of their past use, storage, handling, or disposal within or near the site.
- Identify "Recognized Environmental Conditions" (RECs), "Controlled" RECs (CRECs), and historical RECs (HRECs), as defined in ASTM Standard E1527-21 (ASTM, 2021).
- Identify "other environmental features" (OEFs), defined for Phase I ESA purposes as existing or former site features or conditions that do not meet the ASTM

definition of a REC, CREC, or HREC but which warrant mention for visibility purposes in the context of acquiring and redeveloping the site.

1.3 APPROACH

The subject Phase I ESA was conducted in general accordance with the scope and limitations of ASTM E1527-21 (ASTM, 2021) and included:

- A review of relevant background information, including the history of the site and adjacent properties, past land use, and regional hydrogeological conditions.
- A review of topographic maps, aerial photographs, and environmental records pertaining to the site.
- A walkover survey of the site and vicinity on January 26, 2022.
- A review of potential offsite sources of contamination that could adversely impact the subsurface environment beneath the site, including a search of regulatory agency databases and visual surveys of adjoining properties.

The format of this Phase I ESA report is different from that recommended by ASTM; however, all of the elements required by ASTM E1527-21 are included or otherwise addressed.

1.4 LIMITATIONS

This Phase I ESA was performed in general accordance with the scope and limitations of ASTM E1527-21 (ASTM, 2021) and the standard of care customary in the environmental consulting industry as of the date of this report. Key dates in the Phase I ESA process were as follows:

Key Phase I ESA Dates		
Task	**Responsible Party**	**Date**
Database Search	EDR	01/12/22
Site Inspection	Avocet	01/26/22

The conclusions in this Phase I ESA report are based on the information available to Avocet from the sources cited; however, Avocet makes no warranty regarding the accuracy or completeness of this information. Moreover, this Phase I ESA specifically excludes any evaluation of geotechnical conditions, seismicity, flooding hazards, or the possible impact (if any) of electromagnetic fields associated with onsite or nearby electrical facilities. Also, this report cannot and does not include any evaluation of undocumented activities at the site or on adjacent or nearby properties. The exclusions noted above should not be interpreted to mean that every other condition or potential condition has been considered in the subject Phase I ESA.

Avocet conducted the Phase I ESA on behalf of B8 Myford II Industrial Owner LLC for decision-making in the context of possibly purchasing and redeveloping the site for commercial/industrial

purposes. B8 Myford II Industrial Owner LLC may rely upon the information in this Phase I ESA report until July 11, 2022, which is 180 days from the earliest of the key dates above. After July 11, 2022, certain components of this Phase I ESA should be updated, and after January 12, 2023, this Phase I ESA should be redone to maintain compliance with ASTM E1527-21 and EPA's AAI requirement. Avocet will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond these viability dates, or from unauthorized use by third parties.

1.5 REPORT ORGANIZATION

Including the introduction, this report is organized into six sections. Section 2.0 describes the various sources of information utilized in conducting the Phase I ESA. Section 3.0 presents a summary of relevant background and regional information. Section 4.0 describes the history and current condition of the site. Section 5.0 presents a summary of information gathered from a review of environmental databases maintained by local, state, and federal government agencies and describes the properties adjoining the site and selected nearby properties. Section 6.0 presents conclusions, in terms of identified RECs, CRECs, HRECs, and OEFs, and related recommendations.

Supporting information is contained in tables, figures, and six appendices, all of which follow the text of this report. Appendices A and B contain historical topographic maps and historical aerial photographs, respectively, annotated with the site boundary. Appendix C contains a Certified Sanborn® Map Report, although fire insurance map coverage of the site was not available. Appendix D is a City Directory report summarizing entries recorded in business, telephone, and other directories. Appendix E contains photographs of the site taken during Avocet's January 26, 2022 walkover survey. Appendix F is a report summarizing information available from a review of environmental databases maintained by local, state, and federal government agencies.

2.0 SOURCES OF INFORMATION

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps, historical aerial photographs, a walkover survey of the site, records available at selected local and state regulatory agencies, environmental databases maintained by local, state, and federal government agencies and other records available from commercial and online sources.

2.1 TOPOGRAPHIC MAPS

To evaluate the history of the site and past land uses, Avocet obtained copies of historical U.S. Geological Survey (USGS) topographic maps from EDR. The maps, which were published between 1896 and 2018 and which EDR marks up with the approximate site boundary, are included in chronological order in Appendix A.

2.2 AERIAL PHOTOGRAPHS

To further evaluate the site's history, Avocet obtained a "Decade Package" of historical aerial photographs from EDR. EDR's Decade Package typically includes at least one aerial photograph from each decade from the 1920s through the present day. For the subject project, EDR provided aerial photographs taken between 1938 and 2016. The photographs, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix B.

2.3 FIRE INSURANCE MAPS

At Avocet's request, EDR conducted a search for Sanborn® insurance map coverage of the site and vicinity; however, EDR reported that the site is an "unmapped property." A copy of EDR's report to that effect is included as Appendix C.

2.4 CITY DIRECTORIES

Telephone and business directories have been published for cities and counties across the United States since the 1700s and often contain potentially useful information on past land uses and the types of business that operated at individual street addresses. EDR extracts information from such directories and consolidates it in its "EDR-City Directory Image Report," a copy of which is included as Appendix D to this report.

2.5 WALKOVER SURVEY AND INTERVIEWS

Avocet personnel conducted a walkover survey of the site and vicinity on January 26, 2022 accompanied by Mr. Steve Siciliani, the owner of Woodbridge Glass and part of the site ownership entity. Selected photographs taken during the walkover survey, with Mr. Siciliani's permission, are included in Appendix E. During the walkover survey, Avocet interviewed Mr. Siciliani about the site's recent past history, in particular the storage and use of potentially hazardous substances and the generation of related hazardous wastes. The information provided by Mr. Siciliani is included, where appropriate, throughout this report.

2.6 GOVERNMENT DATABASES

EDR conducted a government records search to document potential sources of contamination at or near the site. The search included databases maintained by federal, state, and local agencies for the site and for other properties within ASTM-standard radii of the site. The records search is summarized in Section 5.0, and a copy of "The EDR Radius Map™ Report with GeoCheck®" is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

2.7 RECORDS AVAILABLE ONLINE

Avocet searched the GeoTracker and EnviroStor websites maintained by the California Environmental Protection Agency (CalEPA) for additional environmental records pertaining to the subject site as well as records pertaining to selected nearby properties. Relevant information from this research is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.8 INFORMATION FROM REGULATORY AGENCIES

On January 14, 2022, Avocet contacted selected federal, state, and local regulatory agencies to determine whether they may have potentially relevant environmental records pertaining to the site, including, in particular, records relating to USTs, aboveground storage tanks (ASTs), environmental permits, enforcement orders, reports and correspondence related to site investigation/assessment, soil sampling, monitoring, cleanup/remediation, removal actions, closures, or any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Avocet's interactions with them were as follows:

- Avocet searched the EPA MyProperty online portal for records related to the subject site address. Avocet notes the MyProperty portal requires an exact, "letter by letter" address match, including abbreviations and punctuation, so Avocet searched for various forms of the 14321 Myford Road address and obtained records pertaining to hazardous waste generation. In brief, the information available on MyProperty was consistent with information obtained from other sources.

- A written records request was faxed to the California Department of Toxic Substances Control (DTSC) office in Cypress; however, as of the date of this report, DTSC has not yet responded to this request.

- A written request was emailed to the Santa Ana Regional Water Quality Control Board (SARWQCB), which responded on January 18, 2022 that it does not have any records responsive to Avocet's request.

- An online records request form was submitted through the Orange County Health Care Agency (OCHCA) website. OCHCA responded on January 18, 2022 with records pertaining to routine hazardous waste generator inspections. Most of the

inspection results indicated that Woodbridge Glass-Werner Systems was operating within regulatory standards. Minor violations that were administrative in nature were noted on a few occasions.

- An online records request form was submitted through the Orange County Fire Authority (OCFA) website. OCFA responded on January 14, 2022 by emailing Avocet its records, which included a list of permits that Woodbridge Glass maintains.

- An online records request form was submitted through the Orange County Sanitation District (OCSD) website. In an email dated January 19, 2022, OCSD indicated it does not have any records responsive to Avocet's request.

- A request form was submitted to South Coast Air Quality Management District (SCAQMD), which responded with records related to permitting and permitted equipment.

The records obtained from the agencies listed above are referenced and/or integrated, as appropriate, throughout the remainder of this report.

2.9 Oil and Gas Records

To assess the possible presence of oil and/or natural gas wells at or in the vicinity of the site, Avocet reviewed information available online from the California Geologic Energy Management Division (CalGEM). The findings of this review are summarized in Section 3.4.

2.10 Radon Gas Records

To assess the possible presence of naturally occurring radon gas in the subsurface in the site vicinity, Avocet reviewed data available through the EPA and the California Department of Public Health (CDPH). Radon gas data were also included in the EDR Radius Map Report (Appendix F). The available radon gas data are summarized in Section 3.5.

3.0 BACKGROUND AND REGIONAL INFORMATION

Background and regional information considered relevant to the subject Phase I ESA includes nearby surface water features, the site's physiographic setting, and regional geologic and hydrogeologic conditions.

3.1 PHYSIOGRAPHIC SETTING AND DRAINAGE

The subject property is located on the Coastal Plain of Orange County. The Coastal Plain covers approximately 350 square miles and is bounded by the Pacific Ocean to the west-southwest and consolidated rocks of the Chino and Puente hills to the north, the San Joaquin Hills to the south, and the Santa Ana Mountains to the east.

The ground surface in the site vicinity is at around 69 feet above mean sea level and generally slopes to the south southwest, toward Upper Newport Bay. The closest surface water body to the site is Irvine Channel, a concrete-lined drainage channel that passes within approximately 600 feet east of the site at its closest approach. However, Irvine Channel is not considered especially relevant for Phase I ESA purposes.

3.2 REGIONAL GEOLOGY

The site is located within the Los Angeles Basin, a geologic structure that evolved through five major phases: pre-depositional (basement rocks), pre-basin deposition (late Cretaceous through lower Miocene rocks), basin inception (middle Miocene), principal subsidence and deposition (upper Miocene and lower Pleistocene), and basin disruption (upper Pleistocene through Recent deposits). The basement rocks of the pre-depositional phase are composed of metamorphosed sedimentary and volcanic rocks, partially intruded by plutonic rocks. The upper Cretaceous rocks of the pre-basin phase of deposition are comprised of clastic marine sedimentary deposits beneath shallow marine and non-marine clastic sedimentary deposits of the Paleocene to early Miocene. The middle Miocene rocks of the basin-inception phase include a various succession of marine clastic and sedimentary rocks, interbedded with volcanic rocks. The late Miocene to early Pleistocene rocks of the principal subsidence and deposition phase are comprised of primarily sandstone and siltstone, with some conglomerate, shale, and fine-grained biogenic sediment. Finally, the late Pleistocene to recent rocks of the basin-disruption phase are comprised of lagoonal marine and non-marine deposits overlain by non-marine gravel, silt, and sand.

The Los Angeles Basin can be divided into four structural blocks, primarily designated by their basement blocks and superjacent sedimentary packages. The four blocks are referred to as the Northwestern, Southwestern, Northeastern, and Central Blocks. The subject site is located in the southeastern portion of the Central Block, which encompasses the area northwest of the Newport Inglewood Fault Zone, extending north to the Santa Monica Mountains, east to the Puente Hills, and southeast to the Santa Ana Mountains and San Joaquin Hills.

3.3 HYDROGEOLOGY

The subject site is located within the Orange County Groundwater Basin (the Basin), which underlies the Coastal Plain mentioned above. The Basin is divided into three regional subbasins: the Yorba Linda, Main, and Irvine subbasins. The site is located in the western portion of the Irvine subbasin and is bounded by the Santa Ana Mountains to the east, the San Joaquin Hills to the south and southwest, and the Costa Mesa Freeway to the north.

The Basin includes numerous aquifers separated to varying degrees by lower permeability sediments. Groundwater in these aquifers is utilized for municipal drinking and agricultural purposes, but most production wells in the Irvine area are screened deeper than 200 feet below ground surface (bgs). The uppermost, Shallow Aquifer System or "semiperched" aquifer, which extends from the surface to approximately 160 feet bgs, is more relevant for Phase I ESA purposes. Groundwater in the Shallow Aquifer System is generally considered hard and brackish and typically is not used directly for agricultural or municipal purposes, although there is evidence that it is in communication with deeper aquifers that have direct beneficial uses. Investigations by Orange County Water District related to its South Basin Groundwater Protection Project have shown that the Shallow Aquifer System is very complex in terms of the occurrence and movement of groundwater, both laterally and vertically. In brief, there are several relatively discrete water-bearing zones within 150 feet of the ground surface, with varying degrees of hydraulic communication between them. However, some of these water-bearing zones are laterally discontinuous, and the movement of groundwater is further complicated by the likely presence of buried stream channels filled with more permeable sediments that provide "paths of least resistance" for groundwater and contaminant migration. In broad terms, however, groundwater in the Shallow Aquifer System generally flows to the southwest, toward Upper Newport Bay.

As far as Avocet is aware, no intrusive investigations have been conducted at the subject site; however, the southwest-adjoining property, at 14351 Myford Road (Section 5.4), was investigated between 1983 and 1996 and subsurface conditions beneath the site are assumed to be similar. The property at 14351 Myford Road is underlain by an approximately 10-foot layer of clay overlying silty sand. Another thin clay layer is present at approximately 25 feet bgs; however, this clay layer may be laterally discontinuous as it was only encountered in two of six well borings (D'Appolonia, July 11, 1983). Shallow groundwater was encountered at 14351 Myford Road at between 6 and 10 feet bgs and flows to the south-southwest (Geosystem Consultants, Inc., July 31, 1996).

3.4 OIL, GAS, AND GEOTHERMAL WELLS

According to CalGEM, records available online, the site is not within or near the administrative boundary of an oil field. The nearest oil well to the site is a "plugged dry hole" located approximately 1,000 feet to the east-southeast. According to the available records, the "Irvine 63-1" well was completed on June 18, 1949 but never produced any oil and was abandoned on July 18, 1949, shortly after being drilled (California Division of Oil and Gas, August 10, 1949). No other oil or gas wells, abandoned or active, are located within 1 mile of the subject site. As such, it is unlikely that the subject site has been impacted by historical oil production operations in the area.

3.5 RADON GAS

EPA recommends avoiding long-term exposure to radon levels greater than 4 picocuries per liter (pCi/L). CDPH maintains indoor radon test result records for California sorted by zip code (CDPH, February 2016). In brief, indoor radon measurements were performed throughout the state, and the percentage of buildings with reported radon levels greater than 4 pCi/L within each zip code was reported, along with the number of buildings tested. Of the 42 buildings tested for radon within the 92780 zip code in which the subject site is located, only one contained radon at above 4 pCi/L. In addition to the above, the EPA and the USGS maintain a Map of Radon Zones for the United States, organized by county (EPA, 2016). According to the map, Orange County is a Radon Zone 3, indicating that radon levels in buildings are expected to be below 2 pCi/L. EDR's Radius Map Report (Appendix F) indicates that the average radon activity on the ground floor of residential structures within Orange County was 0.763 pCi/L, which is less than EPA's recommended maximum exposure level. Based on the above, naturally occurring radon is unlikely to be of concern in the vicinity of the site.

4.0 SITE HISTORY AND CURRENT CONDITION

This section documents the history and current condition of the site, with emphasis on current or former environmental features.

4.1 SITE HISTORY

The history of the site and vicinity has been compiled based on information from the sources outlined in Section 2.0, particularly the historical aerial photographs and topographic maps. For discussion purposes, the site's history has been divided into sections based on the principal land uses within the site boundary with, to the extent known, the approximate date ranges.

4.1.1 Agricultural Land Use, <1938 to ~1980

The earliest records reviewed for Phase I ESA purposes were topographic maps published in 1896, 1901, and 1902 (Appendix A). These near-identical maps show that the subject site was undeveloped, as was much of the surrounding area, although the area may have been agricultural at the time. Tustin is shown on the maps as a few dozen residences around the beginnings of a street grid approximately 0.8 mile to the northwest of the site. The Los Angeles branch of the Atchison, Topeka, and Santa Fe (AT&SF) Railway is shown running northwest-southeast, approximately 1 mile southwest of the site at its closest approach. Topographic maps published in 1932 and 1935 (Appendix A) show that the street grid had been expanded outward from "downtown" Tustin, and many of the existing roads, including Myford Road, were depicted, although Myford Road's alignment was different, and it did not yet extend as far west as the subject site. Rather, the site appears to have been in an area (known to have been agricultural from a 1938 aerial photograph) bounded and crisscrossed by dirt roads. A portion of historical Highway 101 ran along the existing Santa Ana (5) Freeway alignment, approximately 0.5 mile northeast of the site. Irvine Channel, now a concrete-lined drainage channel, is shown on the 1932 and 1935 maps as an unlined channel, although its alignment does not appear to have changed significantly since then. The larger Peter's Canyon Wash is shown on both maps flowing northeast to southwest, approximately 0.4 mile southeast of the site at its closest approach. Small structures, assumed to have been residential or agricultural, were scattered throughout the area, however, there were none within or near the subject site boundary.

The earliest aerial photograph reviewed for Phase I ESA purposes was taken in 1938 (Appendix B) and shows that the site and surrounding area were agricultural. More specifically, the site included parts of four larger fields planted with grass or other ground crop(s). To the southwest of the site, a small agricultural reservoir is visible in the 1938 photograph. Further afield, Highway 101 was visible to the northeast of the site and the AT&SF Railway was visible to the southwest. The unlined precursor to present-day Irvine Channel was also visible in the 1938 photograph. A topographic map published in 1942 (Appendix A) provides no additional information of use for Phase I ESA purposes, but an aerial photograph taken in 1946 (Appendix B) clearly shows that the site and the surrounding area were still planted with grass or other ground crop(s). The reservoir is clearly visible to the west-southwest of the site, as was a tall adjacent feature that could have been a wind turbine to power the well pump or a power pole. To the south of "old" Myford

Road, then still unpaved, vegetation patterns suggest that Peters Canyon Wash periodically flooded.

Topographic maps published in 1948 and 1950 (Appendix A) show that the site was still unimproved and not accessible by paved roads. The street grid around the site had not evolved much, but to the west, on the far side of the AT&SF railroad track, a Naval Reservation had been constructed. Established in 1942 and originally known as the Naval Lighter Than Air (NLTA) Station, the Naval Reservation featured two huge "blimp" hangars that have become local landmarks. Avocet notes that the NLTA was commissioned during World War II to support the United States Navy's coastal patrol effort and operated as such until 1949. The facility was reactivated in 1951 as Marine Corps Air Facility Santa Ana to support the Korean War. More recently, it became known as Marine Corps Air Station Tustin and operated as a helicopter base. Aerial photographs taken in 1952, 1963, and 1972 (Appendix B) show no significant change in land use within or around the site apart from Irvine Channel being rerouted into Peters Canyon Wash approximately 1.5 miles southeast of the site between 1952 and 1963.

Although not visible in the aerial photographs, a topographic map published in 1965 (Appendix A) shows a water well southwest of the subject site and annotates an adjacent structure as "*Res*" for reservoir. The 1965 map shows that the well and the reservoir were accessed via a dirt road from Myford Road, which also was unpaved. Two tall, slender structures located adjacent to the reservoir and visible in the 1952 photograph are assumed to have been wind turbines or power poles. To the northeast of the site, Highway 101 had been widened and renamed the Santa Ana (5) Freeway by 1965. An aerial photograph taken in 1974 and erroneously included in EDR's topographic map report (Appendix A) appears to show present-day Myford Road and the surrounding streets under construction, although none of the existing buildings had been built and the site and the surrounding properties appeared fallow and unimproved.

4.1.2 Wespercorp and SSi, ~1980 – 2003

It is not clear exactly when the existing building at the site was constructed; it is not shown on a topographic map published in 1981 (Appendix A); however, records obtained from SCAQMD include permits issued to Wespercorp at the site address in May 1980 and Wespercorp is the first occupant listed in EDR's City Directory (Appendix D), albeit in 1982.

Wespercorp appears to have started out making computer parts but later also manufactured biomedical and analytical instruments at the site. A facility equipment list obtained from SCAQMD indicates Wespercorp operated two vapor spray degreasers, which were first permitted on May 29, 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents with a maximum permitted "solvent loss" from each degreaser of 0.63 gallon per day. Both degreasers measured approximately 2-feet by 4 feet by 3 feet high, suggesting they were installed on the floor of the building, as opposed to on a bench top. The next City Directory listing for the site was for 1987 but did not indicate an occupant, possibly suggesting Wespercorp had vacated the site by this time. It is not clear exactly when, but at some point, SSi, which was later acquired by Texas Instruments, Inc., occupied the site in support of its wafer fabrication operations next door at the

southwest-adjacent property at 14351 Myford Road (Section 5.4). Avocet understands that SSi used the building as office space, although it is possible some soldering and/or other light manufacturing operations were conducted at the subject site. Specifically, SCAQMD provided permits for SSi to operate a boiler, a soldering machine, and an oven at 14321 Myford Road; however, this equipment may have been installed 14351 Myford Road with 14321 Myford Road used as the mailing address.

As noted above, the existing building at the site is not shown on a topographic map published in 1981 (Appendix A), although it appears to have been built in or before 1980. The 1981 topographic map does, however, show the present-day Myford Road alignment with the original Myford Road, since replaced by Jamboree Road, to the southeast. Avocet understands that for a time there were references to "old" and "new" Myford Road, but these prefixes appear to have been dropped when Jamboree Road replaced "old" Myford Road. The 1981 map also shows a few new commercial or industrial buildings on nearby lots, including the former Tungsten Carbide Manufacturing (TCM) facility at 14451 Myford Road (Section 5.7.1). An aerial photograph taken in 1985 (Appendix B) shows the existing building at the subject site with the former SSi facility adjoining to the southwest. The 1985 photograph also shows commercial buildings on the surrounding lots, although the adjoining property to the northeast was a parking lot. Although difficult to discern from the 1985 aerial photograph, but depicted on the 1981 map in Appendix A, a single railroad track ran along the rear (northwestern) boundary of the site, although there are no indications any of the subject site occupants ever used it. The 1985 photograph shows that the land on the southeast side of (new) Myford Road was still agricultural at the time, as was the land further to the southeast. The only other undeveloped areas in the site vicinity in 1985 were to the northwest, across the railroad track, and to the southwest, between the former SSi and TCM facilities.

Topographic maps published in 2012, 2015, and 2018 (Appendix A) provide no land use information of use for Phase I ESA purposes. Aerial photographs taken in 1989 and 1994 (Appendix B) show no obvious change in conditions at the site although by 1989, the fallow former agricultural parcel between the former SSi and TCM facilities had been paved for TCM employee parking, and by 1994, the formerly fallow area across the railroad track to the northwest of the site had also been paved for parking. An aerial photograph taken in 2002 (Appendix B) shows no obvious change in conditions at or around the site other than that the former agricultural area on the opposite (southeast) side of Myford Road had been developed with the existing buildings.

4.1.3 Woodbridge Glass – Werner Systems, Inc., 2003 - Present

Mr. Siciliani indicated during the walkover survey that he purchased the subject site from Texas Instruments, Inc., the successor in interest to SSi, for his glass business in 2003 and has operated at the site ever since. Aerial photographs taken after 2003 reflect the outdoor storage of aluminum and other dry materials in the paved areas around the existing building but provide essentially no additional information of use for Phase I ESA purposes. An aerial photograph taken in 2005 (Appendix B), however, shows that the 261 Toll Road had been constructed approximately 1,000 feet to the southeast of the site and immediately southeast of the Irvine Channel. Subsequent aerial photographs, taken in 2009, 2012, and 2016 (Appendix B), show no discernible changes in

land use at or around the site, although a few small "infill" parcels adjacent to the now much widened Santa Ana Freeway were developed between 2005 and 2009.

4.2 CURRENT SITE CONDITIONS

Avocet conducted a walkover survey of the site on January 26, 2022 to visually assess current conditions. Selected photographs taken during the survey are included in Appendix E and are referenced, where appropriate, below. In brief, the subject site features a single-story building with a footprint of approximately 60,000 square feet surrounded by asphalt pavement used for employee parking and outdoor storage (Figure 3). The property is accessible via two driveways, one in the northeast corner of the property and one in the southeast corner (Photographs E-1 and E-2)

4.2.1 Outdoor Areas

The areas outside the building to the southeast and southwest are used for employee and visitor parking (Photograph E-3). The areas along the northeastern side of the building and behind the building to the northwest are used to store aluminum stock and wooden pallets (Photograph E-4). Storage containers stacked in the southwest corner of the site are used to store more dry materials (Photograph E-5). Immediately east of the storage containers are numerous recycle and waste bins (Photograph E-6), all of which were empty at the time of Avocet's walkover survey. A woodworking area is located immediately outside the northwest corner of the building. A covered canopy is located along the southwestern wall of the building, under which is a lumber saw (Photograph E-7). Immediately southeast of the canopy along the southwestern side of the building is a three-sided, covered metal structure used for painting. The floor of the building is covered with plywood sheets with obvious paint overspray. Cans of paint were stacked throughout the metal structure (Photographs E-8 and E-9). Avocet did not observe any floor drains or other subsurface infrastructure in the outdoor areas of the site and, according to Mr. Siciliani, no such subsurface infrastructure exists at the site.

4.2.2 Workshop

The workshop occupies approximately the northwestern half of the building. The floor throughout workshop is of sealed concrete, which appeared to be in good condition during Avocet's walkover survey, and the space is open to the underside of the uninsulated roof, with the roof beams and joists exposed (Photograph E-10). The central part of the workshop is open and used for cutting aluminum bar stock to make frames for windows, which will eventually be installed in commercial buildings. Mr. Siciliano indicated that the subject site is used to manufacture all of Woodbridge Glass's frames; however, the frames are transported to another nearby facility to have the glass installed. Most of the main floor of the workshop is occupied by machine tools used to cut and shape metal, including shearing machines, laser cutters, and the like. Aluminum sheeting and bar stock are stored on pallets throughout the workshop (Photographs E-10, E-11, and E-12). Waste aluminum is collected in large bins to be recycled (Photograph E-13). Woodbridge Glass uses limited quantities of potentially hazardous chemicals in its operations, including gasoline and diesel fuel, oil, silicone-based lubricants, synthetic cutting oil, and isopropanol. The gasoline and diesel fuel are used in generators and forklifts. Avocet did not observe the storage of these items

onsite at the time of the walkover survey, and Mr. Siciliani indicated if these liquids are stored onsite, they are typically in 1-gallon containers to top off equipment. Other liquid chemicals are stored onsite in containers ranging from 1-gallon bottles to 55-gallon drums. During the walkover survey, Avocet observed liquid wastes being accumulated in containers ranging from 1 to 55 gallons on plastic secondary containment trays (Photograph E-14). These liquid wastes are transported offsite for disposal or to be recycled; there is no onsite treatment. In addition to liquid chemicals, Woodbridge Glass utilizes inert gases in its operations, with cylinders stored in the workshop area (Photograph E-15

In the southwestern corner of the building are two storage rooms. The larger of the two was being used to store miscellaneous items, including ladders, tables, empty boxes, fans, and other items (Photograph E-16) at the time of Avocet's walkover survey. The smaller storage room was being used to store shop vacs, fire extinguishers, filing cabinets, and boxes of various materials (Photograph E-17). A storage cage is located along the eastern wall of the main workshop area, which contains items similar to those observed in the storage rooms (Photograph E-18). In addition to these storage rooms and the main workshop floor, a welding shop is located in the northwest corner of the building (Photograph E-19).

4.2.3 Offices and Music Studio

The front or southeastern portion of the building is built out as office space and breakrooms (Photograph E-20). In addition, Mr. Siciliani has converted space in the southern portion of the building into a music studio for his band (Photograph E-21). Floor coverings in the office area were mostly carpeted with vinyl floor tiles in the hallways and a breakroom. The floor tiles were generally in good condition. Similarly, the interior paint in the building was generally in good condition, with no signs of peeling.

4.3 ASTM E1527-21 Features

ASTM E1527-21 includes a list of potential environmental features, such as USTs, ASTs, sumps, and the like, that are to be addressed in a Phase I ESA for a commercial or industrial property. The presence or absence of these features is summarized below with, where appropriate, a reference to the section of text in which they are described.

Potential Environmental Feature or Condition	Absent	Present	Comments
Hazardous substances and petroleum products in connection with identified uses		✓	Containers of waste oil cutting oil; fuel and oil in equipment. Section 4.2
Storage tanks	✓		
Strong, pungent, or noxious odors and their sources	✓		
Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products	✓		
Drums, totes, and intermediate bulk containers		✓	Cutting oil, lubricants. Section 4.2.
Hazardous substance and petroleum product containers not in connection with identified uses		✓	Cutting oils and lubricants for metal cutting machinery. Section 4.2.
Unidentified substance containers	✓		

Potential Environmental Feature or Condition	Absent	Present	Comments
Polychlorinated biphenyl (PCB)-containing items	✓		None known or observed
Heating/Cooling		✓	Heating and cooling systems in building
Stains or corrosion on floors, walls, or ceilings (except water stains)	✓		
Drains and sumps	✓		
Pits, ponds, or lagoons	✓		
Stained soil or pavement	✓		
Stressed vegetation (other than from lack of water)	✓		
Solid waste		✓	Municipal solid waste and recyclables such as aluminum and wood scraps. Section 4.2.
Water/wastewater	✓		None other than sanitary wastewater
Wells	✓		
Septic systems or cesspools	✓		

4.4 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

So far as Avocet is aware, there do not appear to have been any previous environmental investigations targeted at operations or potential contaminant source areas within the site boundary.

5.0 ADJOINING AND NEARBY PROPERTIES

This section summarizes a search by EDR of environmental databases and describes properties adjoining the subject site and selected nearby properties. The descriptions of adjoining and selected nearby properties are based on Avocet's familiarity with a few properties in the area, observations from public rights-of-way, information included in EDR's report (Appendix F), and information available from the GeoTracker and EnviroStor websites maintained by CalEPA.

5.1 DATABASE LISTINGS

EDR's search encompassed over 90 databases maintained by local, state, and federal government agencies, including all of the databases required to be searched per ASTM E1527-21 §8.2.2. The target property address of 14321 Myford Road was used for records search purposes.

EDR's January 12, 2021 Radius Map Report with GeoCheck®, which is included in Appendix F, identifies multiple database listings for the site and for offsite properties within ASTM-recommended search radii. These listings are summarized in Table 1, but in the interest of providing a concise review and making relevant information more accessible, the following summaries focus on those database listings considered potentially relevant to the objectives of the subject Phase I ESA, specifically those pertaining to the subject site and to nearby properties with documented hazardous substance releases with the potential to have impacted the site. Other properties/database listings not considered indicative of a hazardous substance release, database listings for hydraulically downgradient properties, and database listings with "Completed – Case Closed" status have generally been screened out. It is noted in this regard that inclusion in certain of the databases searched by EDR is not, in and of itself, an indication that hazardous substances have been released or that the subsurface beneath the properties is contaminated. For example, inclusion in the HAZNET or similar databases indicates that a facility generates hazardous waste, but the generator is following the proper manifest procedures. Similarly, the fact that USTs or ASTs are or were operated at a property and were registered with the state is not, in and of itself, of concern unless the tanks(s) had leaked, in which case the property should be included in other databases.

5.2 TARGET PROPERTY LISTINGS

Spelling errors and/or different uses of abbreviations and punctuation often result in multiple listings in the same databases. The database listings for the target property addresses, complete with spelling errors, are as follows:

Address	Company	Database	Comment
14321 Myford Road	Not listed	CHMIRS	Pertains to 1-gallon spill of hydraulic fluid from a delivery truck in 1995
14321 Myford Rd	Werner Systems Inc.	RCRA NonGen/NLR	Indicates the company was not generating hazardous waste in 2012, hence "no longer regulated" (NLR)
14321 Myford Rd	Woodbridge Glass Inc.	CERS HAZ WASTE	Pertains to the generation of unspecified hazardous waste
		HAZNET	Pertains to the generation of solid and liquid hazardous waste in 2012
		CERS	Pertains to permitted chemical storage, with several administrative violations
		HWTS	Pertains to hazardous waste generator number CAC002684439
14321 Myford Road	Silicon Sys Corp	EMI	Pertains to regulated air emissions of NOX, SOX, and CO, possibly at 14351 Myford Road
14321 Myford Rd	Werner Systems Inc.	HWTS	Pertains to the generation of unspecified hazardous waste
14321 Myford Rd	Werner Systems Inc.	HAZNET	Pertains to the generation of hazardous waste in 2013 through 2019
		HWTS	Pertains to hazardous waste generator number CAL000378643
14321 Myford Rd	Woodbridge Glass	ECHO	Pertains to listings in other databases
14321 & 14351 Myford Rd	Silicon Sys Corp	EMI	Pertains to regulated air emissions of hydrocarbon gases, NOX, SOX, and CO possibly at 14351 Myford Road
14321 Myford Rd	Werner Systems Inc.	FINDS	Pertains to listing as hazardous waste generator
		ECHO	Pertains to the generation of unspecified hazardous waste
14321 Myford Rd	Woodbridge Glass	HAZNET	Pertains to the generation of hazardous waste in 2008
		HWTS	Pertains to hazardous waste generator number CAC002626870
14321 Myford Rd	Woodbridge Glass Inc.	HAZNET	Pertains to the generation of hazardous waste in 2010
		HWTS	Pertains to hazardous waste generator number CAC002650937

In brief, the target property listings summarized above are consistent with Avocet's understanding of the site's history and none suggest site conditions or features beyond those documented elsewhere in this report.

5.3 Adjoining Property to the Northeast

The site is bounded to the northeast by a paved parking lot for the multi-tenant commercial building at 14191 Myford Road (Figure 2). The 14191 Myford Road address is listed in the RCRA-SQG, SCRA-LQG, CERS HAZ WASTE, and CERS databases under Avid Bioservices, Inc. Based on the listings, Avid Bioservices, Inc. has disposed of various spent nonhalogenated solvents from

biomanufacturing operations. An inspection summary from OCHCA indicates that hazardous materials used onsite include liquid nitrogen, liquid carbon dioxide, liquid oxygen, nitrogen gas, ammonium sulfate, and sodium hydroxide. There are no indications any of these chemicals have been spilled or otherwise released, and the address does not feature on the EnviroStor or GeoTracker websites maintained by CalEPA. As such, and absent additional information to the contrary, there is no reason to suspect operations at 14191 Myford Road are likely to have impacted the subject site.

5.4 ADJOINING PROPERTY TO THE SOUTHWEST

The site is bounded to the south by a multi-tenant commercial building at 14351 Myford Road and listed in the RCRA-SQG, CA FID UST, HIST UST, ENVIROSTOR, UST, and SWEEPS UST databases under SSi and Texas Instruments. Avocet personnel are familiar with this property and note that SSi, the original owner, was acquired by TDK and, later, Texas Instruments. In brief, SSi manufactured silicon wafers in a "wafer fab" area inside the building, with related support facilities in a service yard that wrapped around the northeast and northwest sides of the building. The support facilities, which were expanded over the years, included, among other things, chillers, cooling towers, air scrubbers, a deionized water system, and ASTs for deionized water, oxygen, hydrogen, and inert gas (Rasmussen, Ingle, Anderson, May 20, 1981). SSi also operated USTs, most if not all in concrete secondary containment vaults, for hydrofluoric acid, solvent and hydrofluoric acid waste accumulation, acid wastewater mixing, and acid wastewater neutralization. The two 2,000-gallon solvent waste storage tanks were in a concrete vault outside the northeast corner of the building, adjacent to the subject site, and the acid-related USTs were in concrete vaults in the service yard to the northwest of the building (Rasmussen, Ingle, Anderson, May 20, 1981). Avocet understands the solvent waste was primarily water (at least 60 percent) containing acetone, 1,1,1-TCA, xylenes, and isopropyl alcohol. SSi emptied the two solvent waste tanks on an as-needed basis using a vacuum truck. The hydrofluoric acid waste was neutralized onsite and discharged to the sanitary sewer system under a tiered "Permit by Rule" permit. The support facilities were connected to the manufacturing processes inside the building via subsurface and aboveground pipelines.

Avocet personnel, while with previous companies, provided environmental consulting services to SSi and Texas Instruments, its successor in interest. In particular, Avocet personnel installed six groundwater monitoring wells at the former SSi facility and conducted periodic groundwater monitoring until 1996, when SSi decided to consolidate its manufacturing capabilities at another location, decommission its older manufacturing facilities in Tustin, and restore the building to its original condition. In particular, Avocet personnel investigated subsurface conditions after solvent waste from one of the USTs leaked into the secondary containment structure; however, impacts to the surrounding soil and groundwater were negligible. Pursuant to SSi's decision to close its Tustin facility, the USTs and other subsurface infrastructure were removed in 1996. Avocet personnel conducted confirmation soil matrix sampling in conveyance piping trenches and beneath the USTs and secondary containment vaults to evaluate the impact, if any, of SSi's operations on the subsurface environment. The confirmation soil matrix sampling results did not indicate the presence of significant soil impacts, and a final groundwater monitoring event in 1996 confirmed that groundwater had not been significantly impacted by SSi's operations or decommissioning

activities. The groundwater monitoring wells at the site were subsequently destroyed and the building was converted back to its original use as office space, and the building has operated as such since then.

Based on Avocet's past involvement at the former SSi property, there was never a suggestion that SSi's operations were likely to have impacted the subject site, which is hydraulically upgradient based on groundwater flow to the south.

5.5 ADJOINING PROPERTIES TO THE SOUTHEAST

The site is bounded to the southeast by Myford Road, across which are additional commercial properties. From north to south, these properties include O'Neill Clothing and La Jolla Group at 14350 Myford Road and Access Lighting Corporation at 14410 Myford Road (Figure 2). O'Neill Clothing and La Jolla Group are apparel companies. Access Lighting Corporation manufactures lighting products for both indoor and outdoor household uses. The 14350 Myford Road address is not listed in any of the databases searched by EDR. While the company itself is not listed in any of the databases searched by EDR, the address of 14410 Myford Road is listed in the RCRA-SQG database under Unisen, Inc. However, none of the businesses or addresses mentioned above feature on the GeoTracker or EnviroStor websites, and absent additional information to the contrary, there is no reason to suspect that operations at these southeast-adjoining properties are likely to have impacted the subject site.

5.6 ADJOINING PROPERTIES TO THE NORTHWEST

The site is bounded to the northwest by PVP Advanced EO Systems at 14312 Franklin Avenue and Young's Market Company Express at 14352 Franklin Avenue. The 14312 Franklin Avenue address is listed in the RCRA-SQG, FINDS, ECHO, RCRA NonGen/NLR, CERS HAZ WASTE, HAZNET, CERS, and HWTS databases. These listings pertain to the generation of small quantities of hazardous waste, including oil-containing waste, organic solids, and various unspecified aqueous solutions. The 14352 Franklin Avenue address is listed in the RCRA-SQG database for the generation of hazardous wastes under Heads Up Industries, assumed to have been a previous occupant. Neither of the 14312 or 14352 Franklin Avenue addresses feature on the EnviroStor or GeoTracker websites, and absent additional information to the contrary, there is no reason to suspect that operations at these northwest-adjoining properties are likely to have impacted the subject site.

5.7 OTHER NEARBY PROPERTIES

Based on readily available information, the following offsite properties are considered potentially relevant for Phase I ESA purposes.

5.7.1 Former Tungsten Carbide Manufacturing (TCM), 14451 Myford Road

The former TCM facility at 14451 Myford Road is located approximately 0.155 mile southwest of the subject site (Figure 2). The former TCM property, which was subsequently occupied by Pacific Bell and then AT&T, consists of two lots and is currently being redeveloped with a new warehouse. In the past, the property featured a building with a footprint of approximately

103,000 square feet, which TCM used to manufacture drilling equipment and tools for the oil exploration industry. Equipment used in TCM's manufacturing operations through the 1980s included at least four ovens, two grinding and drying systems, a spray booth, and a degreaser. In addition, TCM also stored waste oil in a 300-gallon UST and operated two industrial wastewater clarifiers, all of which were located outside the southwest wall of the building. The two clarifiers were used to remove solids from waste and process water prior to discharge to the sanitary sewer system.

In August 1986, TCM removed the waste oil UST and observed oily water and discolored soil with a strong hydrocarbon odor in the tank excavation. Approximately 100 gallons of oily water were reportedly removed from the tank excavation and transferred to 55-gallon drums for disposal. Soil samples collected from the UST excavation contained elevated concentrations of total petroleum hydrocarbons (TPH) and detectable concentrations of chlorinated volatile organic compounds (VOCs), notably tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1,1-TCA, and their degradation byproducts. Subsequent soil and groundwater investigations indicated that the chlorinated VOCs had likely leaked from the two wastewater clarifiers, which were removed in January 1988. The UST and clarifier removals were conducted with oversight from OCHCA; however, SARWQCB later became the lead regulatory agency. Additional soil and groundwater investigations indicated that releases from the wastewater clarifiers and the waste oil UST had impacted shallow, "perched" groundwater, which was encountered at around 12 feet bgs and which flowed to the south. Consistent with this groundwater flow direction, the investigations showed that VOCs had migrated offsite beneath the adjoining property to the southwest, at the time occupied by SSi and used as office space.

Remedial efforts related to the former UST and clarifiers included soil removal via open excavation, the application of Fenton's Reagent to oxidize contaminants in soil beneath the building, and the installation and operation of a groundwater extraction and treatment (GET) or "pump and treat" system to inhibit contaminant migration and remove contaminant mass. The GET system operated between 1993 and 2002 and reportedly treated approximately 51.5 million gallons of groundwater and removed 31 pounds of VOCs. The treated water was reinjected after being treated. The GET system was shut down in 2002 after it was determined that VOC mass removal rates had reached asymptotic levels and groundwater monitoring indicated the size of the plume had been significantly reduced. Prior to closing the case, the SARWQCB requested that groundwater monitoring continue for a year after shutting down the GET system and that TCM assess possible vertical migration by investigating a deeper water bearing zone. Based on results of the above, SARWQCB issued a "no further action" (NFA) letter for the soil and groundwater impacts attributable to the former waste oil UST and clarifiers on April 27, 2004. Pursuant to the NFA letter, TCM dismantled the GET system and destroyed all of the groundwater extraction, injection, and monitoring wells at the site and on the adjoining SSi property.

According to the available records, Pacific Bell, the predecessor to AT&T, purchased the property from TCM in late 1987, while the GET system was still in operation. Pacific Bell installed two 12,000-gallon USTs at the site; one for gasoline and one for diesel fuel, for its fleet vehicles. Pacific Bell and AT&T operated these two USTs, which were located outside the northeast wall of the building, until 2003, when they were permanently closed by removal. The removed USTs

were observed to be in good condition, no odors or other indications of leakage were noted, and confirmation soil samples from the tank excavation indicated that the USTs had not leaked. Pursuant to the confirmation soil sample results, OCHCA issued an NFA letter for the two fuel USTs on March 27, 2006.

In October 2019, Avocet investigated residual vadose zone contamination at the former TCM facility ahead of its acquisition by B8 Myford Industrial Owner, LLC. Although impacts to soil were negligible, PCE, TCE, and other VOCs were detected in soil vapor at concentrations that warranted a passive vapor intrusion mitigation system (VIMS) for the new building. Between August and October 2021, B8 Myford Industrial Owner, LLC cleared the site of the former TCM building and other improvements and rough graded ahead of redevelopment with an approximately 219,000-square-foot warehouse. In conjunction with this work, Avocet assessed TCM's backfilled remedial excavation around the former UST and wastewater clarifiers for residual soil contamination and also visited the site periodically during rough grading. In brief, residual soil impacts around the former UST and wastewater clarifiers were negligible and no impacts were observed elsewhere at the property, including around the two AT&T fuel USTs. Redevelopment is currently in progress with Avocet providing oversight of the VIMS installation.

The former TCM facility is located hydraulically downgradient and, as such, related impacts to soil and/or groundwater beneath the subject site are highly unlikely. Despite the intervening distance, however, it is conceivable that VOCs in soil vapor attributable to releases from TCM's operations could have migrated beneath the subject site, albeit probably not at concentrations that would warrant a VIMS for new building at the subject site.

5.7.2 Schick Moving and Storage, 2721 Michelle Drive

The Schick Moving and Storage (Schick) facility is located approximately 0.2 mile north-northeast of the subject site at 2721 Michelle Drive. In December 1996, with oversight from OCHCA and OCFA, Schick removed five USTs from the southwestern portion of the property: a 10,000-gallon UST for gasoline, two 10,000-gallon USTs for diesel fuel, a 550-gallon UST for waste oil, and a 550-gallon UST for fresh oil. Soil impacts were observed during the UST removals and groundwater accumulated in the tank excavations. Confirmation soil matrix samples collected in conjunction with the UST removals contained elevated concentrations of benzene and methyl *tert*-butyl ether (MTBE), based on which, OCHCA opened a cleanup case. In January 1997, impacted soil was over-excavated and the excavations were backfilled with clean imported material. The original tanks were replaced with one 20,000-gallon diesel UST and two 550-gallon oil USTs; however, the locations of these USTs are not clear (OCHCA, August 7, 2006).

Four groundwater monitoring wells (Wells W1 through W4) were installed after the excavation of impacted soil to monitor groundwater conditions at the property. Subsequent sampling of three of the wells (Wells W1, W3, and W4) indicated the presence of TPH in the gasoline range, MTBE, and benzene in groundwater, which was measured at between 11 and 13 feet bgs. OCHCA requested additional sampling to delineate the extent of MTBE in groundwater. In February 1998, six Hydropunch™ borings were advanced to 20 feet bgs around the perimeter of the former UST area. Benzene, ethylbenzene, xylenes, and MTBE were detected in Hydropunch™ groundwater

grab samples at concentrations up to 250, 1,000, 930, and 290 micrograms per liter (µg/L), respectively. In addition, groundwater samples from Wells W1 and W3 contained MTBE at 340 and 1,300 µg/L, respectively. Based on the results of this sampling, OCHCA requested further investigation and expressed a lack of confidence in the integrity of the existing monitoring wells, as they did not conform to California well construction standards. OCHCA required that the nonconforming wells be destroyed and replaced with three new groundwater monitoring wells. In response, Wells MW-5, MW-6, and MW-7 were installed to the southwest, north, and east of the former UST pit, respectively, and the four original wells were destroyed in 2002 (OCHCA, August 7, 2006).

Additional site assessment was conducted in November 2005 to further delineate impacts to groundwater downgradient of Well MW-5. In brief, four direct-push borings were advanced to the west, northwest, southeast, and southwest of Well MW-5 and grab groundwater samples were collected. No fuel-related contaminants were detected in the grab groundwater samples (The Reynolds Group [Reynolds], December 15, 2005). Wells MW-5, MW-6, and MW-7 were last sampled in January 2006. The groundwater results indicated that MTBE was present in downgradient Well MW-5 at a concentration of 125.9 µg/L (Reynolds, February 10, 2006). Based on these concentrations and the results of the direct-push investigation in 2005, OCHCA determined that contaminants in groundwater had been adequately delineated and that concentrations were low enough to meet California's "low threat closure policy" criteria and closed the case (OCHCA, August 7, 2006).

Considering the intervening distance and the relatively low concentrations of fuel-related hydrocarbons in groundwater, it is unlikely that the release at the Schick property has impacted the subject site. Avocet notes, however, that Schick apparently still operates USTs at its property.

5.7.3 Former Shipley Company, LLC, 2631 Michelle Drive

The former Shipley Company, LLC (Shipley) facility at 2631 Michelle Drive is located approximately 0.2 mile north of the subject site. The facility has been used for research and development of specialty electronic materials and for the distribution of products manufactured at another Shipley facility. The facility reportedly operated as a RCRA-permitted hazardous waste storage and treatment facility from the early 1990s to the early 2000s. In 2001, four areas of the property were sampled in connection with the closure of waste treatment and/or storage units operated under Permit-by-Rule. Based on the results of this sampling, OCHCA referred the site to DTSC for further review. DTSC identified ten areas at the property that required further investigation, including several underground features such as a clarifier, a UST for diesel fuel, a spill containment system, underground drainpipe and drainage system, and underground piping associated with a former UST that contained methyl ethyl ketone (MEK). Aboveground items included drum storage areas and various use areas within the buildings at the site. In 2003, a Preliminary Endangerment Assessment was conducted to evaluate the nature and extent of contamination in soil and/or groundwater beneath the property. In brief, soil samples were collected at 68 locations and low concentrations of several VOCs, including acetone, MEK, benzene, toluene, ethylbenzene, and xylenes, were detected in in the upper 5 feet. Groundwater grab samples were collected at nine locations throughout the property; however, no VOCs were

detected, with the exception of one detection of acetone (URS, April 30, 2003). The VOC concentrations in shallow soil beneath the property were determined to be elevated enough to pose a significant risk to potential sensitive receptors, and the property became subject to a Land Use Covenant in 2004. Under the Land Use Covenant, the property is restricted to commercial/industrial use based on the VOCs detected in shallow soil (Shipley Company, LLC, February 2, 2004). Considering the intervening distance and that no significant VOC concentrations were reported in groundwater, it is unlikely that operations at the Shipley property have impacted the subject site.

6.0 CONCLUSIONS

This section presents the conclusions of the Phase I ESA for the subject site in terms of sequentially numbered RECs, CRECs, HRECs, and OEFs, and the potential for vapor encroachment and/or vapor intrusion conditions at the site.

6.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2021) defines RECs as:

> *". . . (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

ASTM (2021) goes on to state that *de minimis* conditions are not RECs and defines *de minimis* conditions as:

> *". . . a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

Based on the subject Phase I ESA and the definition above, Avocet has identified a single REC at the site as follows:

- **REC 1 – Former Degreasers.** Permits issued by SCAQMD in 1980 indicate that Wespercorp, a former occupant, operated two vapor spray degreasers at the site starting in 1980. The permits indicate that both degreasers were permitted for use with 1,1,1-TCA, Freon 113, methylene chloride, or some combination of these three solvents. It is not clear where the two degreasers were located or how long they were used; however, solvent releases from vapor degreasers are common, including via liquid "drag-out" and as heavier than air vapors. Based on the possible presence of organic vapors in the subsurface, Avocet considers the former degreasers a REC.

6.2 CONTROLLED RECS (CRECS)

ASTM (2021) defines a CREC as a REC:

> *". . . affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any CRECs at the subject site.

6.3 HISTORICAL RECS (HRECS)

ASTM (2021) defines an HREC as:

> *". . . a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition."*

Based on the subject Phase I ESA and the definition above, Avocet has not identified any HRECs at the site.

6.4 OTHER ENVIRONMENTAL FEATURES (OEFS)

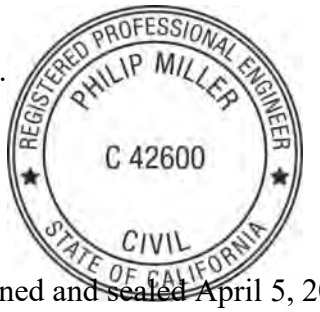
OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may warrant mention in the context of acquiring and redeveloping the site. OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. Based on the subject Phase I ESA, Avocet identified two OEFs at the site, sequentially numbered after the REC, as follows:

- **OEF 2 – Site-Wide POL Use.** Petroleum, oil, and lubricants (POLs) have been used in the workshop since Woodbridge Glass started operating at the site in 2003. The workshop currently features drums and smaller containers of used and fresh cutting oil and lubricating oil for machinery. Drums and smaller storage containers are stored largely with secondary containment, but Avocet did observe a few containers without secondary containment during the walkover survey. Minor staining was observed during Avocet's walkover survey throughout the interior of the workshop, which suggests that periodic, *de minimis* surface spills have occurred. However, there are no indications of larger or more significant spills and none of the surfaces in the vicinity of these areas are unpaved.

- **OEF 3 – ACMs and LBP.** The site was developed in or before 1980, before certain of the restrictions on using asbestos-containing materials (ACMs) and lead-containing materials (LCMs) in construction. That said, the original building has since been extensively remodeled and SCAQMD records indicate at least some ACMs were abated in 2011. Avocet personnel did not observe any obvious hazardous conditions, such as damaged and friable ACMs or damaged LCMs; however, roof penetration mastics and similar materials sometimes contain nonfriable asbestos, and ceramic tile and porcelain plumbing fixtures may contain elevated lead concentrations. Avocet recommends pre-demolition surveys and, if

necessary, abatement for ACMs, LCMs, universal wastes, and other potentially hazardous building materials prior to general building demolition.

6.5 VAPOR INTRUSION/VAPOR ENCROACHMENT



As part of the Phase I ESA, Avocet evaluated the potential presence of a vapor intrusion condition (VIC) and/or vapor encroachment condition (VEC) at the subject site. A VIC can occur if VOCs are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. A VEC can occur if VOCs from an offsite source migrate beneath a property. Given that Wespercorp, a former occupant, operated two vapor spray degreasers at the site, a VIC cannot be ruled out, and as chlorinated solvents were released at the former TCM facility to the southwest, a VEC also cannot be ruled out without soil vapor sampling.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

Philip Miller, P.E.
Principal

Signed and sealed April 5, 2022

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly

known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SHIPLEY COMPANY, LLC Site ID: 0900239 EPA Id: CAD008334260	***2631 MICHELLE DRIVE***	***NNE 1/8 - 1/4 (0.213 mi.)***	***P74***	***464***

Lower Elevation	Address	Direction / Distance	Map ID	Page
RICH HEALTH Site ID: 0901321 EPA Id: CAD040525826	2792 WALNUT AVE.	SSW 1/4 - 1/2 (0.294 mi.)	92	677

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SHIPLEY COMPANY, LLC EPA ID:: CAD008334260	***2631 MICHELLE DRIVE***	***NNE 1/8 - 1/4 (0.213 mi.)***	***P74***	***464***

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 08/23/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 18 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 08/10/2021 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RADAR BOMB SCORING		WSW 1/2 - 1 (0.766 mi.)	U100	793

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TUSTIN MARINE CORPS		SW 1/2 - 1 (0.669 mi.)	0	52

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

SHIPLEY COMPANY, LLC EPA ID:: CAD008334260	***2631 MICHELLE DRIVE***	***NNE 1/8 - 1/4 (0.213 mi.)***	***P74***	***464***

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/20/2021 has revealed that there are 6 Cortese sites within approximately 0.5 miles of the target property.

Violation Description:	Failure to complete and electronically submit hazardous material

WOODBRIDGE GLASS INC (Continued) **S113772323**

inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 05/12/2016. Revise the hazardous materials inventory in the E-Submit portal to include the chemicals listed below. Correct the violation within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 433740
Site Name: WERNER SYSTEMS
Violation Date: 11-23-2015
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes: Returned to compliance on 07/03/2017. OBSERVATION: Hazardous waste is being stored beyond the allowed accumulation time for a small quantity generator (SQG). Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA within 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 433740
Site Name: WERNER SYSTEMS
Violation Date: 09-19-2013
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes: Returned to compliance on 10/15/2013. DTSC records indicate that hazardous waste has not been removed from this site since February 2012. Based on the amount of waste generated at this facility per Jeff and Ricardo, hazardous waste should be removed every 180 days (270 days if transported more than 200 miles). Several full 55 gallon drums of waste were observed on site today. Have the current waste removed by a registered hazardous waste hauler.

Eval Date:	10-20-2015
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Read/review 2015 HMBEP. Rejected: 1) The 2 compressed gases (argon/CO2) should have the "above ambient" box checked for the storage pressure, no "ambient". 2) The sealant/primer is below reportable quantities (55 gallons) and should be removed from the chemical inventory list. Please make these changes and re submit for re evaluation.

Eval General Type:	Other/Unknown
Eval Date:	11-30-2015
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Your HMBEP has been declined, please revise and resubmit within 30 days. The EPA ID# is incorrect. The number that we have on file is CAL000378643. Please verify this and list the corrected number. For all the chemicals in your inventory your average daily amount, it should reflect how much you have on site during an average day, so if you keep your container half full your average daily amount would be 150 gallons. For your maximum daily amount it is the maximum amount of the chemical that you can have on site. So your maximum daily amount should be at least as much as your largest container. Please change your days on site to 365. For your chemical G Acetylene gasG please add the CAS# 74-86-2. For your chemical G ArgonG please change the CAS# to 7440-37-1. For your chemical G Isopropyl alcoholG please add the CAS# 67-63-0. For your chemical G Argon CO2 HeliumG please remove the main CAS# and add the mixture components with their CAS# and percent weight. [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD

TEXAS INSTRUMENTS INCORPORATED (Continued) **1000247345**

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Telephone:	7145082741
Mailing Name:	Not reported
Mailing Address:	14312 FRANKLIN AVE STE 100
Year:	2019
Gepaid:	CAL000292696
TSD EPA ID:	AZR000520304
CA Waste Code:	223 - Unspecified oil-containing waste
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	1.08420
Year:	2019
Gepaid:	CAL000292696
TSD EPA ID:	NVT330010000
CA Waste Code:	352 - Other organic solids
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.20000
Year:	2019
Gepaid:	CAL000292696
TSD EPA ID:	AZR000520304
CA Waste Code:	135 - Unspecified aqueous solution
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	1.22950
Year:	2018
Gepaid:	CAL000292696
TSD EPA ID:	NVT330010000
CA Waste Code:	352 - Other organic solids
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.22935
Year:	2018
Gepaid:	CAL000292696
TSD EPA ID:	AZR000520304

PVP ADVANCED EO SYSTEMS INC (Continued) **S113136598**

CA Waste Code: 135 - Unspecified aqueous solution
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 3.15000

Year: 2018
Gepaid: CAL000292696
TSD EPA ID: AZR000501510
CA Waste Code: 135 - Unspecified aqueous solution
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 1.05000

Year: 2017
Gepaid: CAL000292696
TSD EPA ID: CAD008252405
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.005

Year: 2017
Gepaid: CAL000292696
TSD EPA ID: AZR000501510
CA Waste Code: 135 - Unspecified aqueous solution
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 5.292

Year: 2017
Gepaid: CAL000292696
TSD EPA ID: CAD008364432
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.18

Year: 2017
Gepaid: CAL000292696
TSD EPA ID: NVT330010000
CA Waste Code: 352 - Other organic solids
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 0.1

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca.

N2 IMAGING SYSTEM LLC (Continued) **S118601266**

92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses. However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and checked trash cans at the site. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. Both buildings generate wastes but the EPA ID is tied to 14430 Myford Ave. Observed the following hazardous wastes stored on-site at 14430 above the reportable thresholds alone or when added to the amount stored at 14440 below: Acetone/IPA, 1-5 gallon bucket Grinding Blast Dust, 1-5 gallon bucket and 1-55 gallon drum at collection site. Waste Oily Water, 1-55 gallon drum Oily rags, 1-30 gallon drum Observed a wet grinder with resin chips/debris sitting in a tray at the end of the machine. If this material is considered non-hazardous the practice is acceptable. If the material is considered a hazardous waste and is being transferred to the hazardous waste storage area, then this be [Truncated]

Eval Date: 02-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct a routine hazardous waste inspection. Consent to inspect and take photos if necessary was granted by Patrick Joyce, EH&S. No hazardous waste was observed in the dumpster on this date and no photos were taken. The following were observed stored at 14430 Myford Road: 55-gallon drum of spent coolant + 4 x 5-gallon buckets. The waste containers were observed not properly labeled. 3 x 55-gallon drums of water from the parts washer. Mr. Joyce stated that there is nothing added to the tap water in the process and that the residual is water with plastic particles. He stated that this facility does not have a discharge permit so they have chosen to containerize the waste water for offsite disposal by their hazardous waste transporter. There are two types of EDM machines in use at this facility. One uses oil as a dielectric fluid and the other uses water as a dielectric fluid. Both machine types have filtration systems. An employee in the machine room that [Truncated]

Address:	14272 FRANKLIN AVE
City,State,Zip:	TUSTIN, CA 92780
Site ID:	142450
CERS ID:	10497766
CERS Description:	Chemical Storage Facilities

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-18-2019
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a routine hazardous materials inspection. An inspection of the facility was completed with Julie Swanson. Observed the hazardous materials storage areas. The following reportable hazardous materials were observed today: - Carbon dioxide - Liquid nitrogen - Oxygen - Nitrogen gas - Waste solvent Verified site map locations with map submitted on CERS. The Business Emergency Plan is complete and available. Employee annual training records are complete and current.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Other/Unknown
Eval Date: 03-05-2019
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Based on a review of the California Environmental Reporting System (CERS) Website, this business has failed to complete the submittal for 2018 and 2019. Annual certification of CERS information is due between January 1 and March 1 each year. Please resubmit on CERS: G Every year between January 1 and March 1, AND G Within 30 days of change of ownerships, changes in chemical quantities of over 100%, or any new chemicals above the reporting threshold. G Hazardous materials must be reported if the business handles an amount equal to or greater than 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of compressed gas (1,000 cubic feet threshold for medical gases or gases for which the only health/physical hazards are simple asphyxiation and the release of pressure). As a result, violations have been cited against the facility. If you would like assistance, please email myself at this address and arrange an appointment. Continued failure to submit will [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site and met with Kim Stevenson, HR Manager, and walked through the facility and around the perimeter. The site has significantly downsized since the last inspection was performed. The facility consists of two addresses 14440 and 14430 Myford Road, Irvine, Ca. 92606. I spoke with the business about combining both buildings into one for the purposes of disclosing in the California Environmental Reporting System (CERS). Typically the submittals in CERS are address specific despite the operation of one business at multiple addresses.

N2 IMAGING SYSTEMS LLC (Continued) **S113150841**

However, this size has downsized and there are only two buildings which are very close in proximity. For the purpose of simplicity, one CERS submittal for both buildings will be acceptable. It has been determined by a review of the SDS sheet for the resin/plastic pieces stored on-site, that these are not hazardous and do not need to be reported. Observed the following hazardous materials/wastes stored on-site at 14430 above the [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Other/Unknown
Eval Date: 05-01-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed and decline HMBEP submittal. The following corrections are needed: CHEMICAL INVENTORY Lead Acid Batteries G at 15% sulfuric acid, your battery electrolyte exceeds the threshold planning quantity of 1000 pounds for sulfuric acid, making this material and EHS. You will need to convert all amounts to pounds and check the EHS box under the Chemical Hazard Classification section. Chlorodifluoromethane G physical state and units must match G if the physical state is a gas, report all amounts in cubic feet. Diesel fuel G it is advised that you combine all diesel fuel into one submittal as this AgencyG s fee structure is based upon the number of chemicals disclosed. By reporting the diesel fuel in two separate disclosures, you have moved your facility into the next highest fee category. SITE MAP Please add the location of the following to your map: all building entrances and exits, shut-offs for gas, water and electrical.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 561847
Site Name: Aston Martin Newport Beach (Tustin Shop)
Violation Date: 08-11-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 08/12/2020. The Hazardous Materials Business Emergency Plan (HMBEP) has not been submitted on the CERS portal. Complete the HMBEP on CERS at https://cers.calepa.ca.gov and keep a copy on site.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 07-11-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Read/review pre 2015 HMBEP submission. Accepted pending review of the more recent submission.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-11-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous materials inspection. An inspection of the facility was completed with Kyle Tong. Observed the hazardous materials storage areas. The following reportable hazardous materials were observed today: - Motor oil - Waste oil - Waste antifreeze Reviewed and verified site map item locations.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	hmbep conditionally accepted This submittal is being conditionally approved in order to facilitate transfer of data to California Electronic Reporting System (CERS) database. The facility will need to make the following revisions in CERS following notification of data transfer: Emergency Plan: Please elaborate on your emergency plan and employee training program. This is a crucial component to your submission for emergency first responders and the fire department. Employees should be trained annually and documentation should be kept for 3 years. Facility map: Please resubmit a PDF version of your 2 maps as we are unable to open these files. For further assistance please contact Justin Bechara at jbechara@ochca.com Thank you.

SIC Code:	4214
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff

SCHICK MOVING & STORAGE COMPAN (Continued) **U001577904**

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-08-2012
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: sunny and warm. SWPPP last revised 6/30/2003. Site plan needs to be updated to show relocated 55-gal drum and is missing drainage arrows. Found drain lines from compressor shed; discussed ensuring that blowdown is collected and disposed of. Spill kit found at fuel island. Has a sump pump/well in below-ground level loading dock fitted with a screen; the screen is in need of cleaning. Has an undocumented pipe outlet at NEC of building leaking clear water to ground.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-30-2000
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The SWPPP needs to be updated. I will send an example of SWPPP to David on July 3, 2000. He will mail updates to us by July 14, 2000. Facility is clean over all. Question about oil storage used for cars. No secondary containment but, no real signs of spills.

Address: 2721 MICHELLE DR
City,State,Zip: TUSTIN, CA 92780
Site ID: 401639
CERS ID: 10465447
CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 01-24-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed HMBEP submission package on CERS, DENIED. Request for re-submittal this date. The following corrections are needed: CHEMICAL INVENTORY The Acetylene is below the minimum threshold reporting quantity of 200 cubic feet and should be removed from your disclosure. All CAS numbers must include dashes. Please modify all CAS numbers. In addition to correcting the CAS numbers, please also make the following changes to your submittal: Ethylene = change Hazardous Material Type to Mixture and complete the Mixture Components chart G move the CAS number to the chart; add Ambient to Storage Pressure and Storage Temperature. Motor Oil New G move the CAS number to the Mixture Components Chart (CAS numbers are only for pure substances); also check the box for Acute Health under Federal Hazard Categories; complete the Mixture Components Chart as follows: Hazardous Component = Various Petroleum Oils, add CAS #; WT = 95. Motor Oil Waste G Hazardous Material Type = Waste; [Truncated]

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SHIPLEY COMPANY, LLC (Continued) **1000333198**

Waste Code: D011
Waste Description: SILVER

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

SHIPLEY COMPANY, LLC (Continued) **1000333198**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: U008
Waste Description: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U404
Waste Description: U404

Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

SHIPLEY COMPANY, LLC (Continued) **1000333198**

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: U008
Waste Description: 2-PROPENOIC ACID (I) (OR) ACRYLIC ACID (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U075
Waste Description: DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-

Waste Code: U404
Waste Description: U404

CERS HAZ WASTE:
Name: PLAST-TIES JOHNSTON INTL CORP
Address: 14272 CHAMBERS RD
City,State,Zip: TUSTIN, CA 92780
Site ID: 518828
CERS ID: 10555549
CERS Description: Hazardous Waste Generator

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect granted by Mike Belz. Observed the shop area, waste storage area, perimeter of facility and trash container. Wastes include water based parts washer and universal waste lamps. The person who keeps the hazardous waste manifests is not available today. Submit current manifests to this agency for the parts washer and waste lamps. Complete the emergency response label and post in the facility.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-09-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine inspection. An inspection of the facility was completed with Carlos Contreras. Insta-Pak drums have been removed. One 7 gallon cylinder of propane for the forklift was observed. To remain exempt from the hazardous materials reporting requirements a maximum of only one 7 gallon cylinder of propane is allowed to be stored with no other hazardous materials at or above reporting thresholds stored on site. The hazardous materials program will be inactivated at this time.

Eval Notes:	Plast-Ties Johnston International Corporation 14272 Chambers Rd. Tustin, CA 92780 On site for a routine hazardous materials inspection. Consent to enter and inspect granted by Mike Belz. Observed the hazardous materials storage areas. The following hazardous materials were observed today: - Three 55 gallon drums of Instapak B resin - One 55 gallon drum of Instapak A resin - Two 7 gallon propane tanks for forklift (Approximately 240 cubic feet each) Chapter 6.95 of Division 20 of the California Health and Safety Code (H&SC) and Section 11022 of Title 42 of the United States Code contain the minimum requirements for hazardous material inventory reporting and data management. These regulations require businesses within this jurisdiction to complete a chemical inventory form to disclose hazardous materials stored, used, or handled on site. This disclosure information will assist emergency responders in planning for and handling emergencies involving hazardous [Truncated]

CERS:
Name: II-VI AEROSPACE AND DEFENSE
Address: 14242 CHAMBERS RD
City,State,Zip: TUSTIN, CA 92780
Site ID: 416170
CERS ID: 10563664
CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-19-2021
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This agency received the employee 2021 Hazcom Training signature log and RCRA Hazardous Waste Management certificate. Violation I239 abated. No outstanding violations.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-06-2013
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect granted by Doug Lamb. Observed the shop area, waste storage area, perimeter of facility and trash container. Drums of wastes are covered and labeled. Wastes include cutting coolant, resins, and lab-pack wastes. The person who keeps the manifests is not available today. Submit copies of manifests to this agency for the past 12 months. Complete the emergency response label and post in the facility. Verified the owner as Lightworks.
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-03-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This business is under new ownership.
Eval Division: Orange County Environmental Health
Eval Program: HW

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
